Sampling

Sampling Procedure

Stratified random sampling with probability proportional to facility catchment population. Strata were rural/urban and public/private, with three levels of health facilities: Unit de soins primaires 1 (health post), Unit de soins primaires 2 (clinic), and hpital de district (district hospital, no operating theater).

Two sub-samples were drawn within the facilities from a master list prepared by the interview team using a standard template and methods. The sub-samples were for absence and knowledge.

Deviations from Sample Design

None.

Response Rate

Out of an initial 183 facilities, 180 were surveyed, with five replacements and three losses. A few non-public facilities refused to answer the finances module.

Weighting

Weights are included for facilities, absence, and knowledge data.

Questionnaires

Overview

Four modules were used, with multiple sections under the following themes:

- Module 1: Facility information
- Module 2: Staff roster
- Module 3: Patient case simulations (to measure provider knowledge)
- Module 4: Facility expenditure, resources and governance (not included in public release files)

Data Collection

Data Collection Dates

Start	End	Cycle
2013-09-24	2013-10-18	N/A

Data Collection Mode

Face-to-face [f2f]

Data Processing

Data Editing

Data entry and editing was done with CSPro.

Other Processing

Data sets are harmonized to a common questionnaire and subsequently anonymized. For more information on both procedures, please refer to the technical documents: Note to Users (ReadMe\ReadMe_FR.pdf), Togo Health-20150812.xlsx as well as the SDC report provided as external resources.

Ask to be shown the main location in the facility where medicines and other supplies are stored. Find the person most knowledgeable about storage and management of medicines and supplies in the facility (usually the pharmacist/pharmacy technician). INTRODUCE YOURSELF, EXPLAIN THE PURPOSE OF THE SURVEY AND ASK THE FOLLOWING QUESTIONS. The existence of the stock of drugs and vaccines has to be verified through direct observation. Observe

Enumerator read to the Pharmacist/Pharmacy Technician: I would like to know if the following medicines are available today in this facility. I would also like to observe the medicines that are available. If any of the medicines I mention is stored in another location in the facility, please tell me where in the facility it is stored so I can go there to verify.

Pre question

OBSERVER reads the following to the clinician :

We have come here today as part of our research on health service delivery in Tanzania. The research is conducted by REPOA in collaboration with The World Bank, The Ministry of Health and Social Welfare, and PMO RALG and is part of the government's on-going efforts to improve utilization of resources and quality of services. One of the aims of our research is to identify the possible challenges of health service delivery in Tanzania. We therefore want to kindly ask you to spend some time assisting us in learning more about the daily work that clinicians do. To understand the realities of your work we will be present during some of the daily activities in your facility. In addition it is important to understand how the work could be conducted, this time without the constraints of having patients present during our survey. To achieve this my colleague will pretend to be a patient, and would then ask you to do a consultation on him/her. What I ask from you is simply to pretend that my colleague is one of your normal patients and to treat him/her just like normal.

Permission for the survey has been obtained from the Ministry of Health and PMO RALG [show letter]. All information and responses that you provide will be confidential and no information will be attributed to you personally. The questionnaire will take approximately 40 minutes to complete. Do you have any questions?
