Sampling

Sampling Procedure

The sample design employs a stratified two-stage clustered design. Within each of the 12 strata (6 states, urban and rural), the primary sampling units are enumeration areas (EAs) that were drawn randomly proportional to size. Within EAs, a listing was conducted and 12 household were drawn randomly as unit of observation.

Deviations from Sample Design

EAs were replaced if inaccessibility rendered field work unfeasible. Replacements were approved by the project manager. Replacement of households were approved by the supervisor after a total of three unsuccessful visits of the household.

Weighting

The sampling weight is the inverse probability of selection. The selection probability for a household can be decomposed into the selection probability of the EA and the selection probability of the household within the EA. The selection probability of an EA is calculated as the number of households within the EA divided by the number of households within the stratum multiplied by the number of selected EAs in the stratum estimated using the 2008 Census. The selection probability for a household within an EA is constant across households and is calculated as the number of households selected in the EA over the number of listed households in the EA. Sampling weights were then scaled to equal the number of households per strata using the Census 2008 data. More information can be found in the technical appendix of the South Sudan Poverty Profile 2015.

Questionnaires

Overview

Graphs and Figures Included in the Poverty Profile

Title	Graphs and Figures Included in the Poverty Profile
Country	South Sudan
Language	English

Description	This Excel file gathers the output from the STATA do file 1-6-creatfigures.do, and then uses this raw data to prepare all graphs and tables presented in the South Sudan Household Profile 2015. The 'Raw data' sheets are automatically updated from the STATA do file, all others are interlinked, such that any changes made to the do file will automatically translate into changes in (i) the Figures, (ii) the Tables, and (iii) the linked outputs, i.e. the poverty profile. Thereafter, all Figures included in Poverty Profile.
