# Sampling

## Sampling Procedure

---

L'échantillon de l'EIS-CI est stratifié, représentatif au niveau national et tiré en deux degrés. Les dix anciennes régions administratives regroupant les 19 régions actuelles constituent, avec la ville d'Abidjan, les onze strates géographiques retenues. Ces dernières sont ensuite stratifiées en zones urbaine et rurale pour former les strates d'échantillonnage. La ville d'Abidjan n'ayant qu'une zone urbaine, il y a au total 21 strates d'échantillonnage.

Au premier degré, des Districts de Recensement (DR) ont été tirés dans chaque strate par un tirage systématique avec une probabilité proportionnelle à leur taille (la taille du DR étant le nombre de ménages). La base de sondage utilisée est la liste complète des districts de recensement (DR) obtenus lors du dernier Recensement Général de la Population et de l'Habitat (RGPH) réalisé en Côte d'Ivoire en 1998, par l'Institut National de la Statistique (INS). Compte tenu de l'ancienneté de cette base, une mise à jour complète des DR, tirée au premier degré, a été effectuée. Cette mise à jour a permis d'obtenir une liste de ménages qui a servi de base de sondage pour tirer les ménages au deuxième degré.

Au deuxième degré de tirage, un nombre fixe de ménages a été tiré dans chaque DR d'un nombre de manière systématique à probabilité égale. Un effectif de 20 ménages dans chaque DR a été retenu. Tous les membres des ménages sélectionnés ont été identifiés à l'aide d'un questionnaire ménage. Toutes les femmes et tous les hommes âgés de 15 à 49 ans du ménage ont été enquêtés à l'aide du questionnaire individuel.

Parmi les 4 998 ménages sélectionnés, 4 573 ont été identifiés et 4 368 ont été effectivement enquêtés avec succès.

## Overview

---

Deux questionnaires ont été utilisés : le Questionnaire Ménage et le Questionnaire Individuel.

Le Questionnaire Ménage a été utilisé pour lister tous les membres habituels et les visiteurs des ménages sélectionnés. Un des objectifs essentiels du questionnaire ménage est d'identifier les femmes et les hommes éligibles pour des interviews individuelles et pour le test du VIH/sida. Des informations de base sur les caractéristiques de chaque personne ont été collectées, y compris le lien avec le chef de ménage, l'âge, le sexe, la survie des parents, le niveau d'instruction, la déclaration des naissances l'état civil. Le Questionnaire Ménage a également permis de collecter des informations sur les caractéristiques du ménage, comme la provenance principale de l'eau de boisson, le type de toilettes, le type de matériau du sol et du toit du logement, la possession de certains biens durables, la possession et l'utilisation de moustiquaires, etc. En plus de ces informations, des questions ont été posées par le biais du questionnaire ménage sur la situation des enfants orphelins et vulnérables (OEV) et sur le soutien reçu, etc.

Le Questionnaire Individuel a été utilisé pour collecter des informations sur toutes les femmes et les hommes âgés de 15 à 49 ans. Les questions portent sur des sujets très variés tels que :

- les caractéristiques sociodémographiques des enquêtés ;
- l'historique des naissances, les soins prénatals, pendant l'accouchement et post-partum ;
- le mariage et les activités sexuelles ;
- les connaissances et les attitudes vis-à-vis du VIH/sida et des autres Infections Sexuellement Transmissibles (IST) ;
- les autres problèmes de santé de la reproduction ;
- la mortalité maternelle.
