

TABLE 1

Use this table to select the hh to be interviewed in every village, depending on the number of hh that live in there.

We will admit up to 250 hh per cluster given that segmentation will be rough, and so accidentally more than 200 hh may be present after segmentation.

E.g. If a village has 142 hh refer to column for villages with 141-150 hh to select the 15 hh you need.

Please notice that the 13th number is 144 which is > 142. So you will skip this number and you will use the 16th number provided, namely 75.

This is why you are provided with 24 random numbers in every column, instead of just 15. You will never need more than 24.

| # hh/village: | from: | 11 | 21 | 31 | 41 | 51 | 61 | 71 | 81 | 91 | 101 | 111 | 121 | 131 | 141 | 151 | 161 | 171 | 181 | 191 | 201 | 211 | 221 | 231 | 241 |
