

Endline Data – Description of datasets

- One survey dataset and its' associated rosters are included. See below table to see all relevant rosters and the key to be used to merge these.
- The parent dataset for the survey is: HH_clean_anon.dta with the unique IDs: ID_HH (household-level ID); ID_HHH (individual level ID); and interview__key and interview__id (ID from CAPI to be used to merge rosters)
- In HH_clean_anon, all questions asked to the head do not have a suffix, but questions asked to the spouse have suffix _sp.
