Sampling

Sampling Procedure

The sample of 240 local government units (LGU) was selected by PhilHealth from PCB1-engaged LGUs that are willing to participate in the study. Randomization of LGUs was conducted at the municipality level, stratified at the regional level and then at the provincial level.

Two to three provinces were randomly chosen from each of the 14 regions included in the study. This resulted in 30 provinces, with two provinces each from 12 regions and three provinces each from 2 regions.

In each of the selected provinces, eight LGUs were selected from the list of LGUs with PCB-accredited rural health units (RHU) as of June 2013 provided by PhilHealth. In total, there were 1,120 LGUs with PCB-accredited RHUs nationwide. In provinces with less than eight municipalities/cities with PCB-accredited RHUs, the remaining LGUs were randomly sampled from another province in the same region to add up to 16 LGUs per region, except for Regions VI and VII where a total of 24 LGUs were selected for each region.

During the conduct of the baseline survey, the 240 LGUs were randomly assigned into the four treatment arms, including the control arm, stratified by province. There are therefore 60 LGUs per treatment arm, evenly spread across the regions and provinces. The assignments were only notified to the LGUs and the health facilities after the baseline survey, at the time of the orientation of the study conducted between September and November, 2014. The orientations to LGUs were attended by the Local Chief Executive, the Municipal Health Officer (usually the rural health physician in the main RHU), and the Municipal Accountant. The orientations were given by treatment arm based on treatment-specific manuals, to ensure that there was no contamination.

Questionnaires

Overview

Data was collected in local government units (LGU) and rural health units (RHU) using the following survey instruments and methods:

- Interviews with key informants, including a local chief executive
- interviews with RHU physician
- RHU/health facility survey
- patient chart reviews for selected diseases
- direct observation of clinical management of patients (only in a subset of study sites)
- patient exit survey
- collection of a sample of patient health profiles.

DATA COLLECTION NOTES

The following interventions are designed for the impact evaluation:

- Intervention 1: Direct payment of the professional fees (PF) portion (20%) of the Per Family Payment (PFP) to providers by creating a distinct trust fund for the PF portion and allowing the Municipal Health Officer (MHO)/City Health Officer (CHO) to determine the distribution of funds among personnel contributing to provision of health services particularly included in the PCB1 package.

- Intervention 2: Sharing of information on PCB PFP releases, performance and delivery of services to the Local Chief Executives (LCEs), PCB1 service providers, and the community.

- Intervention 3: Combination of Interventions 1 and 2. Direct payment of the PF portion (20%) of the PFP to providers by creating a distinct Trust fund for the PF portion and allowing the MHO/CHO to determine the distribution of funds among personnel contributing to provision of health services particularly included in the PCB 1 package, and sharing of information on PCB PFP releases, performance and delivery of services to the LCEs, PCB 1 service providers, and the community.
