SERIES INFORMATION

This is the fourth wave of refugee and host community data collection under the RIMA methodology conducted in Uganda.

ABSTRACT

In order to make the progressive Uganda refugees policy successful in the medium- and long-term, the refugees' response needs to facilitate their inclusion in the country's development agenda. No longer focusing exclusively on short-term, life-saving interventions, the response should act as a vector for refugees' integration in the economy; improving the management of land, water, and natural resources; exploiting the socio-economic opportunities associated with the refugees' presence, skills, and development; and strengthening the hosting districts' capacity to absorb and manage these resources. The positive impact would affect refugees, host communities, and hosting districts alike, thus moving towards social and economic integration. In August 2017, FAO was asked by the Commissioner for Refugees (Office of the Prime Minister of Uganda, OPM) to support the implementation of a socio-economic analysis within the refugees' settlements and host communities, with the aim of providing a comprehensive assessment of the current state of the refugees' food security, well-being and resilience. Although refugees in Uganda are given land and mobility rights, their food security remains low, with a high dependency on food aid. The assumption was that by better understanding refugees' preferences and livelihoods strategies which determine their resilience, it would be possible to unlock the development potential of the land, increase productivity and help them achieve independence and self-reliance. The Uganda 2021 Resilience Index Measurement and Analysis (RIMA) measures the food security and resilience of refugees and host communities in 11 Ugandan districts. The survey was administered between December 2021 and January 2022.

Sampling

SAMPLING PROCEDURE

The sampling strategy of the fourth wave was to re-interview all the refugee and host households interviewed in the first wave (between 2017 and 2019) plus the households in the Koboko district visited for the first time in December 2019. The final dataset for the fourth round is composed of 5,636 of which 77 percent (4,343 households) are traceable within the panel) and 23 percents are replacements and new households in the panel.

To construct the panel, refer to the sampling documentation and links to the previous rounds of the data already published on the FAM catalogue. Note that the `uhhidp` variable available in all the rounds links households over time and should be used when constructing the panel.

DATA EDITING

The data were collected through computer-assisted personal interviewing (CAPI) with digital tablets. The use of electronic devices reduces the duration of interviews, limits errors during the interview and data entry phases, and enables the collection of geographic information system (GIS) information at the household level. The data were transmitted daily through Kobo Toolbox, a suite of software tools for data collection in challenging environments, allowing for the use of remote data control protocols.

CONFIDENTIALITY

The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be reported immediately to FAO.

ACCESS CONDITIONS

Micro datasets disseminated by FAO shall only be allowed for research and statistical purposes. Any user which requests access working for a commercial company will not be granted access to any micro dataset regardless of their specified purpose. Users requesting access to any datasets must agree to the following minimal conditions:

- The micro dataset will only be used for statistical and/or research purposes;
- Any results derived from the micro dataset will be used solely for reporting aggregated information, and not for any specific individual entities or data subjects;
- The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be reported immediately to FAO;
- The micro dataset cannot be re-disseminated by users or shared with anyone other than the individuals that are granted

access to the micro dataset by FAO.
