### ABSTRACT

Households in Tajikistan are particularly vulnerable to shocks, such as energy and water supply, climate change, food insecurity and dependence on remittances that predominantly originate in Russia. In May 2015, the World Bank launched a "Listening to Tajikistan" (L2T) survey to understand the severity of shocks on households and monitor their wellbeing over time. Between 1,200 to 2000 households from all regions of Tajikistan participate in the survey every month, through phone interviews. The study follows the same households over time, collecting their personal views and details about how their livelihoods change from one month to the next. The survey focuses on key dimensions of wellbeing – including on remittances, jobs, food security, and services.

## Sampling

### SAMPLING PROCEDURE

Sampling frame: The sampling design uses data from Census 2020. It provides information on census enumeration areas including their unique IDs, number of households, and population.

Methodology: The sampling design employs a stratified two-stage proportional-to-size (PPS) clustered sampling method. This method integrates stratification, PPS sampling, and cluster sampling.
