TITLE
Paddy Farmers Survey 2023

ABBREVIATION OR ACRONYM
SLPFS 2023

COUNTRY/ECONOMY

Name	Country code
Sri Lanka	LKA

STUDY TYPE
Agricultural Survey [ag/oth]

SERIES INFORMATION
Panel data were collected through three surveys: (i) a baseline in October-November 2022, (ii) a midline in October-December 2023, and (iii) an endline in April-May 2024.

ABSTRACT
The Sri Lanka Paddy Farmers Survey 2022-2024 collects panel data on paddy farmers in Sri Lanka, covering comprehensive information on demographics, risk management strategies, agricultural production, market engagement, and food security.

KIND OF DATA
Sample survey data [ssd]

UNIT OF ANALYSIS
Households

Scope

NOTES
- Household Characteristics: Identification and demographic details.
- Food Insecurity
- Farm Land Use and Management: Details on plot characteristics, land preparation, water management, and crop production.
- Fertilizer Acquisition: Information on types and sources of fertilizers used.
- Seed and Planting Material Acquisition: Data on seed types and sources.
- Crop Sales: Details on the sale of crops produced.
- Livestock, Poultry, and Fish Farming: Information on non-crop farming activities.
- Off-Farm Income and Remittances: Data on household income from non-farming sources.
- Loans/Credit/Insurance: Information on financial instruments used by households.
- Agricultural Information and Services: Access to agricultural advice and services.
- Household Assets and Dwelling Characteristics: Assessment of household wealth and living conditions.

Sampling

SAMPLING PROCEDURE

This survey includes 2200 paddy farmers enrolled in 220 farmer organizations in Sri Lanka. The sample is nationally representative of the paddy farmers enrolled in the farmer organizations (more than 90% of the total paddy farmers in the country). The sampling strategy is a multi-stage stratified cluster sampling:
- First Stage: The total of 25 districts in Sri Lanka are stratified based on agro-ecological zones and randomly sampled with a probability proportional to the share of land devoted to paddy fields over the total extent of the district.
- Second Stage: Within each of the 10 sampled districts, farmer organizations are stratified based on irrigation scheme, and then 220 are randomly selected.
- Third Stage: For each farmer organization, paddy farmers are randomly selected with the sampling weight proportional to the number of farmers in each farmer organization. The final stage produces 2200 households in total.

WEIGHTING

Sample weights were calculated for the household data to ensure representativeness and account for the sampling design. The following weighting variables are used:

- First Stage Weight:
Stage 1 Probability = 10/25×Total Districts in Each Zone×(Selected District's Paddy Area (km?^2))/(Total Area (km?^2))

Here, 10/25×Total Districts in Each Zone indicates that 40% of districts are selected within each agro-ecological zone. For instance, if a zone (e.g., Wet Zone) has 5 districts, 2 districts are selected (which is 40%). The selection of specific districts within each zone is weighted by the paddy cultivation area. This means that districts with larger paddy areas have a higher probability of being selected.

- Second Stage Weight:
Stage 2 Probability = 25/(Total FO in Each District)×Total FO in Each Strata in Each District×(Members in Sampled FO)/(Total Members in FO within District)×22/25

Here, 25/(Total FO in Each District) represents the target of selecting 25 Farmer Organizations (FOs) within each district (oversampled the FO because the list that was given to us is not updated). The FOs are further stratified by irrigation type (e.g., rainfed, minor, and major irrigation schemes), and a proportionate share of FOs is selected from each stratum. For example, in each district, if 7.2% of FOs should come from each stratum, this percentage guides the selection process within the strata. Within each stratum, FOs with a higher number of members are given a greater probability of being selected. This ensures that the sampling reflects the distribution of member sizes across FOs. There is 220 FO sampled altogether.

- Third Stage Weight:
Stage 3 Probability = 11/(Members in Sampled FO)×10/11

We use 3 FO as replacement and select only 22 FO to sample in this stage. The third stage involves selecting individual members (farmers) from each sampled FO. The probability here is straightforward: selecting 11 members out of the total members in each sampled FO. But only 10 have been interviewed and 1 HH per FO is used for replacement purpose. This stage ensures that the selection of individual farmers is representative of the FO’s membership size. There are 2200 members (i.e., farming HHs) selected altogether from 220 FOs.

- Final Weight:

Final weight at HH-Level =1/(Stage 1 Probability × Stage 2 Probability × Stage 3 Probability)

The sum of these final weights at the HH-level is 2.8 million, which almost equal to 1.8 million, i.e., total paddy farmer population in Sri Lanka.

Data collection

DATES OF DATA COLLECTION

Start	End	Cycle
2023-10	2023-12	Midline

DATA COLLECTION MODE
Computer Assisted Personal Interview [capi]

DATA COLLECTION NOTES
During the data collection for the survey on Sri Lanka Paddy Farmers Survey 2022-2024, enumerators underwent a thorough training process that included familiarization with the survey tools and methods. Interviews were conducted in a manner that emphasized consistency and neutrality, and on average, each interview took approximately 120 minutes. Supervisors played a critical role in ensuring data quality by reviewing completed questionnaires and addressing any issues encountered in the field. Corrective actions were taken when necessary, including the rejection of incomplete questionnaires and the need for re-interviews.

DATA COLLECTORS

Hector Kobbekaduwa Agrarian Research and Training Institute (Sri Lanka)

questionnaires

QUESTIONNAIRES
The data collection process for the Sri Lanka Paddy Farmers Survey 2022-2024 involved a comprehensive Household Survey Questionnaire, meticulously crafted by the Environmental and Water Resources Management Division of HARTI in collaboration with FAO. Drawing from previous surveys, the questionnaire was specifically tailored to meet the project's objectives. The design process included stakeholder consultations, ensuring that all relevant topics, such as household demographics, land use, crop management, and income, were comprehensively addressed.

data_processing

DATA EDITING
The microdata files for the Sri Lanka Paddy Farmers Survey 2022-2024 were carefully processed to ensure they met several critical data quality and privacy standards. Specifically, the files were stripped of any variables that could directly identify a data subject, such as names, phone numbers, ID numbers, addresses, or geo-references. Sensitive information that could potentially cause harm, such as HIV status, was also excluded. All categorical variables were properly labeled, and missing values were clearly coded and labeled. Each dataset included a unique identifier or a combination of variables that uniquely identified every record. Numerical variables were checked to ensure they fell within realistic thresholds, and any variables with all missing values were removed. Additionally, if the dataset had a hierarchical structure, the relationships between datasets were clarified with unique identification variables to facilitate accurate data merging. If any weighting factors were required but missing, an explanation was provided along with guidance on the appropriate use of the dataset.

Access policy

CONFIDENTIALITY
The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be

reported immediately to FAO.

ACCESS CONDITIONS

Micro datasets disseminated by FAO shall only be allowed for research and statistical purposes. Any user which requests access working for a commercial company will not be granted access to any micro dataset regardless of their specified purpose. Users requesting access to any datasets must agree to the following minimal conditions:
- The micro dataset will only be used for statistical and/or research purposes;
- Any results derived from the micro dataset will be used solely for reporting aggregated information, and not for any specific individual entities or data subjects;
- The users shall not take any action with the purpose of identifying any individual entity (i.e. person, household, enterprise, etc.) in the micro dataset(s). If such a disclosure is made inadvertently, no use will be made of the information, and it will be reported immediately to FAO;
- The micro dataset cannot be re-disseminated by users or shared with anyone other than the individuals that are granted access to the micro dataset by FAO.

Disclaimer and copyrights

DISCLAIMER

The user of the data acknowledges that the original collector of the data, the authorized distributor of the data, and the relevant funding agency bear no responsibility for use of the data or for interpretations or inferences based upon such uses.

CATEGORIES

Value	Category	Cases	
As it allows the high emergence of weed growth they do not prefer applying organic fertilizer.		1	0.6%
Because farmer do not cultivate any crop		1	0.6%
Cultivated land trainure out.		1	0.6%
Didn't cultivate any crop		1	0.6%
Didn't cultivate, tenure out land		1	0.6%
Do not give priority to organic fertilizer.		1	0.6%
Due to the sloppy land, soil erosion is very high		1	0.6%
Farmer didn't cultivate any land within the reference period.		1	0.6%
Farmer didn't cultivates		1	0.6%
Farmer have compost which were already taken From ASC freely.		1	0.6%

Goyam kahapata wee Goyam wlta roga athi unu bawa anith farmersla danum deema		1	0.6%
Has not cultivated		1	0.6%
He Wasn't cultivate 2022Maha and 2023 Yala season in0.5acre paddy land		1	0.6%
He could'nt involve with cultivation practices because he face to bypass - surgery. So he did'nt need to buy organic fertilizers.		1	0.6%
He didn' cultivate any paddy land and didn' use fertilzers for his other cultivations.		1	0.6%
He didn't apply fertilizer		2	1.1%
He didn't apply fertilizer within reference period.		1	0.6%
He didn't apply organic fertilizer		1	0.6%
He didn't cultivate		1	0.6%
He didn't cultivate because he faced an accident, therefore now he couln't cultivate		1	0.6%
He didn't cultivate paddy lands in previous Yala and Maha season. And he applied urea only for his Maize cultivation in previous Maha		1	0.6%
He didn't use any fertilizers		1	0.6%
He didn't use any fertilizers for coconut		1	0.6%
He didn't use organic fertilizer		3	1.7%
He didn't use organic fertilizers		8	4.4%
He don't have interest about usage of organic fertilizer.		1	0.6%
He hadn't cultivate any land.		1	0.6%
He hadn't cultivated lowland and upland.		1	0.6%
He hasn't any land to cultivation.		1	0.6%
He tenure out his paddy land.		1	0.6%
He used only fishtonic		1	0.6%
His opinion is that crops are success with chemical fertilizers so he didn't use organic fertilizers in that reference period		1	0.6%
In off seasons cows are allowed in the land which fertilizers the soil as well.		1	0.6%
It is a slopy land so, he didn't use compost fertilizer		1	0.6%
It's not much efficient than chemical fertilizer.		1	0.6%
Land was tenure out, But the fertilizer is taken from Agricultural Service Center in his name(amount is not known)		1	0.6%
Land was tenure out.		1	0.6%
Need high amount of organic fertilizer for his land.		1	0.6%
No available in near place		1	0.6%
No cultivation lands.		1	0.6%
No need any fertilizer		1	0.6%
No need of fertilizer cause he tenure out his paddy lands to others.		1	0.6%
No result		1	0.6%
No use		1	0.6%
Not Received		2	1.1%
Not available		2	1.1%
Not cultivate		2	1.1%

Not cultivated 2023 yala and 2022 maha seasons.		1	0.6%
Not cultivated paddy land		1	0.6%
Not doing Cultivations		1	0.6%
Not effective		1	0.6%
Not enough organic fertilizer to apply the wholeland that he owns.		1	0.6%
Not giving much priority to organic fertilizers.		1	0.6%
Not in need.		1	0.6%
Not interested in applying organic fertilizer		1	0.6%
Not needed in high quantity. Other people cows are allowed in the field in off seasons.		1	0.6%
Not needed, Not given much attention to organic fertilizer.		1	0.6%
Not preferred		3	1.7%
Not preferred and not available		1	0.6%
Not preferred.		1	0.6%
Not received		1	0.6%
Not suitable for his land.		1	0.6%
Only used Gliricidia green manure for pepper cultivation.		1	0.6%
Oragnic compost not available		1	0.6%
Organic fertilizer (compost) received from the government.		1	0.6%
Organic fertilizer is wash out due to high rainfall		1	0.6%
Organic fertilizer not used		1	0.6%
Other people cows are allowed on the land in off seasons to fertilize the soil.		1	0.6%
Paddy land is tenourout land, and she doesn't cultivate any considerable crop in home garden. So she doesn't apply any fertilzer.		1	0.6%
Paddy land was tener out		1	0.6%
Paddy lands were not cultivated by him.		1	0.6%
Placing cows in off season to fertilize the soil		1	0.6%
She didn't cultivated any land in this time period so no need fertilizer		1	0.6%
She didn't cultivate the paddy or any other field crops she only cultivated perennial crops.		1	0.6%
She doesn't cultivate crops commercially yet. Paddy land is not cultivated yet during 2023/2024 maha season. Therefore she didn' t buy any chemical or organic fertilizer from market. But it will be cultivated. Therefore, she is willing to receive fertiliz		1	0.6%
She has no lands for agriculture.		1	0.6%
She is not used.		1	0.6%
She's not cultivating anything.		1	0.6%
Their paddy lands are tenure out and they didn't buy or receive any fertilizer		1	0.6%
They did not cultivate their lands. So they don't need organic fertilizers.		1	0.6%
They didn't cultivated paddy land and they didn't use organic fertilizer for rubber land		1	0.6%
They didn't use any fertilizer		1	0.6%
They didn't use organic fertilizer		1	0.6%
They didn't use organic fertilizers.		1	0.6%

They do not do farming anymore.		1	0.6%
They don't apply cowdung as directly. After the harvesting period they allow cows in to their fields upto next cultivation.		1	0.6%
They don't like to use organic fertiliser for betel cultivation..		1	0.6%
They haven't any crop production lands		1	0.6%
They usually apply once in 3 to 4 years interval.		1	0.6%
Used only chemical fertilizer		1	0.6%
Usually the do not apply organic fertilizer		1	0.6%
Within a limited cost inorganic fertilizer has high efficiency and labour cost also low.		1	0.6%
allowing cattles to grazing in their land		1	0.6%
applied paddy straw only		1	0.6%
apply chemical fertiliser only		1	0.6%
because organic fertilizer not provide much yield.		1	0.6%
cultivation land is tenure out		1	0.6%
didn't use		1	0.6%
difficulties in getting large amounts of fertilizer		1	0.6%
difficulties in transportation and application		1	0.6%
difficulty in getting large quantity		1	0.6%
don't have time to produce organic fertlizer		1	0.6%
freely given by asc		1	0.6%
hasn't cultivated		1	0.6%
he didn't use organic fertilizer		1	0.6%
he didn't do cultivation. he tenure out his land		1	0.6%
he didn't use because not much yield production		1	0.6%
he didn't use it because of low production		1	0.6%
he didn't use organic fertilizer		1	0.6%
he didn't use organic fertilizer because if doesn't give much yield.		1	0.6%
he didn't use organic fertilizer because it doesn't give more yield		1	0.6%
he didn't use organic fertilizer because no any sources to produce and not much money to purchase		1	0.6%
he didn't use organic fertilizer currently because difficult to collect		1	0.6%
he doesn't use it because it doesn't give more yield		1	0.6%
he don't have raw materials for preparation so he didn't use that.		1	0.6%
he got free from asc		1	0.6%
he has already purchased organic fertilizer in stocks. so he didn't bought.		1	0.6%
high cost and difficulty in transportation		1	0.6%
high cost for transportation of fertiliser from shop to the home		1	0.6%
high quantity need		1	0.6%
higher weed emerging		2	1.1%
in paddy lands he applied paddy straw only		1	0.6%

insufficient raw materials for production so he didn't use that.		1	0.6%
land tenure out		1	0.6%
larger quantity is need and difficulties in transportation		1	0.6%
less yield		2	1.1%
lowland land is tenured out.		1	0.6%
need larger quantity of fertilizer		1	0.6%
no		1	0.6%
not available in market		1	0.6%
not aware about it		1	0.6%
not conducting farming activities		1	0.6%
not cultivate		4	2.2%
not cultivated		1	0.6%
not doing cultivation		1	0.6%
not engage in farming		1	0.6%
not enough raw materials for production		1	0.6%
not in quality		1	0.6%
not interested		1	0.6%
not received organic fertiliser subsidy		1	0.6%
she didn't cultivate in 2022 maha season & in Yala season cultivated sesame but no addition of fertiliser.		1	0.6%
she's not doing cultivation		1	0.6%
some amount of organic fertilizer was given by apc in past times they stored and they produced little amount by them self also		1	0.6%
take long time to answer		1	0.6%
they allow cattle for grazing in their land		1	0.6%
they are only doing coconut		1	0.6%
they didn't use for field		1	0.6%
they didn't want purchase the organic fertilizer . they belive that, chemical ifertilizer is good . it is enough. they utilise own prepared organic fertilizer (livestock wastes).		1	0.6%
they get from asc freely		1	0.6%
they getting cow dung from neighbours without paying money		1	0.6%
they getting from their animal husbandry		1	0.6%
they producing themselves		1	0.6%
they using their animal waste to their field		1	0.6%
they usually didn't apply organic fertilizer and need large quantity		1	0.6%
they usually didn't use any organic fertilizer		1	0.6%
use chemical fertiliser only		1	0.6%
use paddy straw only		1	0.6%
use paddy straw which remained after harvesting in the previous season		1	0.6%
using crop residues in from their land		1	0.6%

usually didn't practice his cultivation with organic fertilizer		1	0.6%
