SERIES INFORMATION

This study assess the impact of the Empowerment Pilot, a school-based safe-space program delivered to secondary school students in Zambia. The main question it aims to answer is whether the Empowerment Pilot decreases adolescents' experience of SRGBV, improves attitudes and norms around gender roles and SRGBV, and increases socio-emotional skills and well-being. We collect school-level data from a school survey in 2023 at the start of the intervention, and one round of adolescent-level data, teacher-level data, and attendance extraction 2 months after the intervention was delivered.

ABSTRACT

School-related gender-based violence (SRGBV) remains widespread in low- and middle- income countries, yet rigorous evidence on effective prevention strategies is limited. This study evaluates the Empowerment Pilot, a multi-component program designed to address SRGBV in Zambian secondary schools. Employing a mixed-methods approach, we draw on quantitative data from a cluster randomized controlled trial involving over 4,467 students across 90 schools, alongside qualitative research. We find that violence is prevalent, gendered, and normalized in schools. While the program increased student discussions about violence and yielded modest improvements in boys' gender attitudes, these shifts did not translate into meaningful reductions in overall violence. Implementation challenges and limited diffusion beyond club participants further limited program impact. The study highlights significant institutional and cultural barriers to reducing SRGBV and underscores the need for comprehensive, school-wide strategies that strengthen accountability and address underlying social norms perpetuating violence in resource-constrained contexts.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

- Adolescents
- Teacher level and school level data is used for secondary analysis

Version

VERSION NOTES

- Key variables are school level and individual characteristics; and primary outcomes such as school violence, attitudes, school climate, and well-being.
- This dataset contains many violence related variables - including emotional, physical and sexual, from teachers and peers, in the past term or past 2 weeks.

Scope

NOTES

The survey covered the following topics:

School

- Infrastructure
- Access to other interventions
- Number of teachers in 2023 school year
- Attendance for term 1 of the 2023 school year

Adolescent

- Adolescent identification
- Demographic characteristics
- Health/ disability
- Education
- Agency and aspirations
- Knowledge of SRGBV
- Socio-emotional skills
- School climate
- Social norms and attitudes
- Reporting vignette
- Psychosocial and socio-emotional well-being
- School related gender based violence
- Girls/ boys clubs

Teacher

- Teacher identification
- Demographic characteristics
- Knowledge of SRGBV
- School climate
- Social norms and attitudes
- School related gender based violence
- Girls/ boys clubs

Coverage

GEOGRAPHIC COVERAGE

Data from 90 secondary schools from Kasama, Mpongwe, and Zambezi districts in Zambia

Sampling

SAMPLING PROCEDURE

The study includes 90 secondary schools, from which 45 were randomized to control and 45 to treatment. Quantitative data collection included a school survey and listing exercise (not included in the package) conducted at the start of the implementation period followed by adolescent, attendance extraction, and teacher surveys administered four months after the intervention concluded. A listing exercise was conducted to identify the student sample for the adolescent survey. To generate the sample frame, we first extracted data from class attendance registers at the start of the study to compile a list

of all students enrolled in grades 8 to 11. The impact evaluation was designed to measure the effect of the EP on the average student in study schools, rather than the impact on club participants specifically. Therefore, from each participating school, we randomly selected 25 boys and 25 girls, resulting in a random sample of 4,467 adolescents, about 20 percent of whom were KGS girls. In cases where a student was unavailable during the survey (about 30 percent of sampled students), enumerators referred to a ranked replacement list to interview an alternative boy or girl student from the same school. All remaining KGS girls not selected through random sampling were also surveyed, bringing the total sample size to over 6,100 students. To create a sample of teachers, we used convenience sampling to select one teacher from each grade between grades 8 to 12, for a total target sample size of 450 teachers.

RESPONSE RATE

A total of 5481 students were ultimately interviewed and form the total sample size for the dataset. 417 teachers were ultimately interviewed.

Data collection

DATES OF DATA COLLECTION

Start	End
2023-05-01	2024-03-30

DATA COLLECTION MODE

Face-to-face [f2f]

Questionnaires

QUESTIONNAIRES

School questionnaire - Administered to principals in May 2023, and collects data on school characteristics and student populations

Attendance questionnaire - Administrative tool used to extract attendance numbers from registers for the sample (March 2024)

Adolescent questionnaire - Administered to adolescents, and collects data on characteristics, traits, attitudes, and experience of violence (March 2024)

Teacher questionnaire - Administered to teachers, and collects data on characteristics, attitudes, and school violence (March 2024)
