ABSTRACT

The Food and Agriculture Organization of the United Nations (FAO) has developed a monitoring system in 26 food crisis countries to better understand the impacts of various shocks on agricultural livelihoods, food security, and local value chains. The Monitoring System consists of primary data collected from households on a periodic basis (more or less every four months, depending on seasonality). FAO launched a sixth-round survey in Mali between 21 September and 17 October 2023. It reached 1490 households through Computer-Assisted Telephone Interviews (CATI) to monitor agricultural livelihoods and food security. Data were collected across nine regions: Gao, Kayes, Kidal Koulikoro, Ménaka, Mopti, Ségou, Sikasso, and Tombouctou. The targeted number of respondents was reached in all regions except for Kidal where only 51 percent of the targeted households were interviewed.

Scope

NOTES

The survey collected information on:

- HOUSEHOLD : household information
- INCOME SOURCES, SHOCKS : income changes, shocks experienced by households
- CROP PRODUCTION : crops planted, area planted, area harvested, crop production difficulties
- CROP MARKETING : crop sale difficulties, crop sale price
- LIVESTOCK PRODUCTION : types of livestock present on holding, number of livestock, livestock production difficulties
- LIVESTOCK MARKETING : livestock sale, livestock sale difficulties, livestock sale price
- FISHERIES PRODUCTION : fish activity, comparison of fish production
- FISHERIES MARKETING : fish sale, fish sale difficulties, fish sale price
- FOOD SECURITY AND CONSUMPTION : food consumption, food utilization, coping strategies
- NEEDS ASSISTANCE : open questions on the needs for assistance

Sampling

SAMPLING PROCEDURE

This sixth-round survey reached 1490 households through Computer-Assisted Telephone Interviews (CATI). Data were collected across nine regions: Gao, Kayes, Kidal Koulikoro, Ménaka, Mopti, Ségou, Sikasso, and Tombouctou. The targeted number of respondents was reached in all regions except for Kidal where only 51 percent of the targeted households were interviewed. The survey is representative at the regional level and the sampling plan was designed with a 10 percent margin of error.

WEIGHTING

A standard weighting approach is used, though the specific combination of weights depends on factors such as subgroup quotas, availability of baseline data, and appropriate context-specific wealth indicators. Specifically, weights were applied based on population size, the percentage of agricultural households and wealth indicators (access to toilets and level of education), at administrative level 1.

DATA EDITING

The datasets have been edited and processed for analysis by the Food and Agriculture Organization of the United Nations, Data in Emergencies (DIEM) Hub at the Office of Emergencies and Resilience, with some dashboards and visualizations produced. For more information, see <https://data-in-emergencies.fao.org/pages/countries>.

STATISTICAL DISCLOSURE CONTROL (SDC)

The dataset was anonymized by the Food and Agriculture Organization of the United Nations, Data in Emergencies (DIEM) Hub and reviewed by the Statistics Division, using Statistical Disclosure methods in accordance with FAO Corporate Statistical Disclosure Control Protocol. All direct identifiers have been removed prior to data submission. For more information, see
