ABSTRACT  
Student data collected through a survey for the purpose of mapping actual and potential travel routes to all colleges in students' admission choice set. Full survey was conducted in January-April 2016, and it was collected on 3948 male and female students from eight colleges at Delhi University. Short survey collected data on 799 male and female students across 32 other colleges at DU.

## Scope

---

NOTES  
The dataset includes survey responses from Delhi University students, collected in 2016 for the Safety First project. It comprises detailed data from 3,948 students across eight colleges and a shorter survey from 32 other colleges. The survey covers demographics, travel patterns, academic performance, household characteristics, and female students' experiences with harassment.

## Sampling

### SAMPLING PROCEDURE

The sampling procedure is choice-based, as the data come from students who selected and attended eight specific colleges at Delhi University. While the complete choice set of colleges is known, data are unavailable for students who chose other institutions, potentially introducing selection bias. The sample includes a mix of colleges representing DU's geographic and quality distribution. To address potential bias, the study applies a mixed logit model with alternative-specific intercepts and corrects for choice-based sampling using established econometric methods. Robustness checks indicate that selection effects do not drive the main findings.

### RESPONSE RATE

There was a 100 percent response rate for the surveys, but 204 students (5.2 percent) did not complete the survey, leaving missing some information on residential location and high school exam scores.

## Data collection

### DATES OF DATA COLLECTION

Start	End
2016-01	2016-04

### DATA COLLECTION MODE

Face-to-face paper and pen interview [papi]

### DATA COLLECTION NOTES

The full survey was conducted in a required class with permission from the principal at a time that was previously scheduled with the professors but unknown to the students. Short survey data was collected through a combination of online (34 percent) and intercept (66 percent) surveys.
