# Sampling

## Sampling Procedure

---

First, five districts, broadly representative of the country as a whole, were selected. These districts were Moshi, Kwimba, Lushoto, Makete, and Nzega. Within these study districts, TASAF officials were asked to provide 20 villages in which Vulnerable Groups (VG) applications had moved through the submission process to the point at which they were ready to be funded, but had not yet received any money. Thus while the districts that form the study are in some general sense representative, the sample of villages was selected based on the following criterion: being at a specific stage in the VG application process. Within the 100 study villages, researchers interviewed every household using a short listing survey, providing a census of 61,611 households.

Each household was then sorted into one of the following strata:

- Village elites (Village Executive Office and the village chairman),
- Ineligible households (i.e. households with no vulnerable individuals as defined by TASAF),
- Eligible non-beneficiaries (households with at least one vulnerable individual but not benefitting from any VG sub-projects),
- VG Beneficiaries (households with at least one vulnerable individual and benefitting from a VG sub-project). This group was further stratified into two groups:
  - 1) VG group leaders (chairperson, secretary, and treasurer, who hold signatory power over group accounts),
  - 2) VG "rank and file" members (the rest of the group conducting the proposed income generating activity - with no signatory powers over the group accounts).

Within each village, a short listing survey was given to every household. A long listing survey was given to all village elites, all households with vulnerable members (including VG beneficiaries and eligible non-beneficiaries - 38,871 households in total), and to a randomly selected sample of ineligible households.

In each of the 100 villages, a household survey was conducted with the two village elites, the three group leaders from each TASAF II group, three randomly sampled "rank and file" members from each TASAF II group, three randomly sampled households from all "eligible non-beneficiaries" in each village, and three randomly selected households from all "ineligible" households in each village. Hence, in a typical village with one TASAF II group funded to run an income generating activity, the sample size was 14. There were 1,544 households that completed the household survey in the 100 villages.

# Questionnaires

## Overview

---

The following survey instruments were used in the study:

1) Short listing survey.

Within each village, a short listing survey was given to every household. The short listing survey collected basic demographic information about the household (e.g. household size and age of the eldest household members), GPS data, and determined whether or not the household contained a vulnerable member.

2) Long listing survey.

The long listing survey collected more detailed data, including household amenities, characteristics of the household head, holdings of assets, and basic consumption data.

3) Household Questionnaire - "HH QX TASAF II Impact Evaluation".

The household survey contained detailed consumption data at the household level, limited consumption data at the individual level, as well as collecting information on distance to the village center, the education of the household head, asset ownership, participation in village meetings, whether household members hold political office in the village, and blood relationships between household memberships and village elites.

#### Literal question

Do you, or anyone else in your household, own a functioning [ASSET]?

#### Interviewer instructions

## Do you, or anyone else in your household, own a functioning [ASSET]? (T5BQ1a)

File: HHAsset\_public

For each item listed, indicate whether someone in the household owns one of the listed items ('yes' or 'no'). Make sure to ask EACH individual item and not let the respondent simply list which assets he/she thinks they have. Also, you should ask about the more luxury items, such as cars, even if you think they do not own it. You can always tell the respondent that you are asking those questions to everybody in the village, and that it is your job to do so in order to be consistent for each household.

Make sure you ask whether or not the respondent or anyone in the household owns the item. This is important as it is easy to slip into the habit of asking 'you' rather than 'you or anyone else in the household' (as it conforms more closely to natural conversational phrasing). Stick to the formulation 'you or anyone else in the household' to avoid confusion.

Asking 'you' may be interpreted by the respondent as meaning 'his/her self' not the household.

People who belong to several households (e.g. a polygamist head of household with another wife and household somewhere else) will own assets that do not belong to the household you are interviewing. E.g. do not count this person's furniture in the other household as belonging to the household you are interviewing, but DO count a mobile phone that he carries with him or a motorbike that he uses to visit both households. The rule should be that anything that remains in the other household is not eligible for inclusion in the asset section of the questionnaire, but anything that clearly transfers between households can be included.

Note that a 'functioning' need to be 'functioning' in order to be considered as owned asset. For instance, do not consider a car that has been standing still in the garage for several years because it does not function anymore.

However, in case an asset is temporarily not functioning (for instance a cell-phone that is at the fundi at the moment), you should consider it.

Specific asset instructions:

- Radio: Emphasize that also small radio's are considered
- Clock: Emphasize that also watches are considered
- Television: it is having the UNIT itself that is meant here, NOT whether this unit has SIGNAL or not.

### Pre question

Enabled if there is at least one child of age below 5 years in the household.  
 FIRST ANSWER QUESTION 1 ON THIS FORM, BEFORE MOVING ON TO FORM T4a FOR EACH OF THE CHILDREN BELOW 5 YEARS OLD IN THE HOUSEHOLD. FORM T4b SHOULD ONLY BE COMPLETED AT THE END OF THE INTERVIEW AND ONLY IF 1) IT IS A TASAF HOUSEHOLD AND IF 2) THE CHILD IS OLDER THAN 6 MONTHS OLD AND YOUNGER THAN 5 YEARS OLD. IF A SUB-FORM T4b IS REQUIRED TO BE COMPLETED, IT WILL HAVE AN ASTERIX ALONG THE SIDE ON FORM T4.  
 The questions in this sections should preferably be asked to the MAIN carer of the child. In case there is more than 1 respondent in this section, select the main respondent to this section.

### Literal question

What is [NAME]'s birth date? DAY

### Interviewer instructions

In the RARE case you don't know the exact day, you should enter '-99'. It is VERY important, however, that you do your very best to make the respondent remember the day of birth.

### Literal question

What is [NAME]'s birth date? MONTH

### Interviewer instructions

In the VERY RARE case the respondent does not know the exact month, select DK. You should do your VERY best to make the respondent remember, however. A comment MUST be made in case the respondent really does not know, and a valid reason must be given in this case.

### Literal question

What is [NAME]'s birth date? YEAR

### Interviewer instructions

Note that there is NO DK option for this response field. The reason why is because it is VERY important that we know the year of birth and since it is maximum 5 years ago, it is impossible that the respondent cannot remember.

### Literal question

At what interest rate was this loan? IN %

### Interviewer instructions

Enter interest rate in %, but do NOT enter the % sign itself, this is written in the box next to the entry field. It may be that the respondent does not know the exact interest rate and that he/she can only tell you the amount he/she is/was supposed to pay back. In that case, you should calculate yourself from the given information the interest rate. Note that if A is the amount borrowed and B is the amount that the household had to pay back later, the interest rate =  $[(B/A)]*100$ . For instance, if a person borrowed 10.000 TSH and he/she had to return 11.000 after 1 year, the interest rate was  $[(11.000-10.000)/10.000]*100= 10 \%$ .

Language of interview

### Interviewer instructions

The language recorded here is that used by the interviewer and not the one used by the interpreter. If an interviewer can speak the local language it is better that he/she translates, since he is in a better position to translate correctly the demand of the question. When interpreters are used to translate and convey the question in a different language then the language used is SWAHILI.

### Literal question

What material are the walls of this house made of?

### Interviewer instructions

If there is more than one type of material used for walls, the interviewer will record the main one. If there is not a significant main one, the interviewer will record the one of highest value. You do not need to ask this question if it is obvious by looking around. But if, for example, the walls are plastered you need to ask what material is behind the plaster. If the material behind the plaster is of higher value, you should choose the higher value one.

In case the walls of the dwelling seem to be build out of grass, you should figure out which material supports the grass and select that material in the list. It can not be that grass stands on its own, so the response cannot be 'grass'. You will notice that in Moshi there is a unique type of building walls materials. There is a kind of bricks that look strong but not baked. They are sliced out of naturally compacted gravel. This type of walls should be classified under 'burnt brick', i.e. code [3].

### Literal question

What is the tenure status of the main residence?

### Post question

READ ALL RESPONSES

### Interviewer instructions

Read all responses here. Also, in case the household owns the dwelling, but not the area, the question should still be 'yes', since we are interested in the tenure status of the residence. We are NOT interested in who exactly owns the place if this is not the household members themselves. In case the household lives for free in the household owned by another relative that does not live in the household, you should select [5].

## How many rooms are used by this household, also including sittingroom? (T5AQ5)

File: HHDData\_public

### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-20

Valid cases: 1544  
Invalid: 0

### Literal question

How many rooms are used by this household? (excluding bathroom, toilet, store and kitchen)

### Interviewer instructions

Excluding the bathroom, toilet, kitchen and store, the question gathers information about the number of rooms in the house that the household can occupy. However, if the HH only has one room in which they do everything (cooking, sleeping, etc.), enter '1'. Do NOT enter 0 because of excluding bathroom/kitchen etc. in this case. Only in the very rare case of the HH being nomads and not having a house at all, enter '0', though a comment MUST be made in this case.

## What is the HH's main source of drinking water throughout the year? (T5AQ6)

### Overview

Type: Discrete

Decimals: 0  
Range: 1-99

Valid cases: 1544  
Invalid: 0

### Literal question

What is the HH's main source of drinking water throughout the year?

### Interviewer instructions

If more than one source of drinking water is used, only the main one will be recorded. If the household uses a different drinking source in different seasons, then use that source that they use the most days in a year. Note that a spring (chemichemi) is water that naturally springs from the ground, while a well (kisima) is dug to reach the ground water table level. A chemichemi can be dug a little to improve water collection, but that does not make it a kisima. In case the response is 'tinga tinga', the response option [9] should be selected.

## What is the main type of toilet used by this HH? (T5AQ7)

File: HHDData\_public

### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 1-99

Valid cases: 1544  
Invalid: 0

### Literal question

What is the main type of toilet used by this HH?

### Interviewer instructions

First ask whether the household HAS a toilet, yes or no. If the answer is 'no', select 'none'. Only if they say 'yes', you should ask them which type of toilet.

A flush toilet is one in which water carries the waste down pipes. A pit latrine refers to a pit dug into the earth. There are two types of pit latrines. 'shimo lililofunikwa' is a pit latrine which is covered (you cannot look inside). 'shimo lisilofunikwa' is a pit latrine that is not covered. There may be planks/boards to support the feet, but they only serve as support and not to cover the hole. A covered pit latrine does NOT mean that it has fences behind which people hide themselves while using the toilet. If the respondent answers that they use the bush, the fields, or a cleared corner of the compound, the interviewer will record "None". If the household uses more than one toilet, take the most frequently used one. In case the household member(s) is/are present at the moment of your visit, do NOT ask whether you can go and have a look at the toilet to verify. Only in case the HH members are not present, you can go and have a look in case the toilet is OUTSIDE the house and in public domain.

## What is the main source of energy used for lighting? (T5AQ8)

### Literal question

What is the main source of energy used for lighting?

### Interviewer instructions

If more than one, take the most frequently used. If they say that they are using a lamp, you need to ask them which energy source they are using in order to lit the lamp. Always choose the highest value option in the list that applies. For instance, if the household uses a generator, you should select option [4], even if the generator charges a battery first.

### Literal question

What is the total area you own? AREA UNIT

### Interviewer instructions

You will find that some respondents are not familiar with units of area measurement such as hectares or acres. If you feel the respondent is not comfortable with these units then do not force him/her to use them. Rather ask him/her to indicate the size by comparing to (i) a football field (which is around 1 acre, but do check that the local football field is standard) or (ii) anything else that can be shown to you and from which you could make an area estimate yourself. Your supervisor will train you on estimating plot sizes. Once you have established the first plot size you can use this to calculate the others as a multiple of them. E.g. The 'plot close to John's house' is 2 times bigger than the 'plot in the valley'.

During the last 12 months, did you try to borrow from someone outside the household or from an institution and were turned down?

### Interviewer instructions

The emphasis of this question is on being TURNED DOWN. Hence, this question is also asked if the household states in question 2 to have borrowed money, since we are interested whether there maybe has been another attempt to borrow for which the HH was turned down.

## MINIMUM amount neighbour has to pay in 1 month from today (T5KQ5)

File: HHDData\_public

### Literal question

What is the MINIMUM amount the neighbour has to pay you one month from today so that you would prefer to be paid in one month rather than receiving 10,000 TSH today?

### Interviewer instructions

This question asks about the MINIMUM amount. This question is also asked to respondents that preferred 12,000 in month from now for question 1, because it might be that they would even accept less than 12,000 in one month time. Double ticking the field will enter 12,000. If the respondent first agrees in question 1 to have 12,000 today but then tells you in question 5 that the minimum is amount greater than 12,000 (hence, inconsistent answers), you need to ask him "You answered that you would accept 12,000 TSH one month from now instead of 10,000 TSH today. Are you sure that the minimum you would accept is XXX TSH?". If the respondent sticks to his/her answer, you just move on. Otherwise, you change the entry. The same for inconsistent answers between Q4 and Q5.

### Interviewer instructions

Select 'none' in case there is no second.

In case the HH's activity is gathering products in free nature for selling, for instance grass, select 'other' and specify this activity. This is NOT business, nor is it selling crops. Business are only those activities in which the HH buys product and re-sells them (often after adding value to it).

|                  | Standard deviation: 4.5 |

#### Literal question

How many [LIVESTOCK TYPE] does the HH own TODAY?

#### Interviewer instructions

This question is only about OWNERSHIP. That is, we do not mean POSSESSION. The difference between ownership and possession is that one can be in the possession of a livestock while he/she does NOT own it, hence the livestock should NOT be considered in this question.

Note that this also includes livestock OWNED at another location than at the dwelling of the household. Do not count chicks as chickens, but do count calves as cows. The reason is that a chick has too large a chance of dying.

## Age of [NAME] at last birthday (in completed years)? (T3Q4)

### File: HHMember\_public

Age is among the most important pieces of information for this survey as many of the questions in each section depend on the age of the listed household member. If the respondent does not know his/her age, you must make an estimate by reference to the events that have taken place in his life or that of the community (village, town, district, region) or the world, such as the independence of Tanzania, a flood in the region, the war with Iddi Amin, or the World Wars. Intensive probing is required to obtain the complete date, month and year of birth. Often respondents will refer to refer events such as:

- Community events/weather conditions
- Religious occasions/holidays
- Public holidays e.g. Independence Day, Union Day, Idd-el-Fitr, Idd ul Hajj, Maulid Christmas, Easter, New Years
- Regional disasters
- Birth intervals
- World events e.g. World War I, II
- The famine that occurred in Tanzania after World War II, in 1946 and 1947.
- National independence in 1961.
- The birth of TANU.

Interviewers in the past projects conducted by EDI Ltd have suggested these additional questions in order to estimate the age of household members:

- Ask when the household member got married, and then add the age of the oldest child to the age of the parent when s/he was married. (However, if the oldest child was born several years before or after the marriage, this method can lead to large errors, so you should probe how long after marriage they got children)
- Compare the age of the household's child with that of a neighbour's child, an age-mate, or playmate.
- Establish the dates of specific events in a given location where the interview takes place and ask how old the member was when the events occurred.

Age must be recorded in full years which the household member has lived since his/her birth. For a child who has not completed 12 month (365 days) you record 0 year. If someone will be 25 years old in two weeks after the date of interview, the recorded age would be 24.

To check if you have recorded the age properly try to compare the age of the parent and that of the first child and see if make sense. When we were testing one of our questionnaires we found a mother with difference of 10yrs to her first daughter that was strange and we had to probe more to discover she was not her biological mother. Age will give you a lot of information which you will be using to prove the answers you getting from the responded.

## Is this person a member of a TASAF group? (T3Q5)

Decimals: 0  
Range: 1-99

Valid cases: 7989  
Invalid: 0

### Literal question

What is the relationship of [NAME] to the head of the household?

### Interviewer instructions

This question solicits the social relationship that the person shares with the head of household. Indicate from the list the person's relationship to the head of household. The person listed in the first row in the roster should always be 'head' since the head of the household should always be listed in the first row, regardless of whether or not the head is present at the time of interview. Other members should be identified in one of the other categories listed. The wife/husband is the married or unmarried partner of the head. Members of the household who are not related to the head will be coded "non-relative". Particular care must be taken in recording relationship information when the respondent is someone other than the head of the household; clarification must be made to the respondent that we are interested in the relationship of the person to the head of the household, not to the respondent.

### Literal question

What is the relationship of [NAME] to the TASAF group member?

### Interviewer instructions

Only consider TASAF members as defined in the roster (for instance, it might be that the household claims to have a TASAF member while this person was not confirmed to be a member during village information confirmation. Such persons should NOT be considered a member). If more than one TASAF member take main member as defined by HH. In case there is not really a main member, take the relationship to head that is ranked highest in the response list (hence, lowest code).

## What is [NAME]'s marital status? (T3AQ3)

File: HHMember\_public

PRESENT MARITAL STATUS is the marital status on the day of the interview. You must read each category to the respondent; otherwise he/she will reply, for example, that he is a bachelor instead of divorced or separated. MARRIED includes all types of marriage (for example, civil, traditional or common law).

- The category informal union will include all household members who live as husband and wife but they are not legally recognized as husband and wife.
- The category Divorced will include all household members who have signed the legal divorce paper and they do not live together anymore.
- The category separated will include all household members who have been living together as husband and wife, but they do not live together anymore due to some misunderstanding, but they have not signed the divorce papers.
- There is no term for widower (a man who has lost his wife) in Kiswahili. Both widows and widowers should be in a category MJANE.

### Literal question

For how long was [NAME] absent during the last 12 months?

## For how long was [NAME] absent during the last 12 months? (T3AQ6)

File: HHMember\_public

### Interviewer instructions

Record the number of months [NAME] was away for out of the last 12 months. For example if the interview is conducted in the beginning of March 2008, then you should ask how many months from March 2007 to february 2008 [NAME] was ABSENT from the household. Do not confuse this with being present in the household, you should ask the number of months [NAME] was NOT there.

The time spent, does not need to be consecutive, it is CUMMULATIVE time that matters. You should add up all the months that [NAME] slept and ate in the dwelling and assess whether it is under or above 6 months. Continuing with the same example as above, imagine [NAME] moved into the household in beginning of May 2007 and then stayed till September 2007 (5 months). He then left the household in October 2007, but returned for the whole of January and february 2008. To summarise, [NAME] was:

- Absent from the household in March, April, October, November, December (5 months).

- Present in the household in May, June, July, August, September, January, February (7 months).

Thus we would choose option 2 "away for 6 months or less".

Another example is someone who visits the household every weekend of the year. This means they are absent for 5 out of every 7 days in the year, which adds up to be more than 6 months. Someone who visits 3 out of 7 days is absent for more than 6 months, but someone who visits for 4 out of 7 days is absent for less than 6 months.

### Literal question

For which level was the last examination that [NAME] took?

### Interviewer instructions

Note that this question only asks about the LAST examination the person took. Make sure the respondent considers the last one, and not a previous one (even if he/she obtained a higher score on the previous one). Teachers grade 'A' certificate is NOT a national examination. If the respondent took the Standard VIII examination long time ago, you should select 'standard VII', since this is the current equivalent to the former Standard VIII degree (does no longer exist now).

### Pre question

This section only applies to households with a member belonging to a (sampled) TASAF group in the village (maximum of 3 TASAF groups sampled per village). That is HH's in strata 2-7 (and possibly also stratum 1 if the HH has a TASAF member). Within those households, the personal consumption questions are ONLY asked to 1) TASAF members (of sampled TASAF groups in village) and to 2) household members meeting the NARROW VG criteria of ANY of the (sampled) TASAF groups (maximum of 3 groups sampled) in the village. If the household does not belong to strata {2-7}, no names are listed and section T6G should be entirely skipped. Otherwise, complete form T6GA for each person listed.

#### Pre question

This section only applies to households with a member belonging to a (sampled) TASAF group in the village (maximum of 3 TASAF groups sampled per village). That is HH's in strata 2-7 (and possibly also stratum 1 if the HH has a TASAF member). Within those households, the personal consumption questions are ONLY asked to 1) TASAF members (of sampled TASAF groups in village) and to 2) household members meeting the NARROW VG criteria of ANY of the (sampled) TASAF groups (maximum of 3 groups sampled) in the village. If the household does not belong to strata {2-7}, no names are listed and section T6G should be entirely skipped. Otherwise, complete form T6GA for each person listed.

#### Pre question

FOR EACH SHOCK LISTED (cf. Shock code), CHECK 'yes' OR 'no' DEPENDING ON WHETHER THE HOUSEHOLD EXPERIENCED THE SHOCK OR NOT. ONCE YOU HAVE GONE THROUGH THE LIST, RANK THE 3 MOST SEVERE SHOCKS ( DO NOT RANK MORE THAN 3 SHOCKS). FOR EACH OF THESE 3 SHOCKS, YOU NEED TO ENTER MORE DETAILED INFORMATION ON FORM T5GA.

#### Literal question

In the past 5 years, did you experience any of the following shocks causing a significant reduction in your HH's income/assets?

#### Interviewer instructions

Before the start of this section, you should give them a reference point of until when the 5 years period goes back. Do NOT consider shocks that happened BEFORE the period, even if the household still feels the consequences now. SHOCK is defined by SUDDEN situation, different from usual. Also, SHOCK is different from CONSEQUENCES OF SHOCK. For instance, HUNGER is NOT a shock, but a consequence. When respondent says 'yes', repeat to him 'within five years?'. We suggest you to note down the description of the shock that the respondent gives associated to this question in the Windows Journal, so you can use this description later for the ranking question Q2 in that section. That is, you should use the descriptions to summarize the shocks before asking the respondent to rank them. It is important to note that a shock may only be reported ONCE. Also, be alert when the respondent answer is 'yes'. Based on the description he/she gives to this shock, you should decide yourself in which category the shock belongs. You should select 'no' if there is no 'other' shock, for all other 1, other 2 and other 3.

ONCE YOU HAVE GONE THROUGH THE LIST, RANK THE 3 MOST SEVERE SHOCKS ( DO NOT RANK MORE THAN 3 SHOCKS). FOR EACH OF THESE 3 SHOCKS, YOU NEED TO ENTER MORE DETAILED INFORMATION ON FORM T5GA.

Select rank only if shock is one of the 3 most severe shocks the HH experienced.

### Literal question

Please rank the 3 most significant shocks you experienced

### Interviewer instructions

Note that this question should be asked, AFTER you have summarized all shocks the household experienced. You should ask the respondent to rank the 3 most severe shocks out of all those experienced shocks. You should NOT delete the ones that are not ranked among the 3 most severe.

If there was only 1 shock, you do not have to ask this question out loud, but you should select 'Most severe'.

For this question, you should go to your notes in the Windows Journal made while asking question 1 in this section. You should summarize the shocks first, by use of these descriptions written down by you in Windows Journal.

## How widely spread was this shock? It affected... (T5GAQ1)

### File: HHShock\_public

This question means "did it ONLY hit your own household DIRECTLY, or did it also have a DIRECT negative ECONOMIC impact on other households?" It does NOT mean whether other households were also somehow INDIRECTLY affected by the shock that only hit one household, because of the shock's consequences, such as emotionally. For instance, if a household member died, it is very unlikely that this affected other households in the village in a non-emotional way. In case the respondent answers 'all households in the village', you should ask him/her "in which way", to make sure that the question was well understood.
