INTRODUCTION

The Financial Literacy survey is part of a World Bank Financial Governance/Consumer Protection in Financial Services Program in ECCU5 Countries. The Program aims to improve the levels of consumer protection and financial literacy in these countries—and thereby strengthen consumer confidence in the financial sectors. To this end the World Bank commissioned to the Alpha Research a baseline national representative survey. The objective of the study is to assess the level of financial literacy and consumer confidence of households and to outline the peculiarities in different target groups prior to the implementation of the action plan for increasing the financial literacy of the general population and in particular of the low-income groups.

The fieldwork was accomplished in the period 17-25 May 2010 in Bulgaria. A total of 1432 respondents from a general population (18+) were interviewed in their homes. Additional booster sample of 186 youth aged 16-17 was implemented.

The questionnaire is based on the model Financial literacy survey questionnaire used in Romania in order to achieve comparison of the results between the countries.

The graphs and tables included in the report are based on the data, collected by the Financial Literacy survey in Bulgaria. In the cases where comparisons are made with other surveys, the source is duly referenced.

The views expressed herein are those of Alpha Research experts and can therefore in no way be taken to reflect the official opinion of the World Bank.

The report is structured in two main parts and 3 Annexes:

- Part one is methodological and has two chapters – Methodological approach and research activities; Socio-demographic structure of the sample.
- Part two presents the survey results in six chapters: Level of confidence in the financial sector; Awareness and Consumer rights in the use of Financial Products; Financial literacy; Household Financial management; Interest and use of financial products. Chapter six summarizes the Key findings and Recommendations.
- Annex 1 – Survey questionnaire.
- Annex 2 – Frequencies of the survey questions – results from the main sample and from the booster (age 16-17).
- Annex 3 – cross-tabulations of all the questions by socio-demographic profile of the respondents.

I. PART ONE: METHODOLOGICAL REPORT

1. METHODOLOGICAL APPROACH AND RELEVANT ACTIONS

Following methodological approach and actions were taken in the implementation of the Financial Literacy Survey:

1.1 Preparation of the survey questionnaire

- The questionnaire is based on the model Financial Literacy Survey questionnaire used in Romania in order to achieve comparison of the results between the countries.
- Questions from previous surveys on financial literacy issues conducted in Bulgaria have been included in the questionnaire as well. This allows comparison of the survey results with those of previous studies.
- The questionnaire was reviewed with the relevant institutions – Bulgarian National Bank, Ministry of Economy, Energy and Tourism, World Bank.

1.2 Definition of sample size and sample frame

2.1. Sample size: based on statistical calculations in order to obtain max. standard deviation +/- 2.5% .

- Main sample - 1500 respondents general population
- Booster – 300 respondents 16-17 years old

2.2. Sample frame: random, two-staged stratified sample with probability, proportional to the size of the location. The sample include both urban and rural areas and is based on two stratification criteria:

- NUTS region (6 regions – North-West, North-Central, North-East, South-West, South-Central, South-East)
- Type of location (5 groups – Capital; Regional center with more than 100000 citizens, Regional center with less than 100000 citizens, Small town, Village)

1.3 Implementation of the sampling procedure

- All NUTS regions in Bulgaria have been ranged in descending order according to the size of the population.
- At the first stage the sample was distributed proportionally on the size of population in each of the 30 (6 NUTS X 5 type of location groups) strata different from zero.
- A cumulative column with the number of locations in each region was prepared. This cumulative column is used for defining the number of the sample points at the second stage of the sample and respectively – the number of the respondents in each location (proportionally to its' size).
- The sample step was calculated according to the following formula: Sample step = Number of population in the region (N) divided on the number of respondents in the sample.
- A random starting number was defined.
- A number of 10 respondents in each sample nest have been set in order to minimize the influence of correlation error within the sample nest. The largest locations include a higher number of sample nests.
- The number of sample nests and the number of respondents in each location have been defined, proportionally to their size.
- At a second-stage, using the random selection based on the “last birthday in the household”, the respondents were selected within each sample point.
- The sample is representative for the adult population (18+).
- Additional sample booster of young people (16-17 years old) was prepared according to the same criteria.

1.4 Development of training materials, delivery of trainings for supervisors and interviewers. Conducting a pilot survey.

- The team was been given a special briefing session before the beginning of the study. They were acquainted with the survey objectives and tasks, the instruction for conducting the interview and the peculiarities of the questionnaire's structure.
- 15 pilot interviews were conducted in order to test how the questionnaire would work in a local environment. Average length of the interview: 60 minutes. The shortest interview was 40 minutes and the longest - 90 minutes.
- The general observations from the pilot test were:
 - The questionnaire was twice longer than the 30 minutes length pointed out in the TOR.
 - There were long options that required repeat of question. The suggestion was to use a show card with the possible answers that could be shown to the respondents.

1.5 Fieldwork/Interviewing process

- The fieldwork was conducted by the team of 75 interviewers from Alpha Research. The average number of interviews per interviewer was 21.
- The fieldwork manager in the head office in Sofia was in permanent contact with the regional supervisors. There were no significant difficulties during the survey fieldwork.
- The interviews were conducted face-to-face at respondents' homes during the following time schedule:
 - On weekdays – between 9.00 – 12.00h and 17:30 - 20:30h
 - During the weekend – between 10:00 - 20:00h
 - The average length of one interview was 55 minutes
- A total number of 1800 respondents were reached and 1618 interviews were conducted:
 - Main sample: total number of 1500 respondents were reached and 1432 were conducted:
 - ✓ Response rate – 95%
 - ✓ Refusal rate - 5%
 - ✓ *Main reason for refusals: the length of interview*
 - Booster sample of young citizens aged 16 – 17 y.o.: total number of 300 respondents were reached and 186 interviews were conducted:
 - ✓ Response rate – 62%
 - ✓ Refusal rate – 38%
 - ✓ *Main reason for refusals: the subject of the survey*

1.6 Quality control and logic check

- The supervisors' team did quality control on the interviewers' work from the head office in Sofia. 20% (325 respondents) of the total sample were back checked by phone:
 - 295 respondents were contacted personally and confirmed that they were interviewed.
 - 30 respondents were not available at the time of control, but another member of the household confirmed that the interview was conducted.
- Consistence and logic check on all completed questionnaires was carried out by the central office staff.
- No weighting procedures were applied.

1.7 Creation of the required software and instructions for data entering. Entering and cleaning data and preparation of clean data file (SPSS) for the main sample and for the booster.

1.8 Preparation of Preliminary Technical Report.

1.9 Preparation of Key Findings Report and Presentation of the survey results (power point format) for the Dissemination Workshop.

2. SOCIO-DEMOGRAPHIC STRUCTURE OF THE SAMPLE

The sample designed and implemented by Alpha Research for the purposes of the Financial Literacy Survey ensures the national representativeness of the general population. The surveyed population has a similar pattern to the national demographic status. The sample structure reproduces the structure of the population in Bulgaria done by the census data of the National Statistical Institute (NSI).

Table: Socio-demographic structure of the sample

		Type of residence								Total	
		Sofia		Regional center		Smaller town		Village		Count	Col %
		Count	Col %	Count	Col %	Count	Col %	Count	Col %		
Gender	Male	123	45,7%	235	48,6%	131	47,5%	193	47,9%	682	47,6%

	North West	-	-	66	13,6%	53	19,2%	65	16,1%	184	12,8%
Total		269	100,0%	484	100,0%	276	100,0%	403	100,0%	1432	100,0%

Having in mind the peculiarities of the socio-demographic structure of the Bulgarian population and respectively, of the surveyed sample, the following characteristics should be taken into consideration:

- The women slightly outnumber the men (52%:48%).
- 72% of the country's population lives in the urban area: one-fifth in the capital city and another 34% in the regional centers.
- The most densely populated NUTS is the Southwest (includes the capital), where a little over a quarter of the country's population resides. The regions with the least population density are the Northeast and the Northwest, which according to the NSI data are also the regions with the least developed economy and the highest unemployment rates.
- 26% of the population are people over 60, mostly residing in the small towns and villages. The young age groups are predominant in the capital and the large cities, while the middle-aged – in the regional centers.
- The biggest part of the population (48%) has secondary education; every third citizen has only basic. The lower level of education is the most widespread among the elder people living in the villages and especially the ethnic minorities; 95% of the Roma have basic or lower education. People with higher education form about one-fifth of the country's population.
- The main ethnic group is the Bulgarian (84%). The Turks are 10% and the Roma around 4%. Both minority groups and the Roma in particular have lower educational, social and economic status.

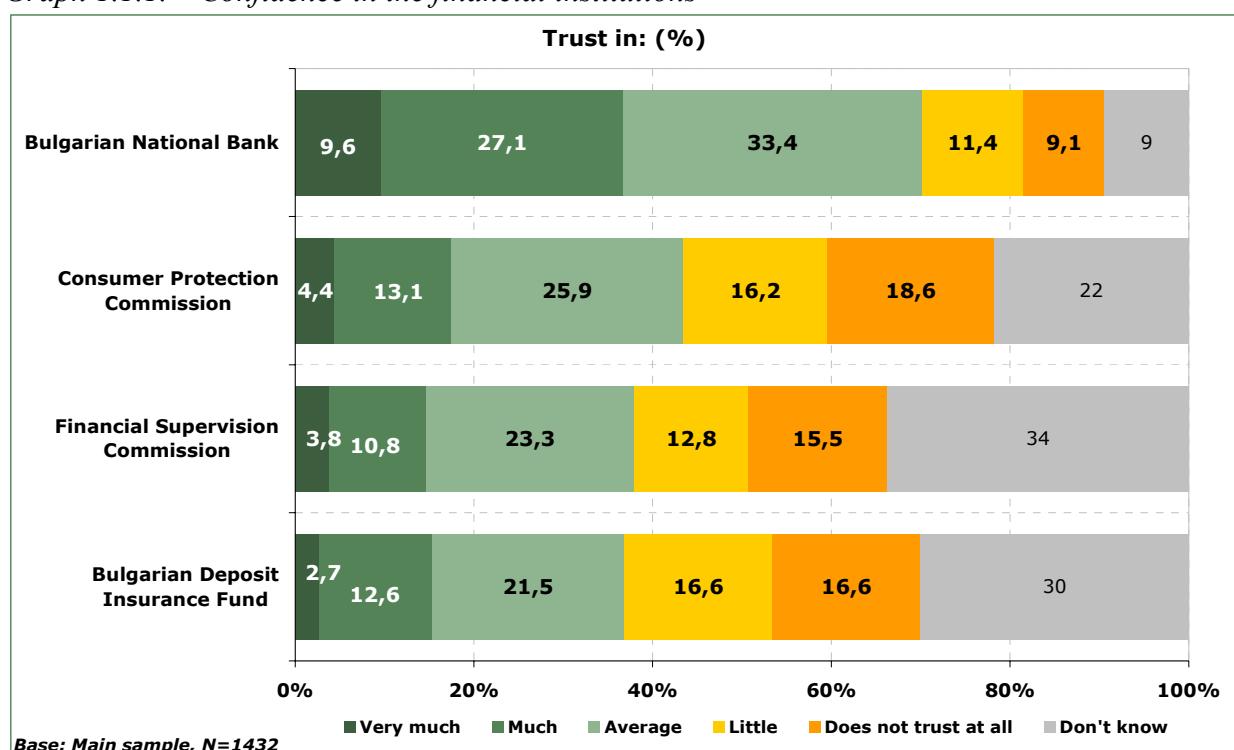

II. PART TWO: ANALYSIS OF THE SURVEY RESULTS

1. LEVEL OF CONFIDENCE IN THE FINANCIAL SECTOR

1.1. Confidence in the public institutions related with the financial sector

The Bulgarian citizens trust “moderately” the main regulatory public institutions in the financial sector. Traditionally, the trust in the oldest Bulgarian financial institution Bulgarian National Bank (BNB) is the highest. Only for this institution the trust (37%) outweighs the distrust (20%). For the rest of the institutions – Financial Supervision Commission (FSC), Commission for Consumer Protection (CCP) and the Bulgarian Deposit Insurance Fund (BDIF) the negative (approx. 28-35%) and the neutral (22-26%) opinions dominate. The positive ones do not exceed 15-17%. (See Graph 1.1.1.)

Graph 1.1.1. – Confidence in the financial institutions

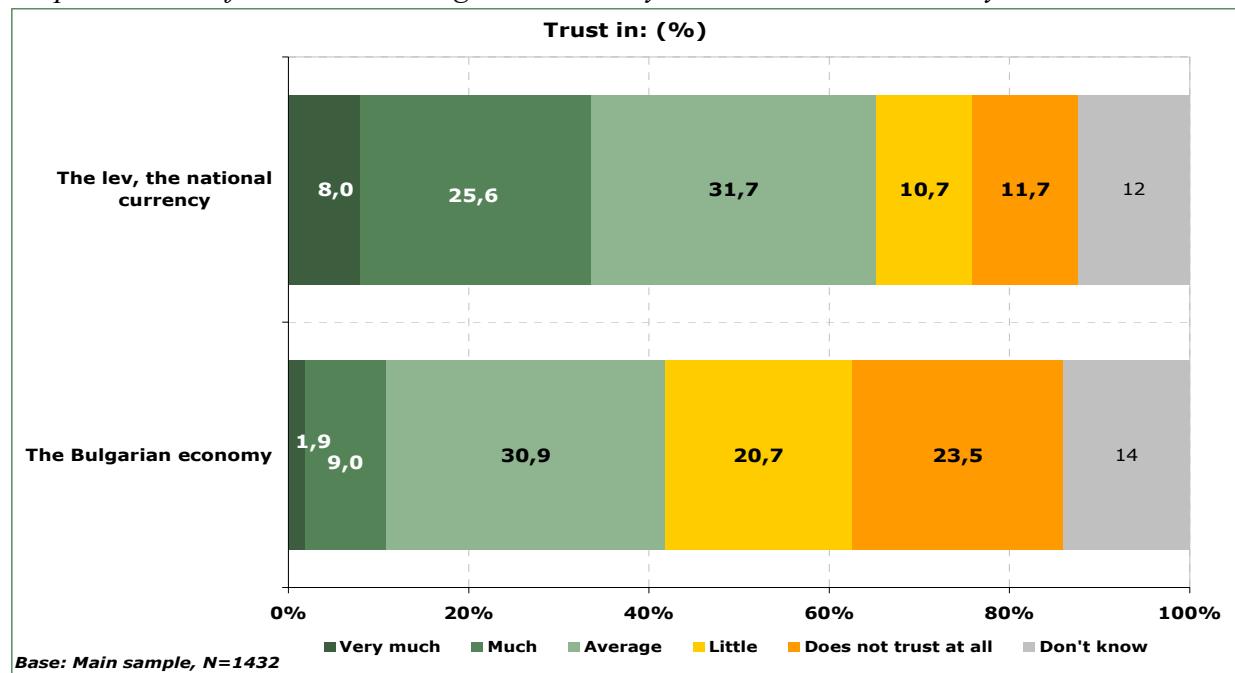

The young people (16-17) have lower level of distrust to the institutions, than the skepticism characteristic of the elderly. They, however, are characterized by a very high level of unawareness of the public regulatory bodies in the financial sector. With the exception of BNB, the remaining institutions are unfamiliar to some 60% of them.

The most knowledgeable of the work of those institutions are the residents of the capital city, people with higher education, free-lancers and people with higher income. In the same time parts of these social groups are more critical to the performance of the regulatory institutions, in particular FSC and CCP.

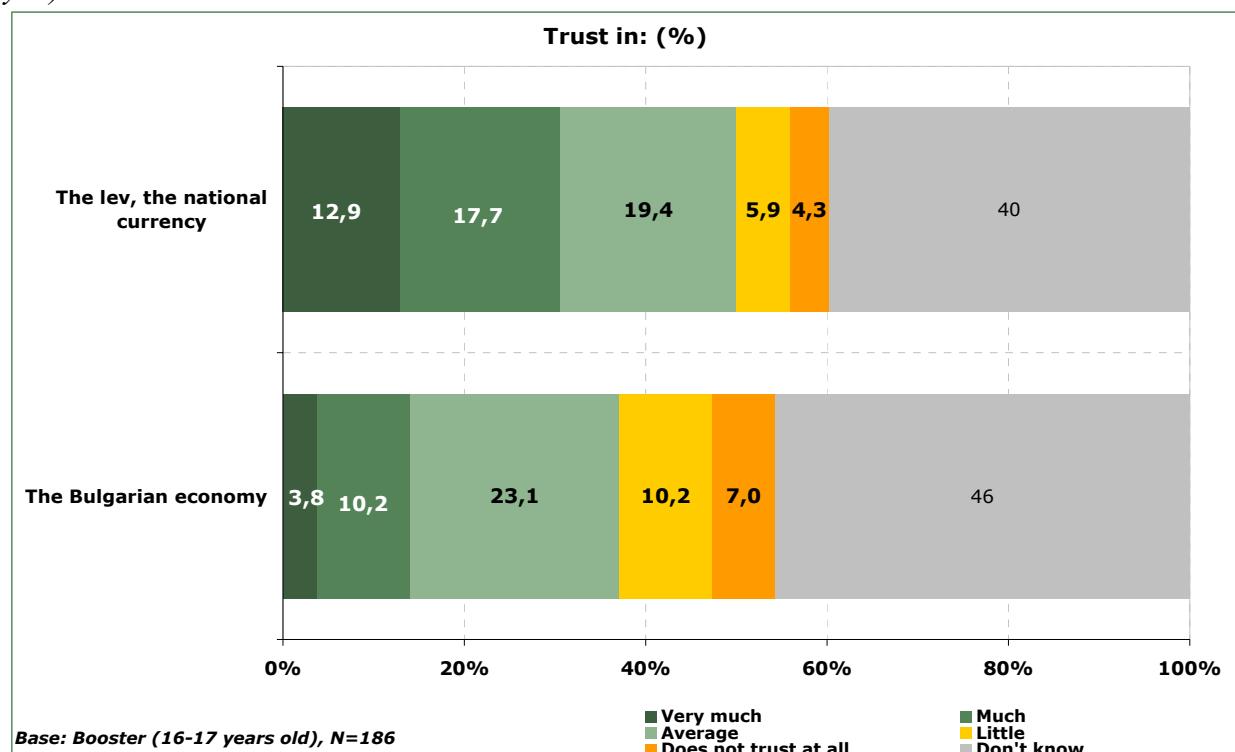

Very interesting result of the survey is the discrepancy between the /non/confidence in the Bulgarian economy and the confidence in the Bulgarian national currency (lev). The distrust prevails in the public attitude to the economy (44%:11%). Nevertheless, the confidence in the stability of the lev, that most probably derives from the trust and support of the Currency Board in Bulgaria, remain high (34% trust versus 22% distrust). No social group displays an explicit distrust to the national currency. (See Graph 1.1.2.)

Graph 1.1.2. Confidence in the Bulgarian economy and the national currency

Among the young the trend is similar. The difference is that they are less pessimistic about the economy and even grater optimist about the stability of the lev (31% positive versus just 10% negative opinions). However, the proportion of those who cannot express an opinion remains high (40-45%). (See Graph 1.1.3.)

Graph 1.1.3. Confidence in the Bulgarian economy and the national currency (booster: 16-17 y.o.)

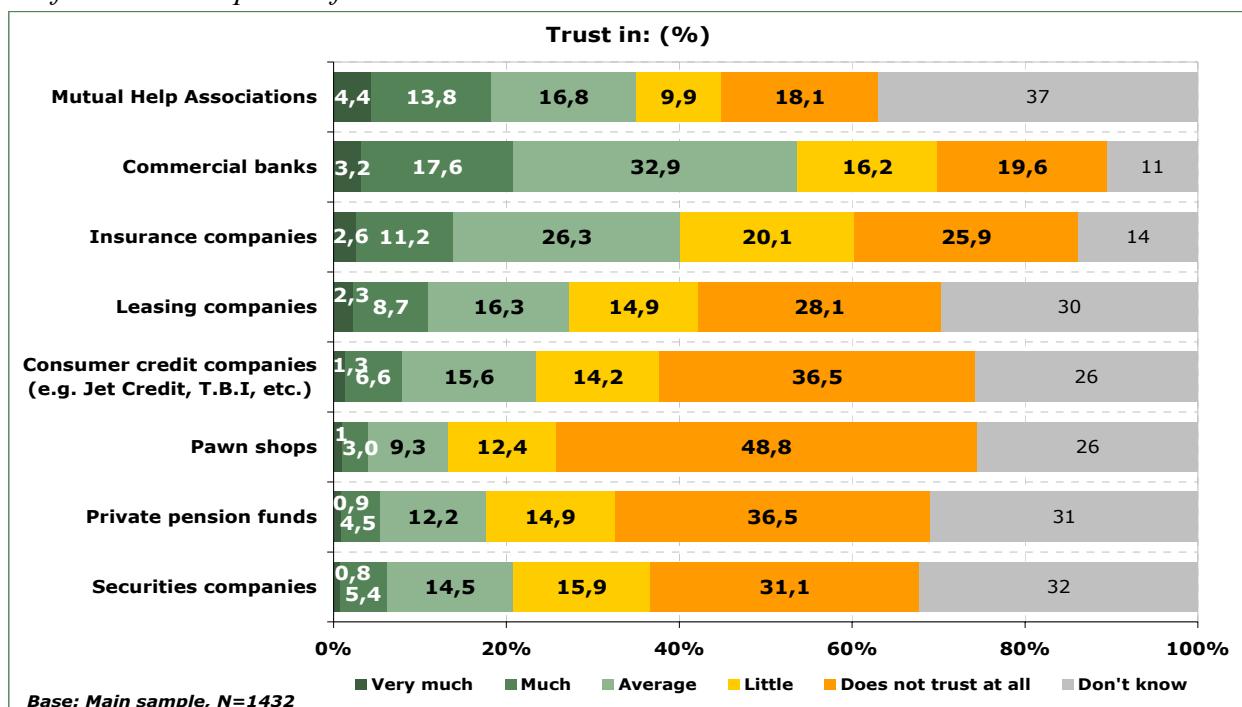

1.2. Confidence in private financial institutions and expectations to the development of the financial markets

Two main trends stand out in the opinions of the private institutions offering financial services:

- ✓ Relatively low level of familiarity with them
- ✓ Prevailing distrust at the activity and services of the majority of them, with the exception of the banks

Graph 1.2.1.

Confidence in the private financial institutions

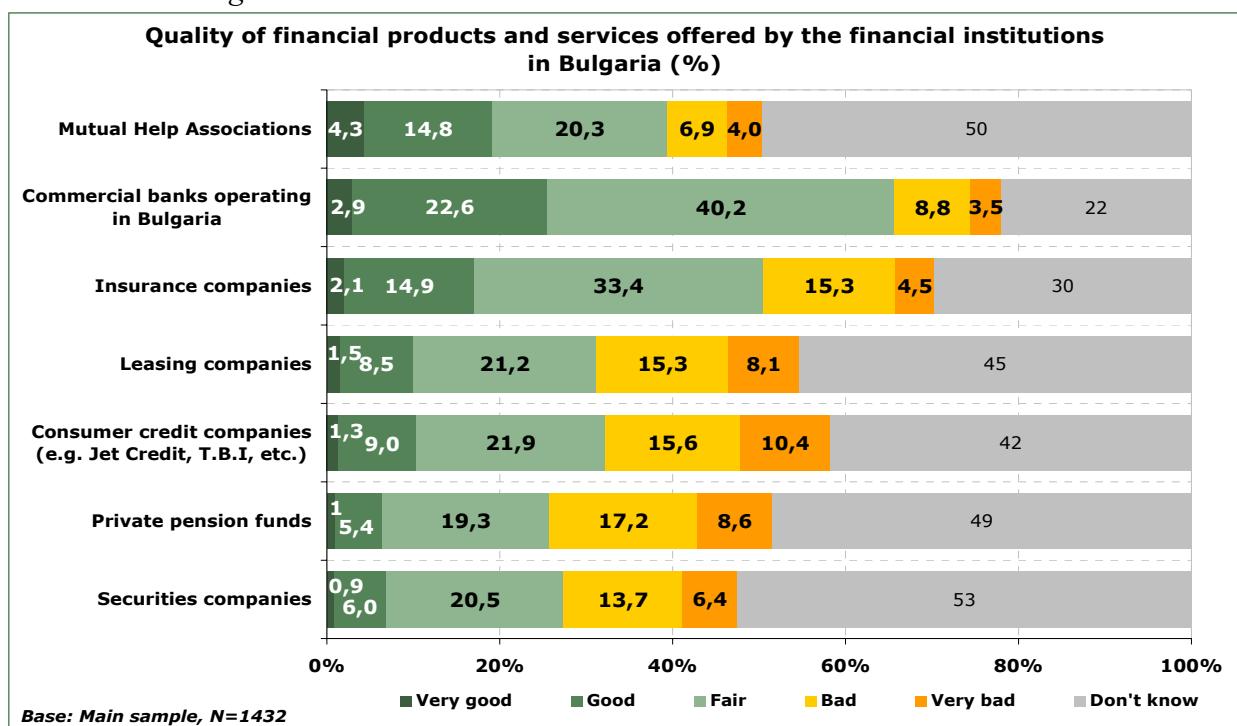

The trust in the banks is relatively the highest, although the distrust still dominates by 15%. Those people who have used the Mutual Help Associations (MHA), popular during the communist period, have a positive disposition to them. The insurance and leasing companies, securities companies, private pension funds and consumer credit institutions generate a relatively high level of distrust. As it is evident from *Graph 1.2.1*, the negative opinions outnumber the positive 6 to 8 times. The most critical is the attitude of the Bulgarians towards the Pawn shops. The opinions of all socio-demographic groups on these shops are very negative.

Socio-demographic factors as age, education level, place of residence, income level etc. influence the level of distrust in the financial institutions. The elder, less educated social groups with lower income trust them less. We should, however, keep in mind that a huge proportion of these social groups are practically excluded from the market of financial services and have no incentive to be interested in them. Thus, the low interest and awareness increase the basic distrust to such institutions.

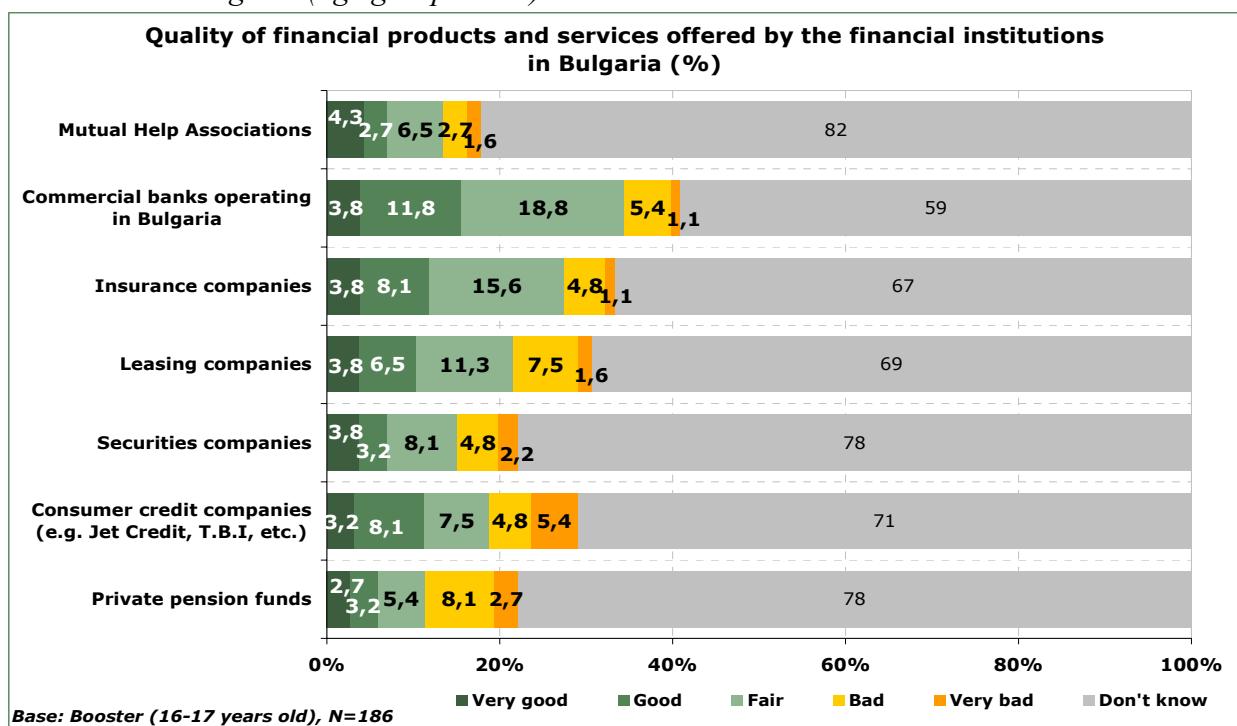

The quality assessment of the services offered by the various financial institutions is strongly influenced by the practice of their use and the general awareness of the citizens of their role. The most popular are the services offered by the banking and insurance companies. Their quality, as that of the MHA services, was defined as the highest. (*See Graph 1.2.2.*)

Graph 1.2.2. Quality assessment of the products and services offered by the financial institutions in Bulgaria

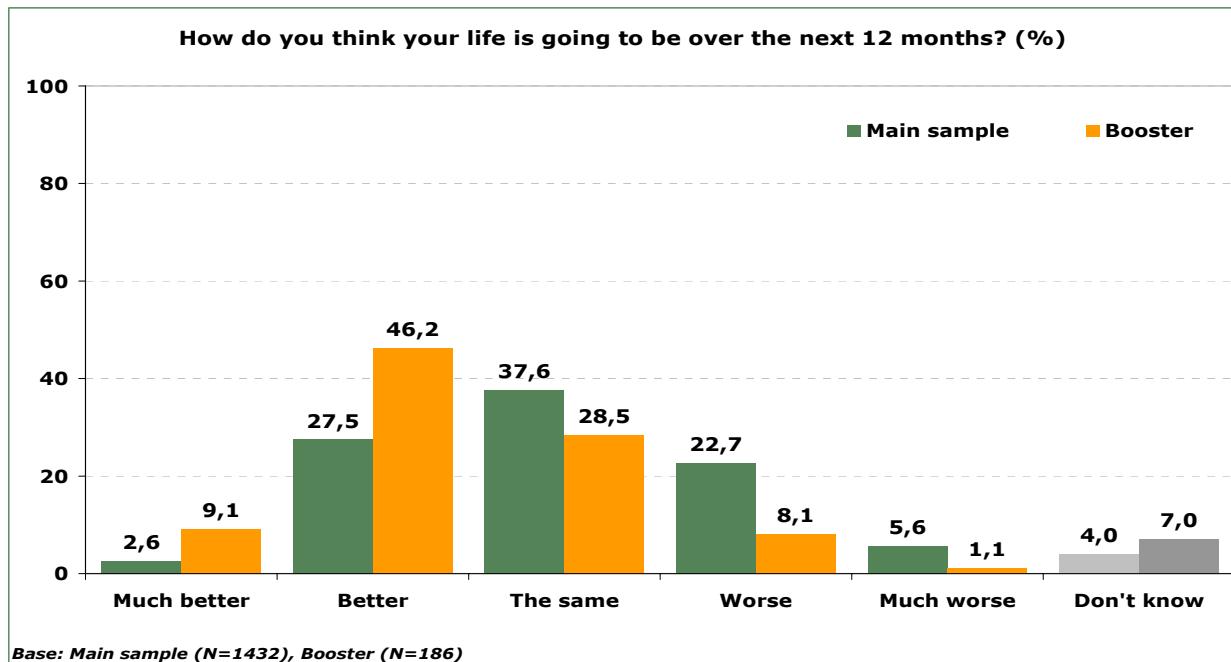

The negative opinions of the services and products of the leasing and securities companies, private pension funds and consumer credit institutions exceed the positive two to three times. In the same time very large proportion of the population is absolutely ignorant about their services. Between 42 and 52 percent of the interviewed have no idea of them and could not express any opinion. In the young age groups this unawareness is even higher (59-82% for various products and services). (See Graph 1.2.3.)

Graph 1.2.3. Quality assessment of the products and services offered by the financial institutions in Bulgaria (age group 16-17)

In spite of the critical turn in the people's opinions of the economic situation, the expectations for their personal economic situation and the stability of the financial markets in general are positive. (See Graph 1.2.4.)

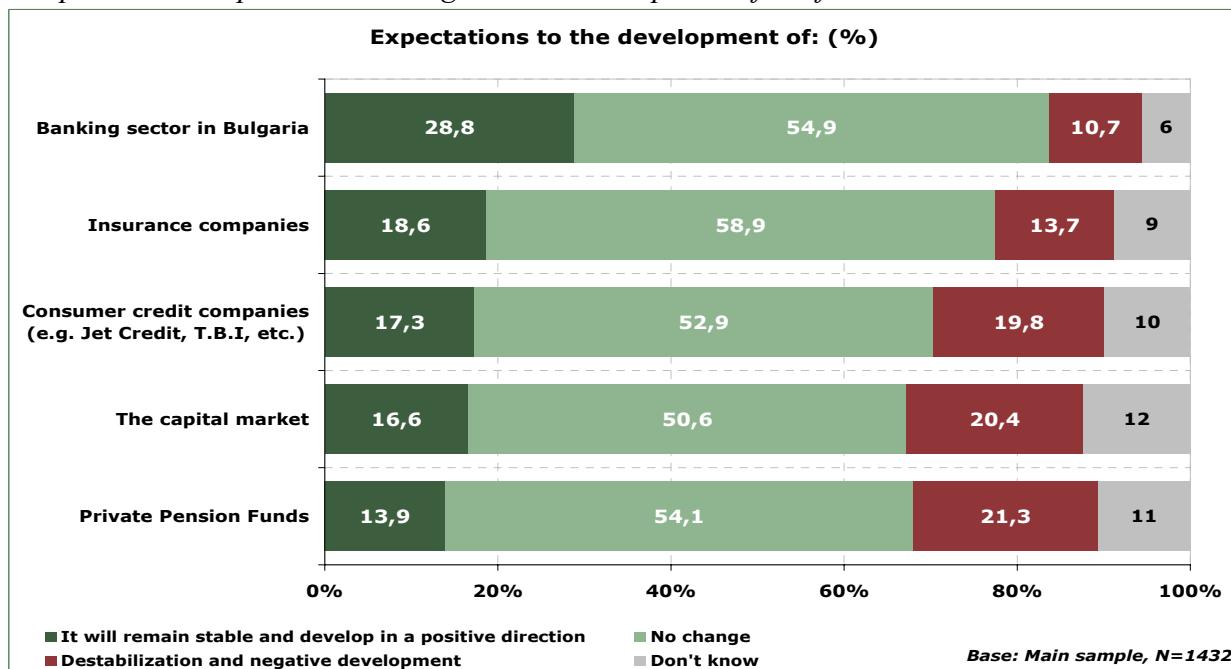

Graph 1.2.4. – Expectations for the personal life – comparison between main sample and booster

The majority of the interviewed expect their present situation either to remain the same (38%), or to improve (30%). Among the youngest the expectations are even much more positive – 55% expect an improvement versus only 9% - deterioration. Analogous, although to a lesser extent, are the expectations in the group of 18-30 year' old, in Sofia, among the people with higher education and personal income exceeding 700 lv. In the group of economically active population the most anxious are the company owners for whom the economic recovery has not started yet.

The expectations as regards the financial and banking sector are similarly – preservation of the current level and further development. (See Graph 1.2.5).

Graph 1.2.5. – Expectations as regards the development of the financial markets

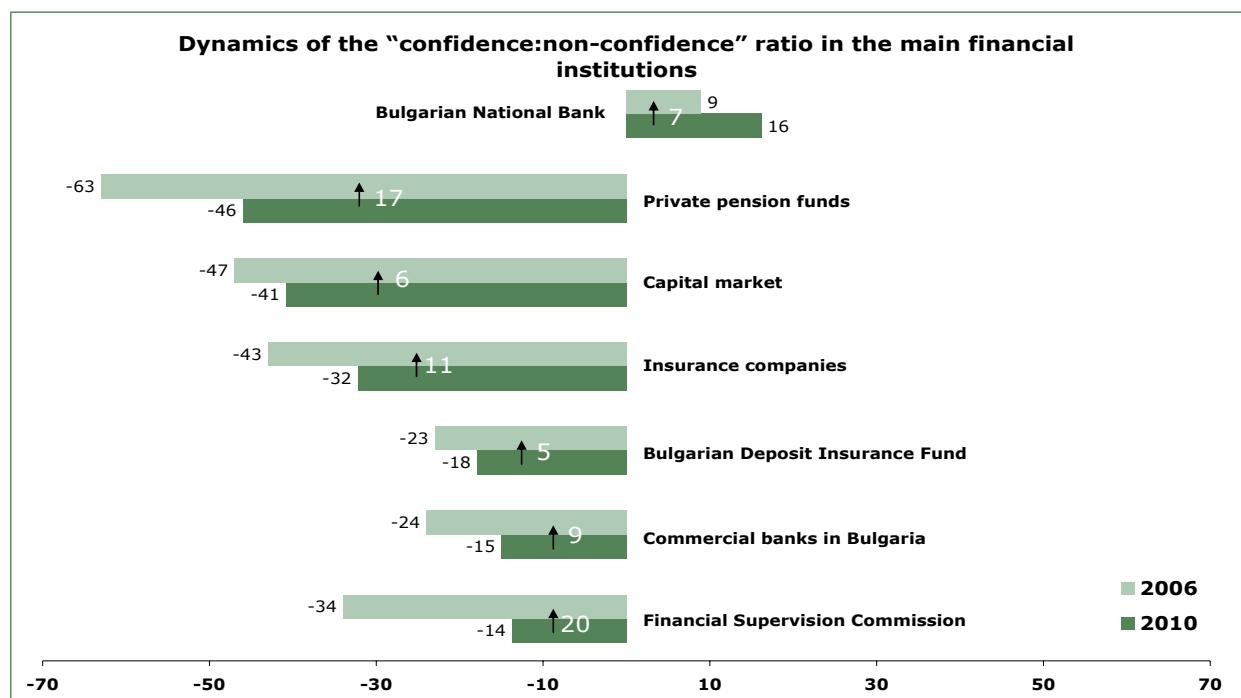

Positive are the expectations for the development of the banking and insurance markets. With regard to the capital market and the non-banking financial institutions slight fears are discernible.

The residents of the capital city, people up to the age of 30 and especially the students, well educated, company owners and self-employed, people with higher income and those using several financial services expressed more positive expectations. Vice-versa, the most pessimistic are the people living in smaller settlements that are generally elder and with lower education and income. The most negative are the expectations to the private pension funds that persist in all social groups.

1.3. Dynamics of the confidence to the main financial institutions and expectations for their development

A comparison of the present data with the results of a national representative survey, conducted by Alpha Research in November 2005¹ shows that in the past five years the public trust in the main financial institutions undergoes positive, although slow, changes. The comparison of the dynamics in the trust: distrust ratio, exhibited on *Graph 1.3.1*, displays a clear positive trend. (See *Graph 1.3.1*)

Graph 1.3.1. Dynamics of the “confidence:non-confidence” ratio in the main financial institutions

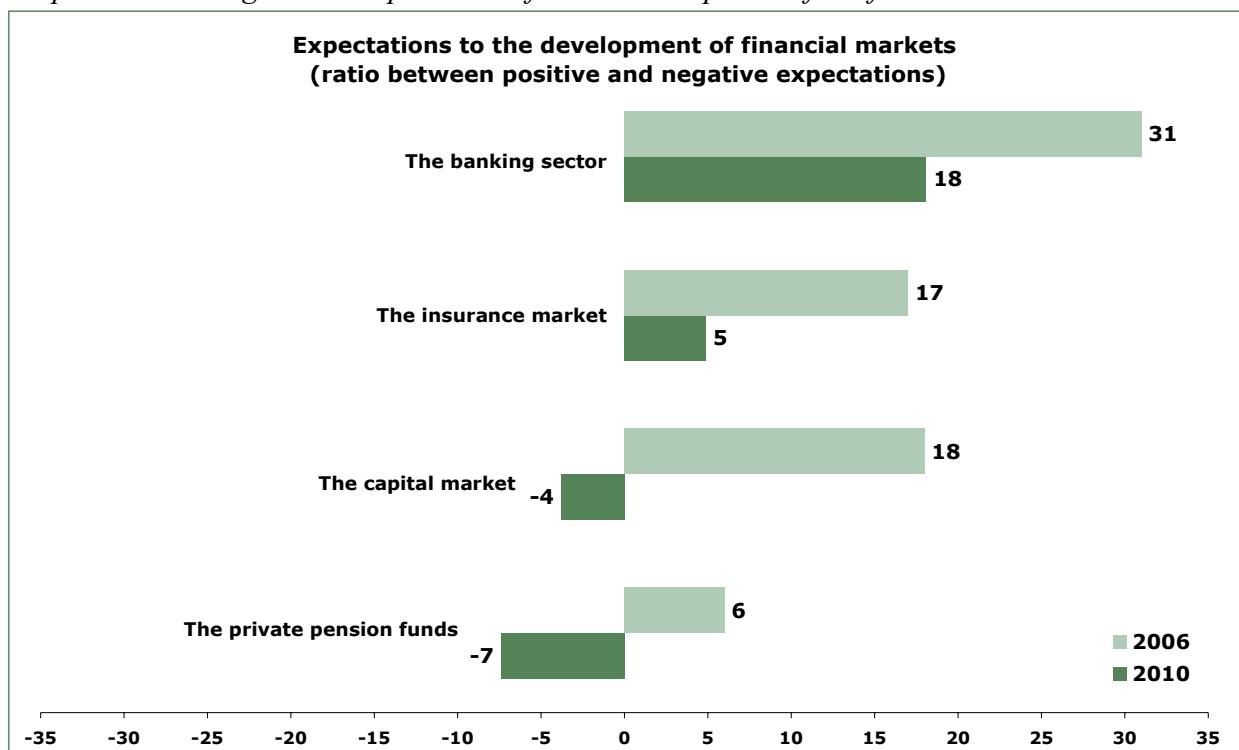

BNB is the only financial institution with a positive balance, which even is growing up (with 7 percent). As already pointed out, the distrust still dominates as regards the rest of the institutions, although to a lesser extent than in 2005. At present, as well as five years earlier, the private pension funds generate the greatest distrust, but their negative balance has reduced by 17%. The negative attitudes to the FSC and the insurance companies have similarly settled down, by 20% and 11% respectively. The distrust at the securities market, which is largely

¹ National representative survey, conducted by Alpha research Ltd. in November 2005 as part of the project *Financial Sector Integrity* implemented by “Emerging Markets Group” as the Contractor of USAID. The comparative data used in the report are derived from this survey.

unknown to the people, remains high. Nevertheless, even this institution enjoys a slight positive trend. The attitudes towards the commercial banks and BDIF have improved.

The worldwide economic and financial crisis and its specific manifestations in Bulgaria have clearly adjusted the high expectations for a marked growth on the financial markets from end-2005. As it is seen on *Graph 1.3.2.*, the positive expectations for a development of the banking sector, although to a less extent, are maintained. However the trust in the recovery and development of the markets that were damaged most by the crisis – private pension funds and the capital market – is seriously shattered. From the previous expectations for growth and development it has twisted into visions of stagnation and downturn. The strongest change concerns the capital market, which will most probably be unable to attract significant funds in the near future. See *Graph 1.3.2.*

Graph 1.3.2. Change in the expectations for the development of the financial markets

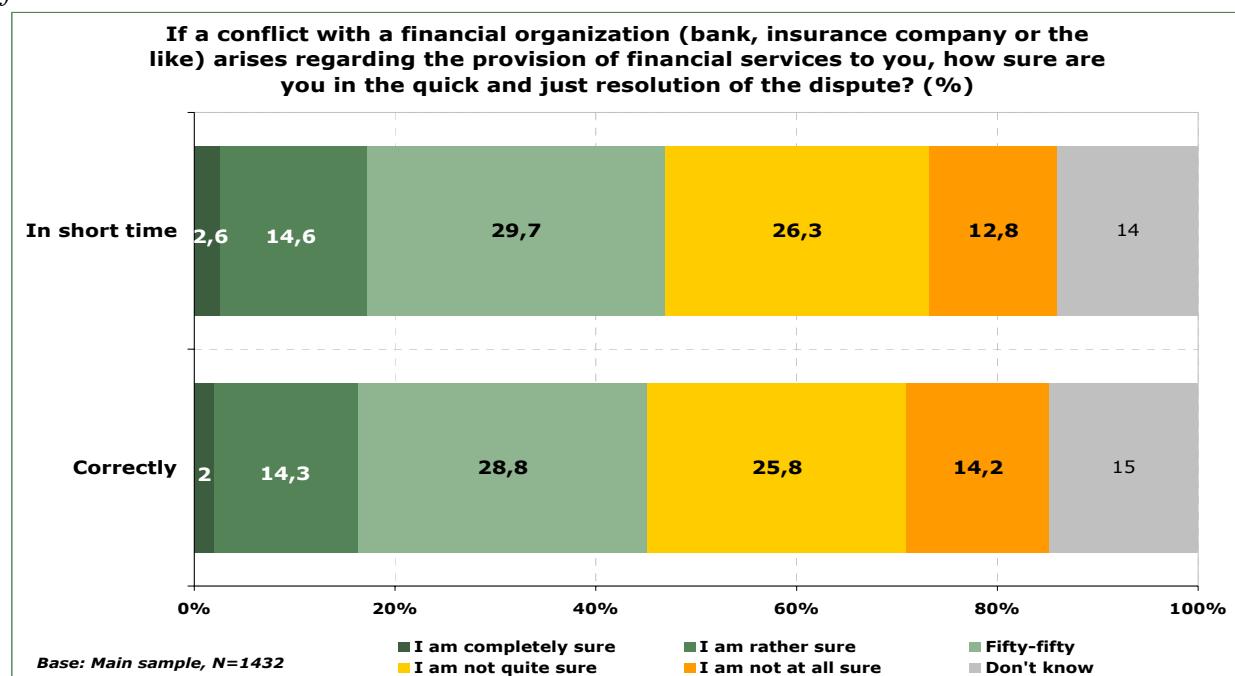

1.4. Confidence in the reaction of the institutions to emerging problems in the use of financial services

The people's opinions of the reaction of financial institutions in the occasion of emerging problem are characterized by:

- ✓ Relatively low confidence that the problem will be solved in a fast and fair manner
- ✓ Preference to submit a complaint to the Management of the institution where the problem occurred, both as a result of poor information about the regulatory bodies and a preference for the fastest and most direct way of solving the problem

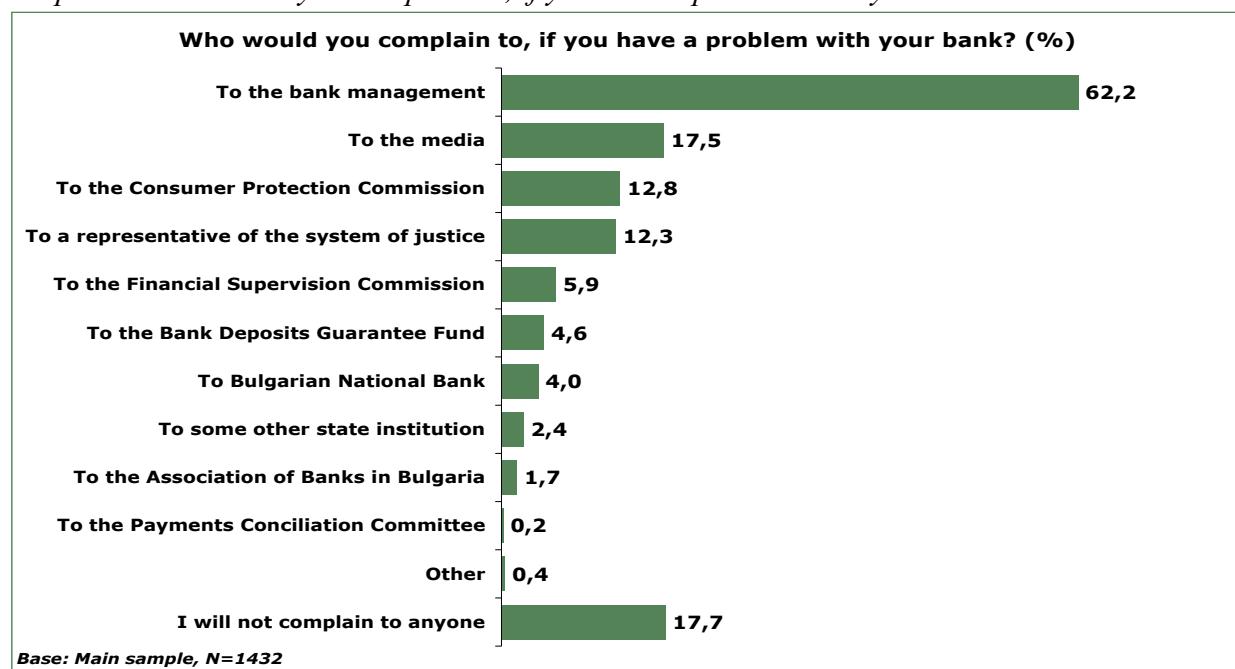

Graph 1.4.1. Confidence in the fast and fair solution of emerging problems in the use of financial services

The Bulgarian citizens tend to distrust the possibility of a fast and fair response on behalf of the institutions where a problem has emerged. A total of 39% of the people are not at all convinced there would be a fast solution of the problem and 40% question its fairness. Thus, only 17% hope for a fast and 16% for a fair judgment. This attitude is slightly better among the residents of Sofia, the people with higher education and the company owners. The group that stands out with its skepticism much higher than the common distrust are the Roma who are 4 times less confident in the possibility of a fair solution of their problem.

The general critical disposition to the adequacy in the actions of the Bulgarian institutions makes the majority of the people look for the most direct and recognized method to solve a problem – the institution's management. See Graph 1.4.2.

Graph 1.4.2. Who will you complain to, if you have a problem with your bank?

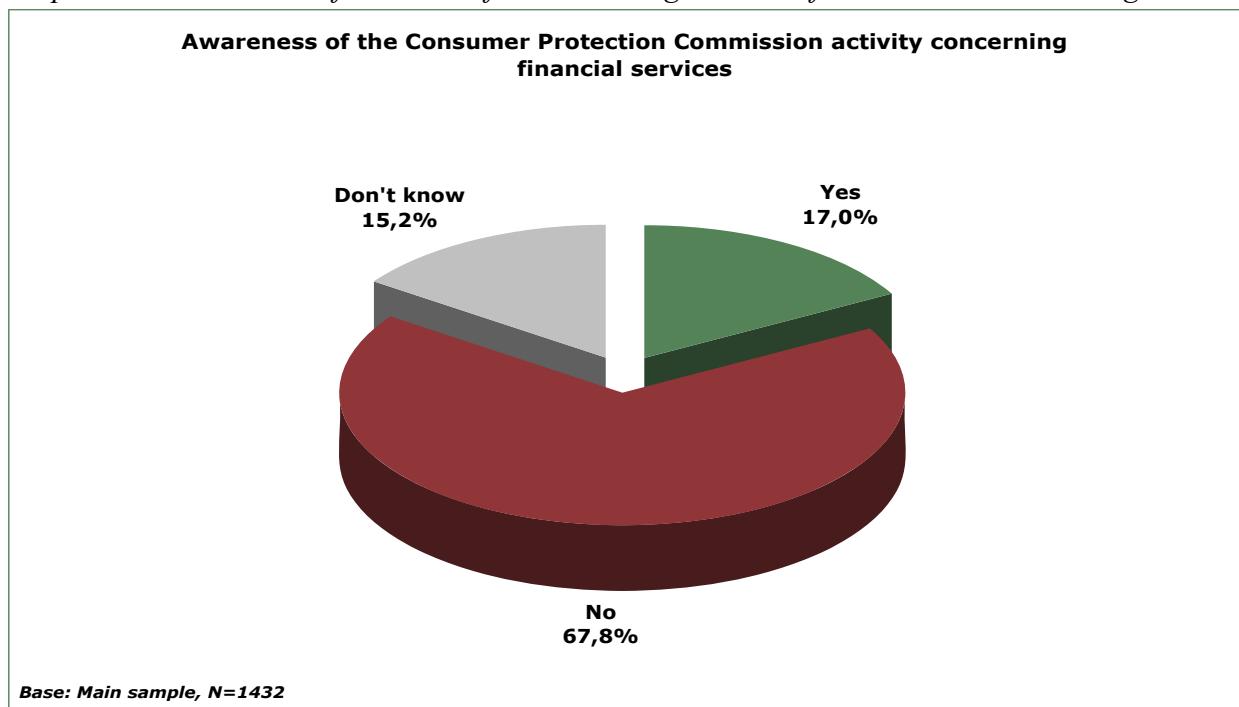

The majority of the people, 62%, would turn to the bank's management. This proportion is nearly four times larger than those of the next institutions that they would consider addressing their complaint to. The media rank second in the people's preferences for submit a compliant (17.5%), and the judiciary comes forth with 12.3%. Looking for the most direct way of solving some problem is a usual practice. The answers of this question show however another aspect of the financial literacy – the very low familiarity and/or credibility of the public regulatory bodies. Only 12.8% would turn to the CCP, 5.9% to the FSC, 4.6% to the DBIF and 4% to BNB.

The proportion of the people who would not complain at all is 17.7%. The majority among them lives in the villages, are elder people over 60, people with basic education and low income, Turkish and Roma – about a third would not search for assistance. Those are the groups that are generally least informed of their consumer rights, are unaware of the institutional mechanisms and bear the greatest risk in terms of their protection when a problem emerges.

The poor awareness of the consumer rights as regards the financial services is equally evident in the answer to the question about the work of the CCP. (*See Graph 1.4.3.*)

Graph 1.4.3. Awareness of the work of CCP with regard to the financial services in Bulgaria

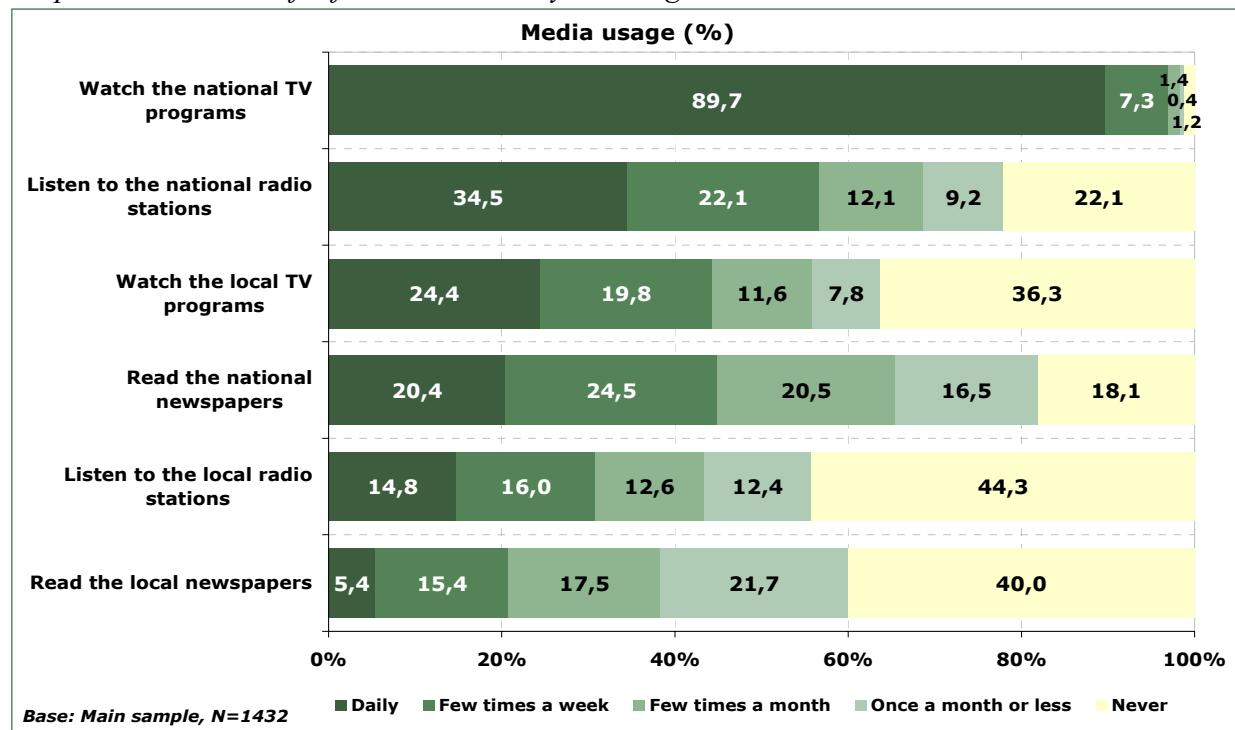

As seen on *Graph 1.4.3.*, only 17% define themselves as familiar with its work, but every third respondent from them would turn to it for assistance. This shows that a greater awareness would lead to a more adequate use of the protection mechanisms provided by the institutions. In order to boost the general trust of the citizens, however, they shall have to take more active efforts.

2. AWARENESS AND CONSUMER RIGHTS IN THE USE OF FINANCIAL PRODUCTS

2.1. Sources of information

The usual information channels used by the Bulgarian citizens are: television, radio stations, newspapers, local radio stations, regional newspapers. (*See Graph 2.1.1.*)

Graph 2.1.1 Sources of information used by the Bulgarian citizens

Although with some differences in the intensity, this hierarchy is valid for all the socio-demographic groups, with one important exception – the young people. The booster sample differs from the main sample by:

- ✓ Lower intensity in the use of all traditional media sources (by 8 to 10%) at the expense of internet. 74% of them use internet every day, while for the main sample this share is just 29%. (See Graph 2.1.2.)

Table 2.1.2. Frequency of the internet use (based on the entire sample and on the users of computers)

	Main sample (Age group 18+)		Booster (Age group 16-17)	
	Computer users	Total sample	Computer users	Total sample
How often do you use the Internet (including e-mail)?	Daily	65.2%	29.4%	85.5%
	Few times a week	22.1%	10.0%	10.9%
	Few times a month	7.7%	3.5%	1.8%
	Once a month or less	3.3%	1.5%	1.2%
	Never	1.7%	55.7%	0.6%
Total		100.0%	100.0%	100.0%

- ✓ The young people listen to the radio much more than they read newspapers. When the use of the World Wide Web is added, the press ranks third after the televisions and the internet.

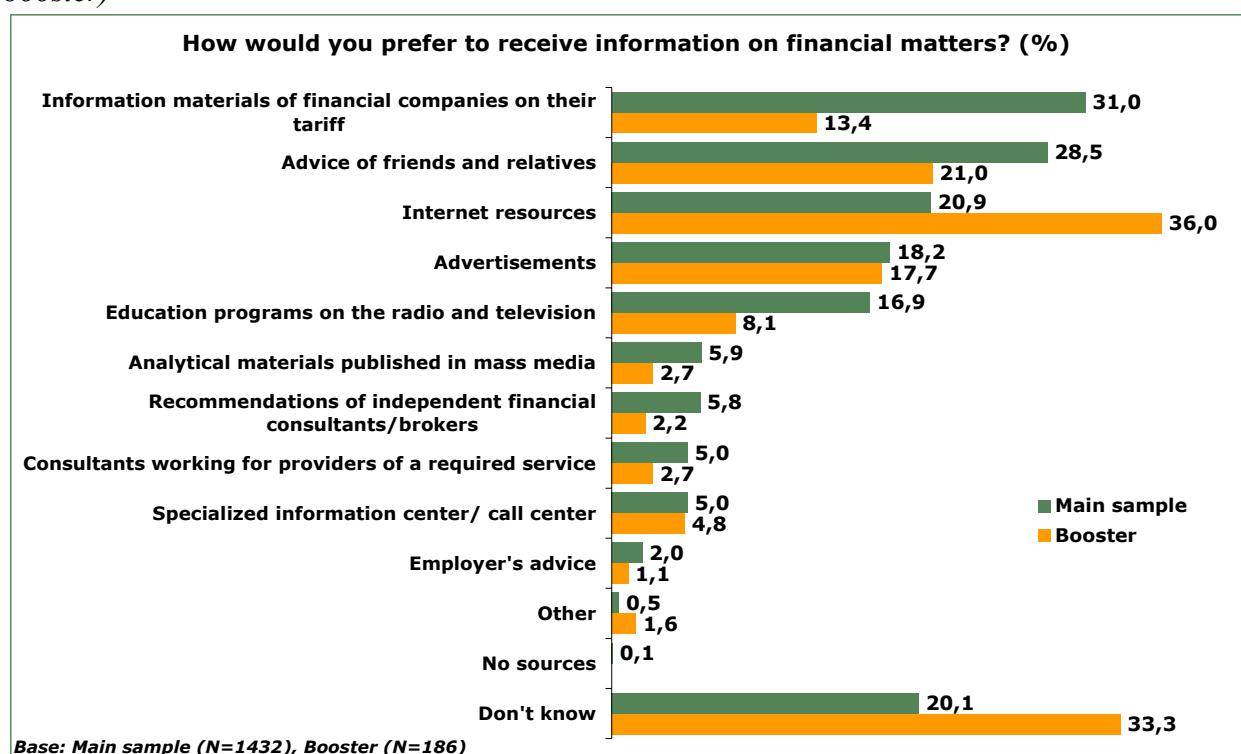

The groups with lower social status, education and income, just as the elderly persons, get almost exclusively informed from the television. In contrast, the middle-aged generation, the working population and people with higher education and qualification, although expressing

preferences for the television, use much more often the newspapers and internet as sources of information.

Compared with five years ago the total share of the Bulgarian internet users has increased by 20 percent – from 24% to 44%. Despite this is the fastest growing information source, the coverage of the World Wide Web in Bulgaria remains unequal. More than 70% of the people in the villages, 84% of those with basic education, 90% of the Roma and 73% of the Turkish, as well as 90% of those over 60 do not use computers and internet. That is why, while the internet would be one of the most effective means of informing the young on financial matters, for other risk and less informed groups, such as the quoted above, other communication channels shall have to be employed.

For people without specialized knowledge it is difficult to comprehend the financial information. Therefore the majority express preferences either for materials/brochures of the financial institutions (31%) or for the advice of friends and relatives (29%) where they can count on “tested” personal experience. Internet ranks first (with 21%) among the media sources, followed by advertisements (18%) and educational programs on the radio and television (17%). (See Graph 2.1.3.)

Graph 2.1.3. Preferred sources of information on financial matters (general sample and booster)

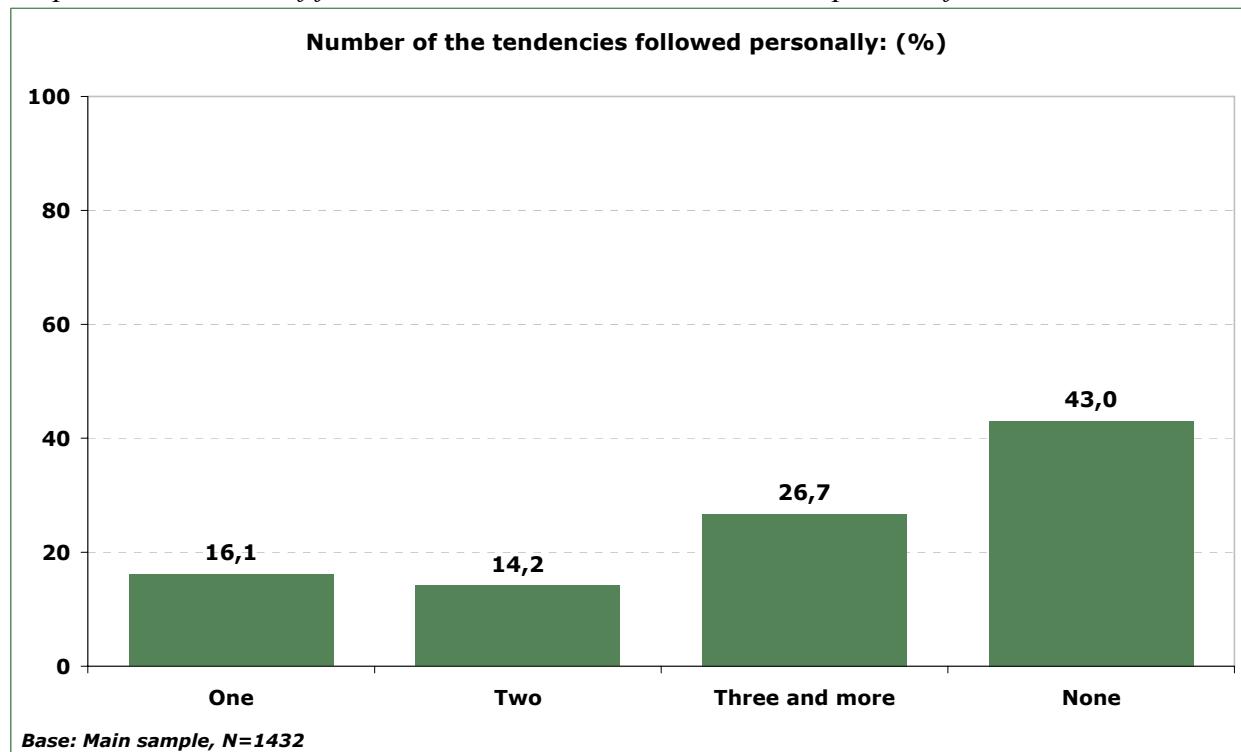

Internet is undoubtedly the number-one source for young people (36%), followed by the advice of friends and relatives (21%) and at a very close distance by the advertisements that have a strong influence on this group. The other more specialized sources are much less known and the interest to them is logically much weaker both in the entire surveyed population and in the sub-groups. 20% of the main sample and 32% of the booster are not sure which are the best information sources for them. In case of urgent situation it will be highly probable that they would turn to occasional channels. The existence of basic financial literacy that would allow the people to distinguish the reliable from the unreliable sources of information will be an important step towards a more confident and effective use of financial services.

2.2. Interest in financial information

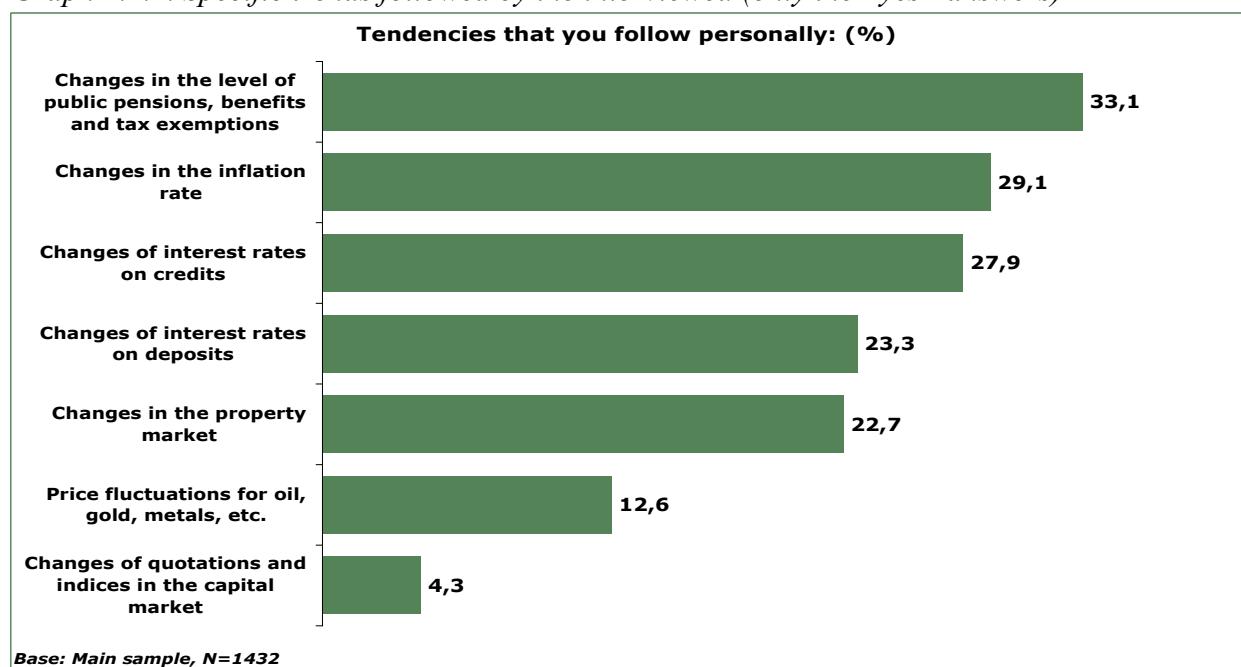

A total of 53% of the interviewed respondents say they are interested and follow at least one trend in the field of finance. Nearly half of them (27%) keep track of three or more. Those are mainly people with higher education, the middle-aged with higher income, those living in the urban area and in particular in Sofia. 43% do not read any financial information and among the young (16-17) this share reaches 79%. (See Graph 2.2.1.)

Graph 2.2.1. Number of financial trends that the interviewed keep track of

The most followed trends by the people are those that are the most closely related to their everyday life. (See Graph 2.2.2.)

Graph 2.2.2. Specific trends followed by the interviewed (only the “yes” answers)

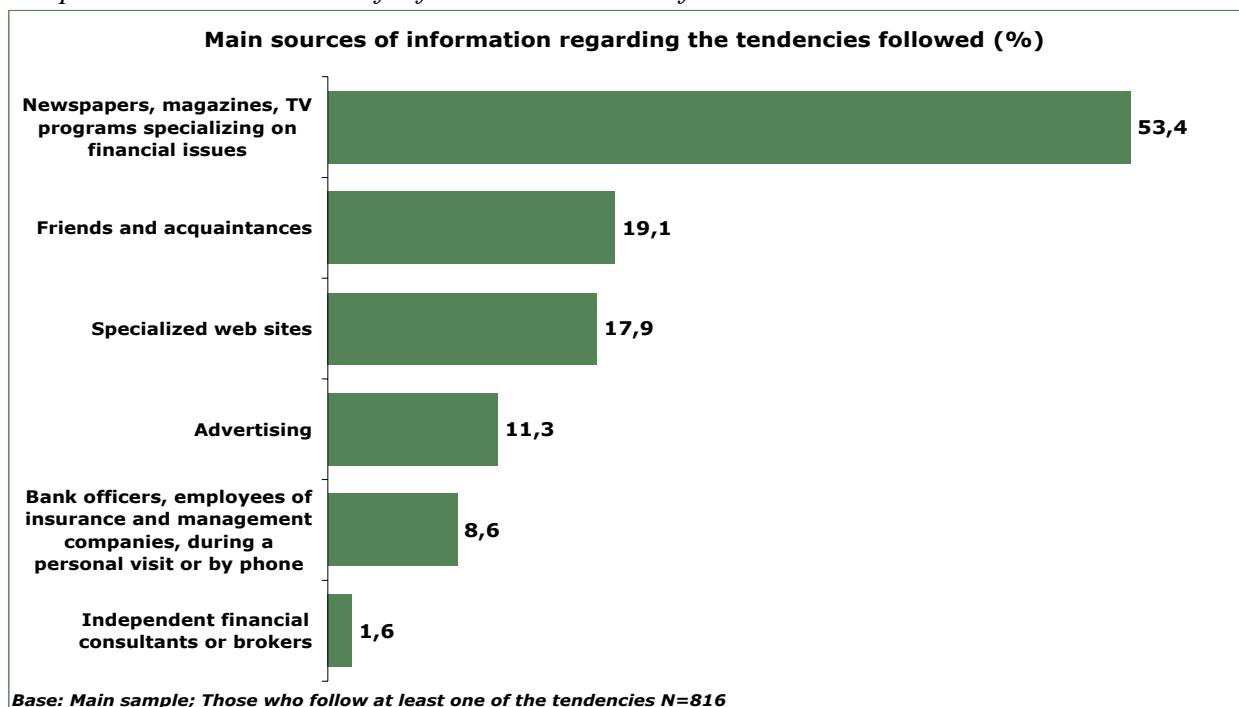

The highest is the interest to the level of the pensions, benefits and taxes exemptions (33%) that affect directly almost everyone in the country. Following suit is the inflation rate (29%), the changes in the interest rates on loans (28%) and on deposits (23%). The fluctuations of the real estate market (23%) and especially of the price of petrol, gold and metals (13%) and the capital market quotations (4%) attract the interest of smaller groups, directly affected by them.

Even the most popular among the trends – taxes, pensions, benefits and the inflation – are virtually absent from the attention of the people living in the small towns and villages, with basic education, low income and the people over 60.

The most wide-spread source of information for those 53% of the people who follows some financial trend are the media (press, radio, television) – 54%. Second and third with a marginal difference are the friends and relatives (19.4%) and the specialized internet sites (18.5%). (*See Graph 2.2.3.*)

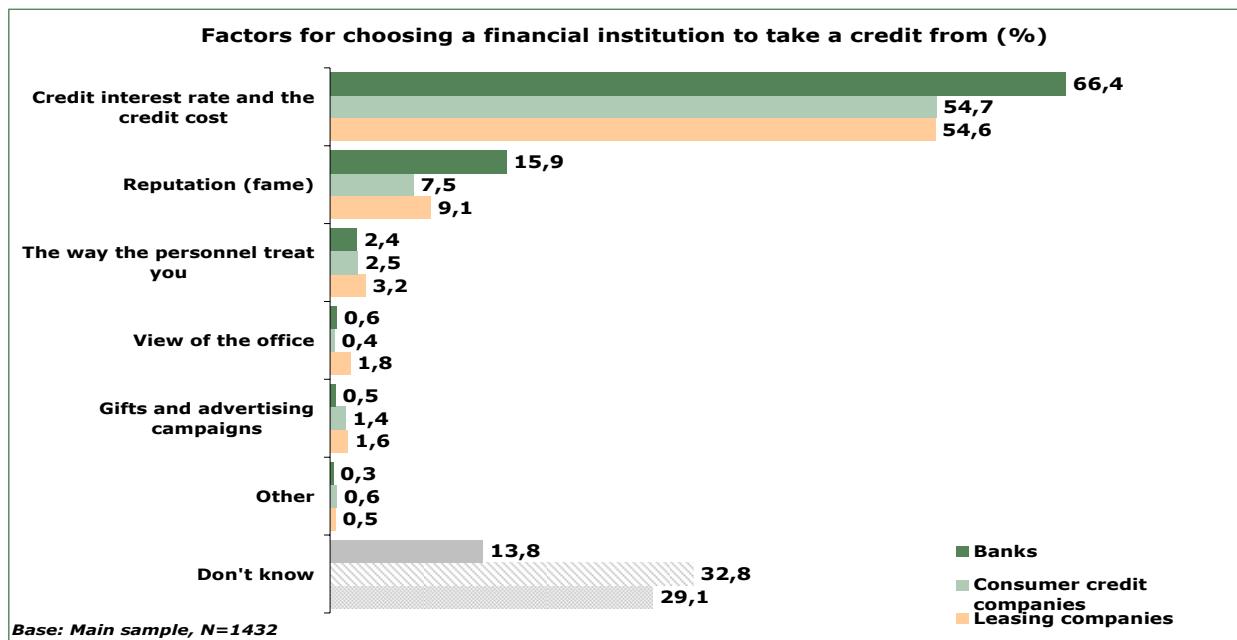

Graph 2.2.3. Main sources of information about the financial trends

In spite of the similar share of respondents, who mentioned „friends and relatives” and „internet”, they were chosen by very different social groups. The advice of friends and relatives is the preference of people living in the small towns, employed in manual labor, the elderly, representativeness of the minorities, with lower education and without the self-confidence of being able to orientate themselves in financial matters. Therefore they rely to persons with higher authority and reputation. Internet is the choice of people who are familiar with the capacity of the network and utilize it to diversify and enlarge their sources of information and to compare different opinions. Those are mostly representatives of the active social groups from the larger urban centers, officers and business owners, with higher education and, most significantly, of the younger age groups.

In their personal practice if they need to take a loan for example, the main information that the interviewed are looking for is the interest rate and the cost of the loan. (*See Graph 2.2.4.*)

Graph 2.2.4. The most important factors the people would be interested in when choosing a loan institution.

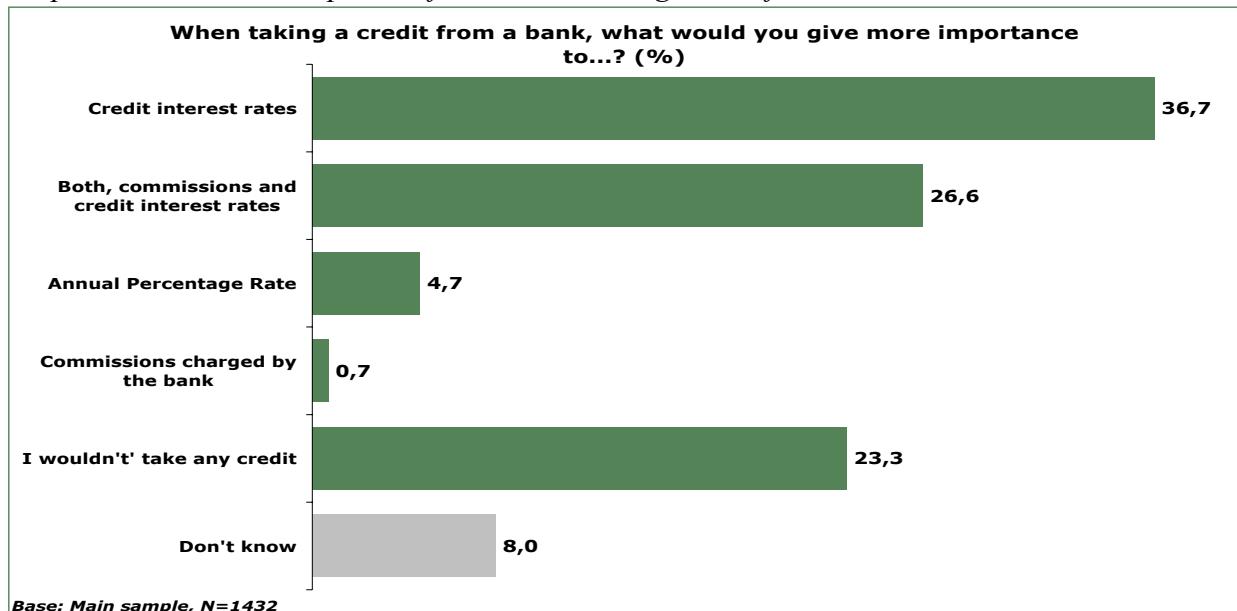

The comparative Graph 2.2.4. shows that:

- ✓ No matter whether it refers to a bank, a leasing or a non-banking institution, the people's attention is mostly focused on the interest rate and the cost of the loan.
- ✓ The authority of the institution that in the years of recurrent bankruptcies and instability of the banking system was the leading factor, is now far behind (four times lower) the specific conditions offered by the institutions.
- ✓ As already pointed out, with the exception of the banks the rest of the financial institutions are much less known to the people. Therefore the share of those people who cannot express an opinion about them is much larger (28-33%).

In principle the interest rates are the most important indicator that people monitor in the field of crediting. The bank commissions have less weight and the annual percentage rate (APR) is virtually unknown to the majority of the Bulgarians. A mere 5% would attribute priority importance to this standardized indicator. (See Graph 2.2.5.)

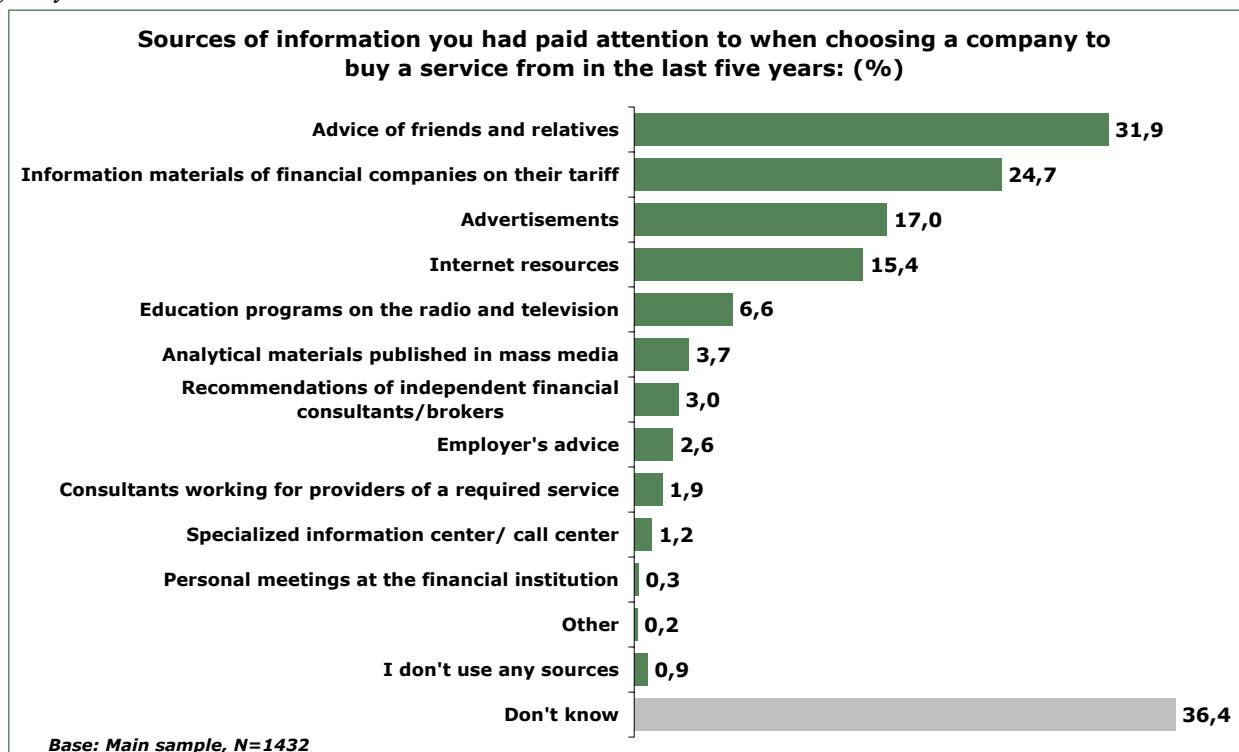

Graph 2.2.5. The most important factor when taking a loan from a bank

Another important element of the informed choice is the comparison of the general conditions offered by variety of financial companies before using a given financial service. The survey showed a series of blank spots in this respect. A total of 34% of the interviewed never or very rarely compare the conditions. Only 19% do it sometimes or always. Most often the conditions are compared by people using a greater number of financial services (46% of them do it often or always versus 19% for the entire sample). More attentive and selective in their choice are the people with higher education, the company owners and people with higher income.

The weak personal activity in comparing the different conditions of the financial institutions has an impact on the way the company whose services will be used is chosen. Unlike the monitoring of various trends (where the media rank first) and the collection of general financial information (where first are the brochures and printed materials of various financial institutions), here the choice number one is the advice of friends and relatives (32%). In other words when choosing a financial institution the informal channels and the use of someone else's experience matter more than the targeted personal effort. The information brochures come second (with 25%). Very close in terms of influence are the advertisements (17%) and internet (15%). The specialized sources are used very rarely. (*See Graph 2.2.6.*)

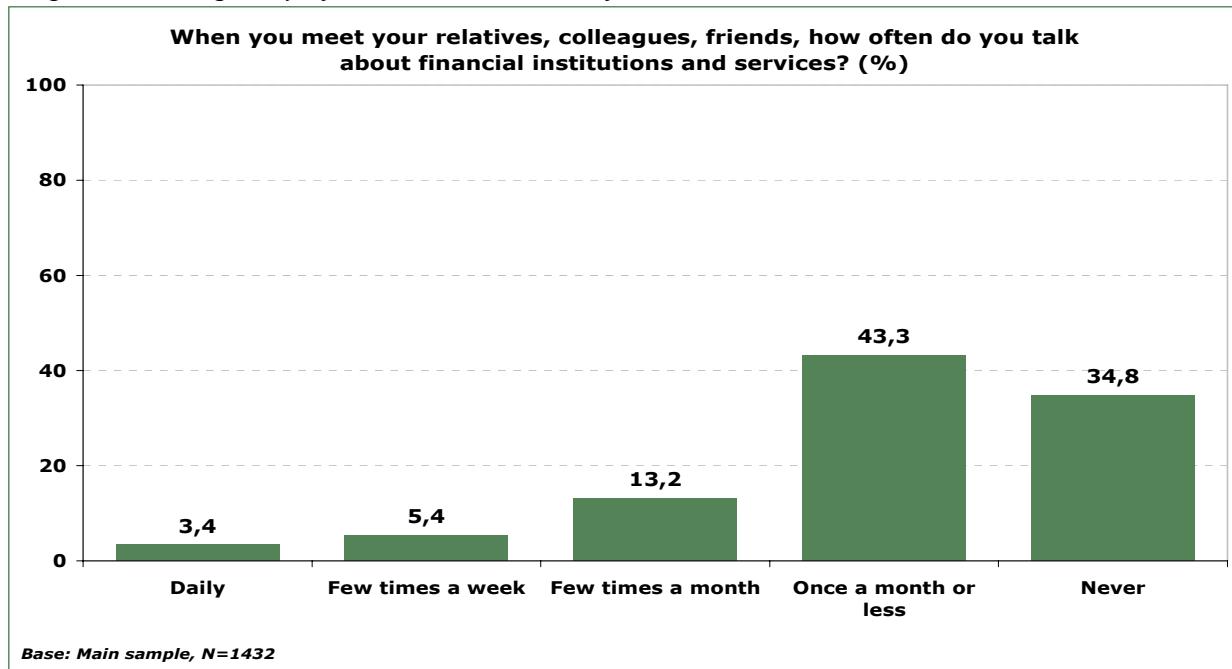

Graph 2.2.6. Sources of information when choosing a financial service company in the past five years

2.3. Intensity of the communication on financial matters

Although the economic situation of the households is the major concern of the Bulgarians, conversations about financial services and institutions are isolated in their everyday life. 35% say they never discuss such topics with their friends and just 21% talk about them at least several times a month. (*See Graph 2.3.1*)

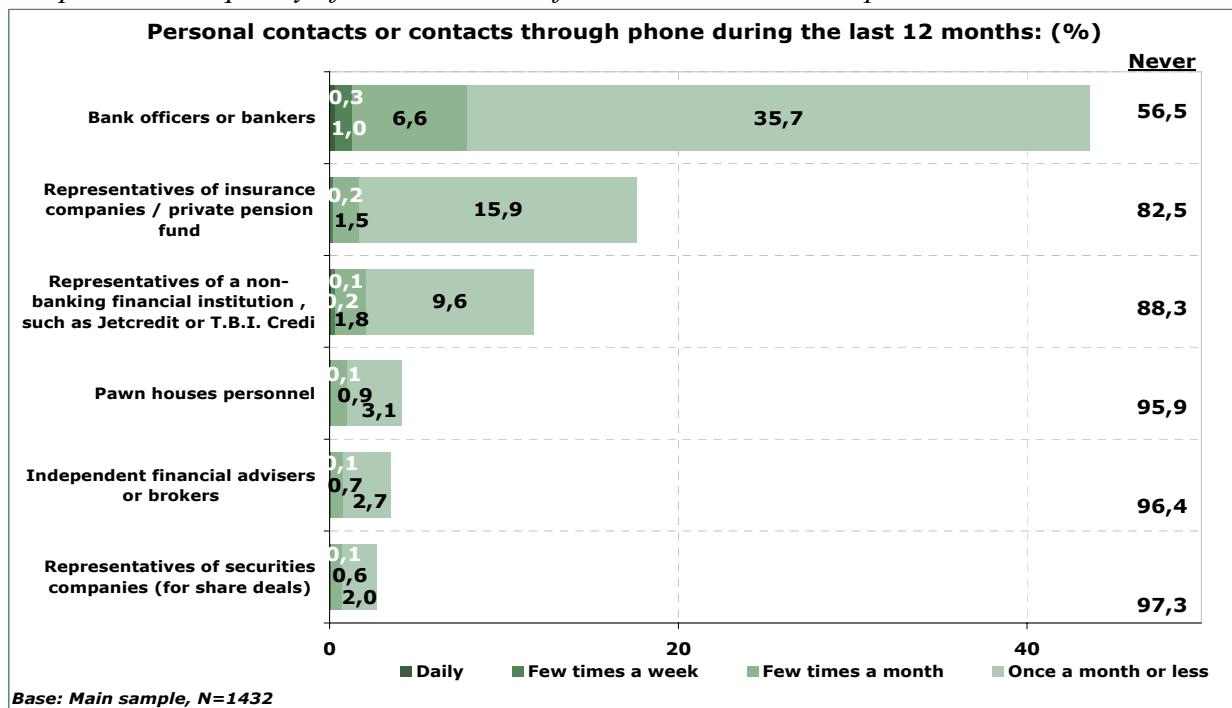

Graph 2.3.1 Frequency of conversations about financial institutions and services

Among the residents of the villages every second respondent says they never talk to friends on such topics. For people with basic or lower education this share is 54%, and it is the same among the Roma. Those who talk most often about financial matters are the persons with higher education, the residents of Sofia and the company owners. The disturbing trend is that not only the lowest status groups but also the middle-aged people, people with secondary education and mid-level work positions do not actively discuss those topics. It could be assumed that such conversations are more often about complaining than discussing strategies or opportunities for solving the problems.

Not only the informal communication on financial matters is poor. The survey also showed that the institutions offering financial services are also not active in acquainting and informing the people with their services and the opportunities they provide. (See Graph 2.3.2.)

Graph 2.3.2 Frequency of visits/talks with financial institutions' representatives

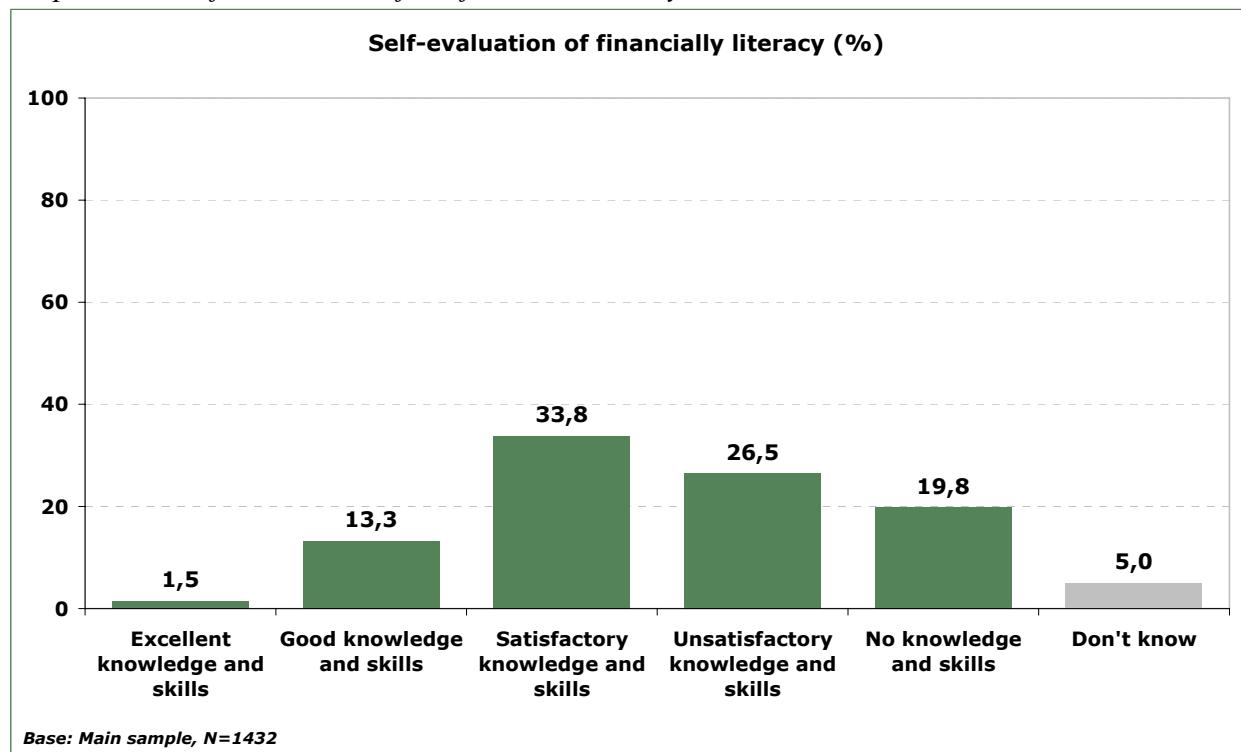

Relatively the most intense is the communication of the Bulgarians with bank officers, which correlates with the fact that the banks are the institutions most widely used. Second in intensity is the communication with the insurance sector and third with representatives of non-banking financial institutions. The less informed the people are, the less they search for information and the lower their confidence to address a financial institution is. The diversification of the channels of contacts of these institutions with the citizens would have a great impact in strengthening the interest and the usage of the financial information for improving the personal living standard.

3. FINANCIAL LITERACY

3.1. Self-assessment of the financial literacy

The self-assessment of the Bulgarian citizens about their financial literacy is predominantly negative (*See Graph 3.1.1.*). Only narrow social groups have a more positive self-assessment than the average. In other words the use, the trust, and the awareness of financial services is concentrated among a small part of the Bulgarian citizens - 10% - 15% of the country's adult population.

Graph 3.1.1. Self-assessment of the financial literacy

Higher than the average assess their financial knowledge:

- The residents of the capital city (23%)
- 31 – 50 year'-olds (18% - 22%)
- People with higher education (30%)
- Officers (20%), company owners (34%), free lancer professionals (28%)
- High income groups (35% - 49%)
- Active users of financial products (25%)

The lowest self-assessment have the residents of the smallest settlements, the eldest citizens, but also the young generations, low educated people, manual workers, unemployed, pensioners and the people with the lowest income. The share of people in these social groups who assess their financial knowledge as more or less unsatisfactory exceeds 60% and even reaches close to

80% in the one of the lowest status groups, namely the Roma (77%) and the households with the lowest income (78%).

Predominantly negative is likewise the self-assessment of the 16 – 17 year' old youth that are supposed to join the financial service market within years. 53% believe their knowledge in the field is unsatisfactory versus 9%, who think of it as very good or excellent.

Due to the not very well developed financial service market in Bulgaria, the Bulgarian citizens are relatively unprepared when entering on it and only later, with the practice of consumption, do they gradually enrich their financial knowledge.

3.2. Objective assessment of the financial literacy of the Bulgarian citizens

The objective measurement of the financial literacy of the Bulgarian citizens corresponds to the subjective assessment of their knowledge in the field (*See Graph 3.2.1*). A significant part of the interviewed experience difficulties when they have to perform basic financial operations and are not acquainted with the role of the state in guaranteeing the deposits of the citizens:

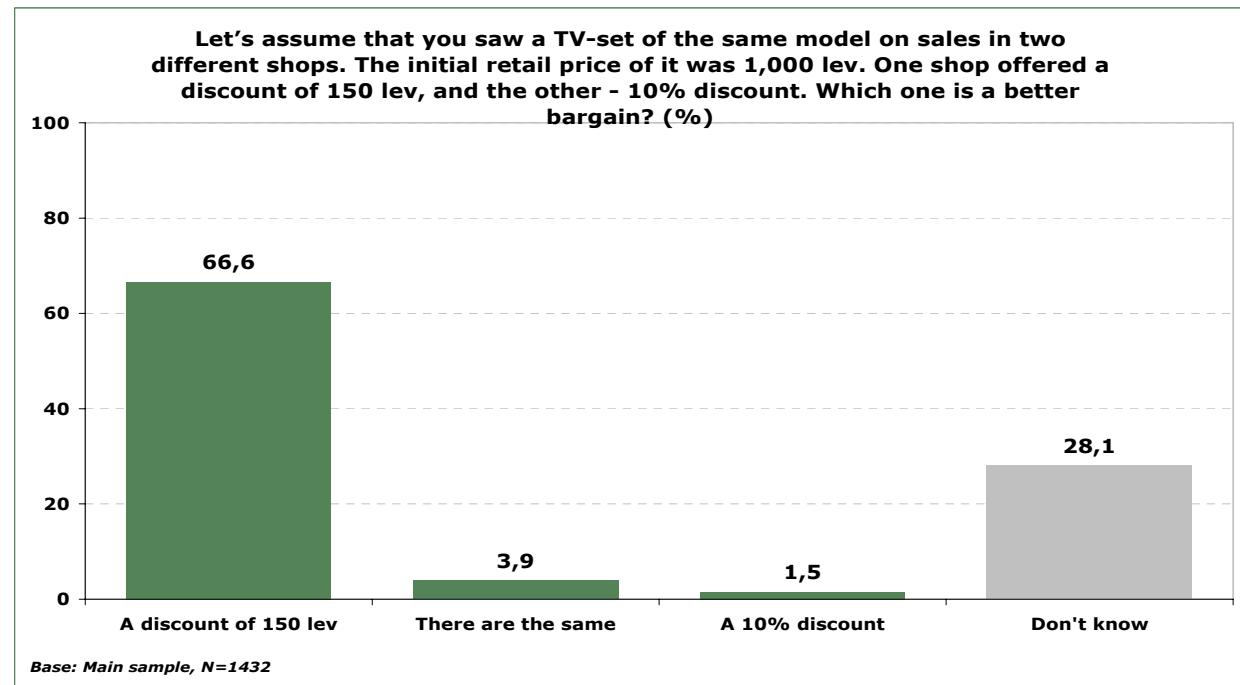

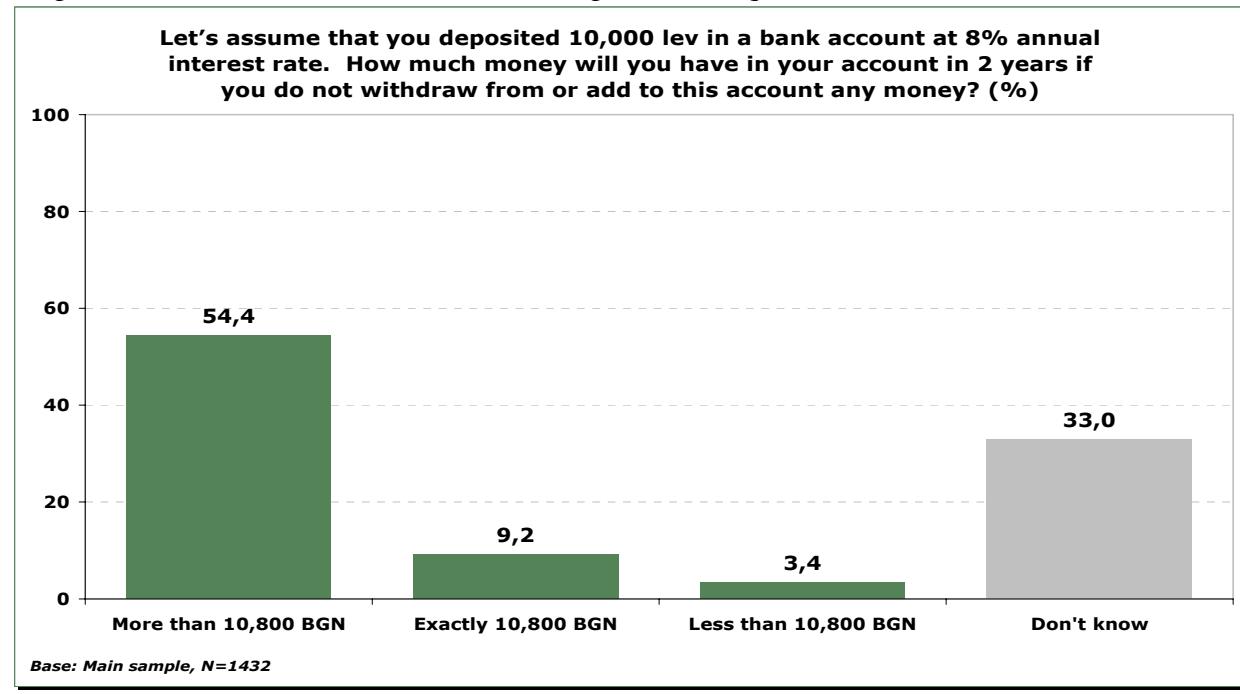

- Only 2% of the interviewed were able to answer correctly all the eight questions, checking the level of basic financial literacy. The Bulgarian citizens can answer correctly up to three questions on average. The lower their opinion of their financial knowledge is, the more difficulties they experience with simple financial operations and vice versa – the people with high self-assessment of their knowledge give more than the average number of correct answers to the questions.

Table 3.2.1

Self-assessment of financial literacy	Average number of correct answers	Share from the adult population
I have excellent knowledge and skills	5.73	15%
I have good knowledge and skills	4.90	
I have satisfactory knowledge and skills	4.27	34%
I have unsatisfactory knowledge and skills	2.93	46%
I have no knowledge and skills	1.07	
Don't know	1.32	5%
Average for the country	3.24	100%

- *Graph 3.2.2* shows that the financial literacy of the Bulgarian citizens boils down mostly to their ability to calculate the more profitable discount (66%) and a simple interest amount (53%) – a task, more or less easily performed by both the higher-status groups (better informed and more active users of financial services), and the lower-status groups (who at present are actually excluded from the financial market).

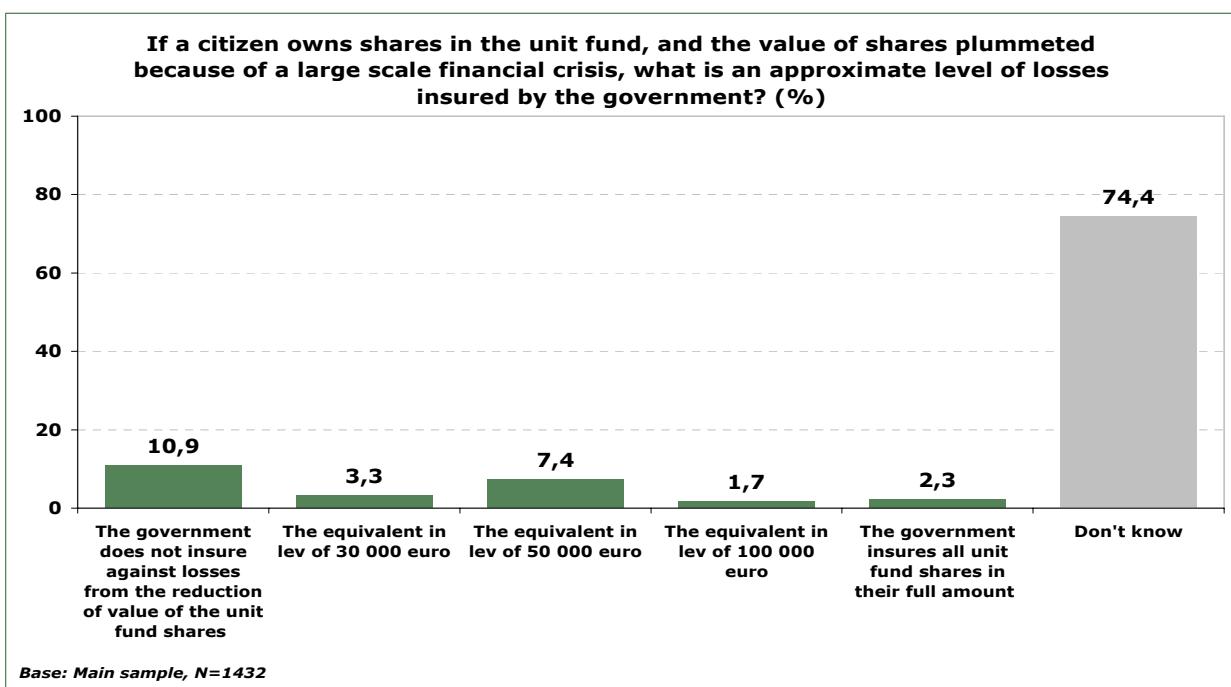

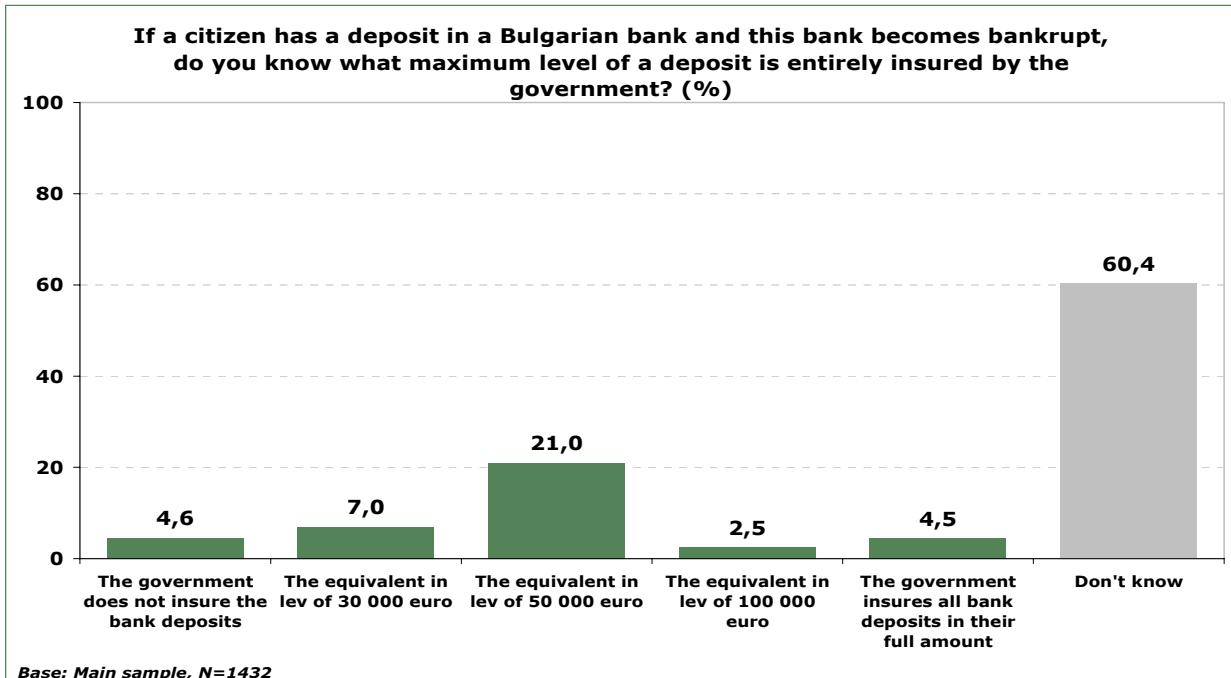

Graph 3.2.2: Answers to the discount and simple interest questions

- Between 43% and 46% of the people have an adequate understanding of inflation and its consequences on their economic situation. There are significant differences on this matter between the social groups. The topic of inflation is difficult for the less educated, less qualified, as well as for the younger (16 – 17 year' old) Bulgarians – i.e. the most vulnerable in the situation of a financial crisis.
- The challenge to calculate a complex interest rate on a deposit or a loan is within the ability of a limited group of high-status users, better acquainted and active on the financial market.
- Even they however are not very familiar with the role of the state in guaranteeing the people's deposits. Although 70% of the country's adult population think it is reasonable for the state to compensate the users in the occasion of bankruptcy, only one-third of those self-defined as familiar with financial matters and some 10% of those unfamiliar know the actual ceiling of state guarantee of deposits - BGN 100 000 (EUR 50 000). Even smaller is

the proportion of those respondents who were informed that the state does not guarantee investments in shares.

Graph 3.2.3: Answers to the two questions of the state guarantees: on deposits and shares

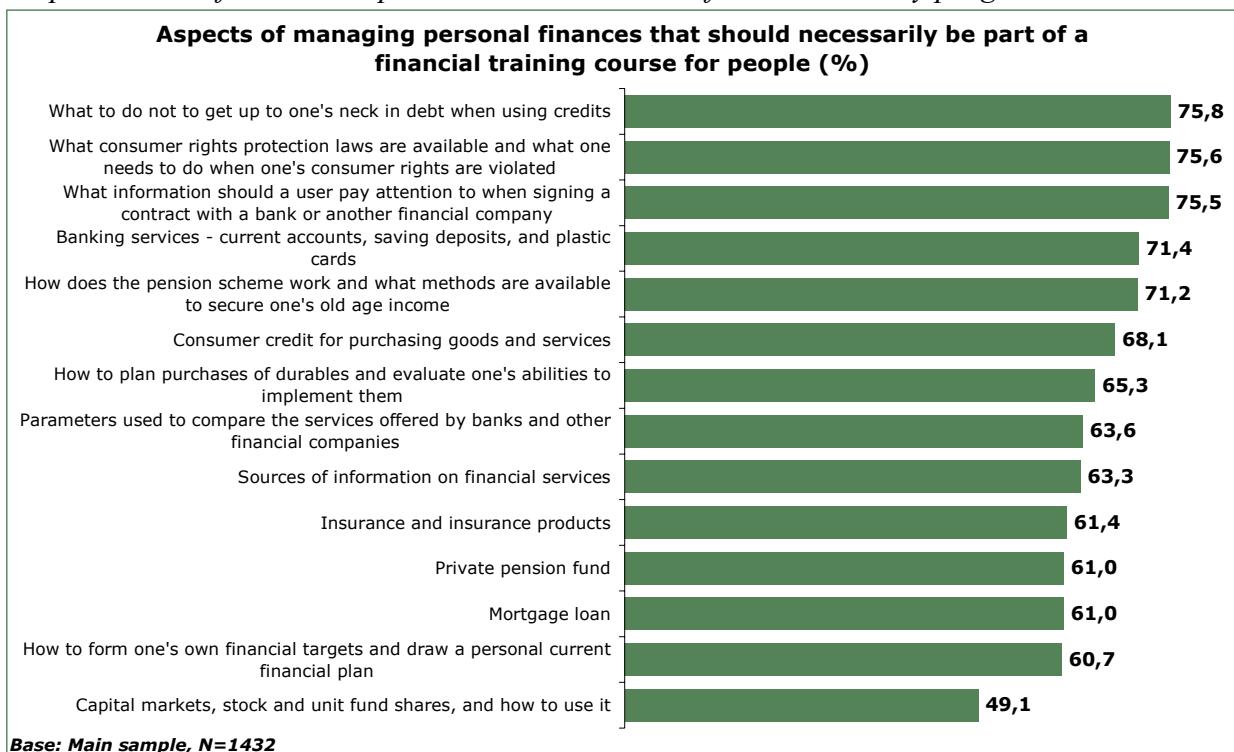

- The familiarity with the role of the state in guaranteeing deposits shows a positive trend in the last five years. It has increased from 17% to 21%, but is still known to a limited circle of well educated people occupying high social positions and actively participating in the financial market. The majority of the general population is not familiar with that matter. In the small settlements, for example, among the eldest and the youngest (16 – 17), Roma and people with the lowest income, the level of unawareness exceeds 70%.

3.3. Attitudes to the financial literacy program

The low awareness level of the Bulgarian citizens justifies the necessity for implementing a financial literacy program. The first challenge will be to identify the target groups of his program. It shall fully depend on its key objectives:

- If the main goal of the program is to educate the poorest and illiterate social groups whose financial literacy is close to zero, it should consider the fact that those people have serious difficulties defining what exactly they want to learn about. This is largely due to their lack of knowledge but also to their disinterest in the topic. Because of their exclusion from the financial market the people with lower social and economic status show nearly no interest in this sphere.
- If the main goal of the program is to improve the knowledge of the current users of financial service, it should consider their interest in a wide range of issues.

Graph 3.3.1: Preference to topics to be included in the financial literacy program

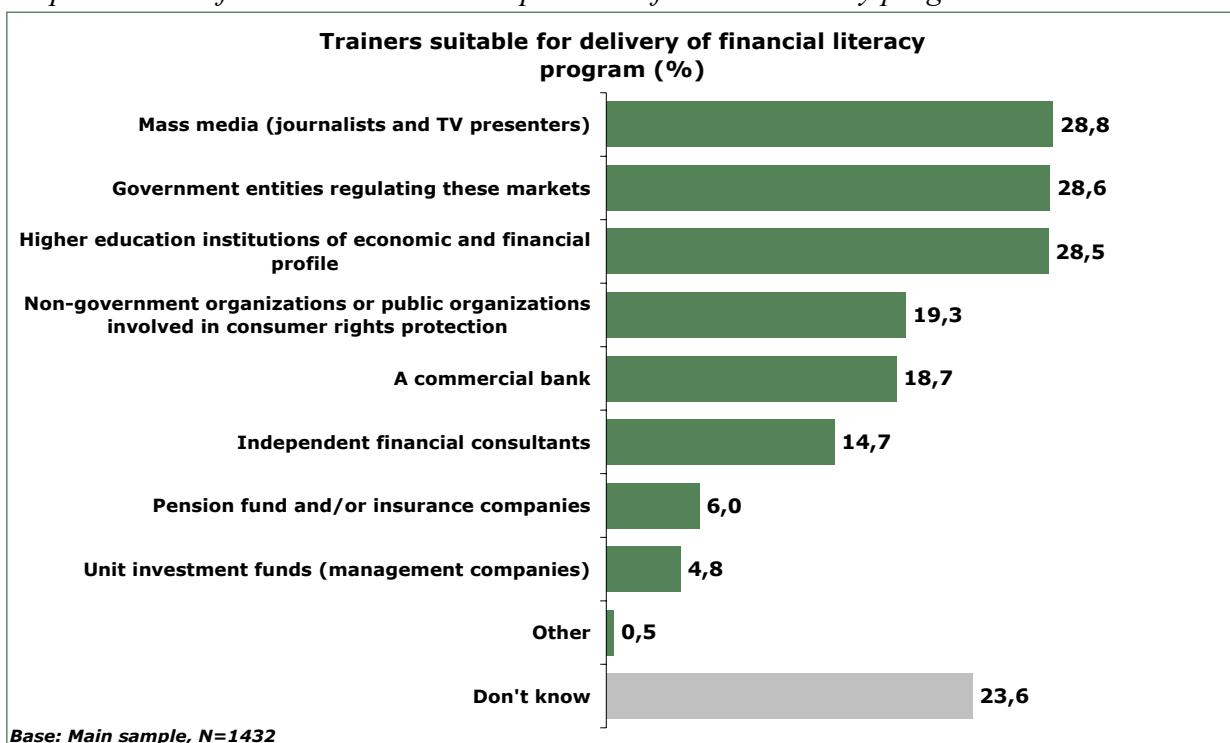

The survey tested fourteen possible topics that can be included in the financial literacy program. Depending on the interest they generate, the topics were classified in three main groups (*See Graph 3.3.1*):

- The most attractive topics for the public are: „*what should I do, so that I don't sink deep into loans*” (75%), „*what are the active consumer protection laws and what should one do when their consumer rights are violated*” (74%), „*what kind of information should the user pay attention to when signing a contract with a bank or some other financial institution*” (74%), „*which are the main bank services – payment accounts, deposits, cards*” (70%) and „*on what principle does the pension system function and what opportunities does a person have to secure income for their old age*” (69%). These are the main issues for the people regardless of their financial literacy level and current activity. Therefore these topics could form the mandatory basis for financial education of the population. These topics will attract the broadest possible public interest and, on the other hand, will create the necessary conditions for achieving efficient results. The only exception in this group of topics is the understandably weak interest of the 16 – 17 year' old group to the principles of the pension security system.

- The second group includes questions related to information about specific products and services – *how can you get a consumer or mortgage loan, how to utilize the insurance products, what should one pay attention to when comparing the offers of various banks and insurance companies, how differentiate between advertising and objective information*. The interest to these topics is greater among the actual users of financial services: the better educated and economically active residents of the urban centers who utilize most actively the opportunities created by the financial market. Therefore it would be best to include them in the program mostly in the form of practical examples and cases, helping the users get orientated in a life situation.
- The third group includes development of skills for financial goal-setting and planning, private pension security funds, opportunities for joining the capital market. They were pointed out by the best informed citizens for whom the participation on this market is a form of investment. Those are the people with the highest income and high ranking positions in the occupational hierarchy and generally speaking the most attractive clients of the financial institutions. It would be most effective for the program respectively to include such topics in the form of consulting rather than training.

Graph 3.3.2: Preferred institutions to implement a financial literacy program

An important element in the planning of the financial literacy program is to analyze the people's opinion of the most appropriate trainers on these matters (*See Graph 3.3.2*). No single institution appears as the respondents' favorite for the purpose. The expectations are directed at several main training and information channels. The top three positions in this classification are occupied by the media (29%), the public regulators of the financial market (29%) and the universities with economic or financial profile (29%). NGO, the commercial banks and the independent financial consultants form the second group of appropriate trainers.

The opinion of the most appropriate trainers on financial matters is heavily dependent on two factors: accessibility of the training institutions and confidence in them. The media and state institutions are the most accessible for the wide range groups of people, i.e. as pointed out earlier in the analysis, they enjoy the greater trust of the users compared with the private financial companies.

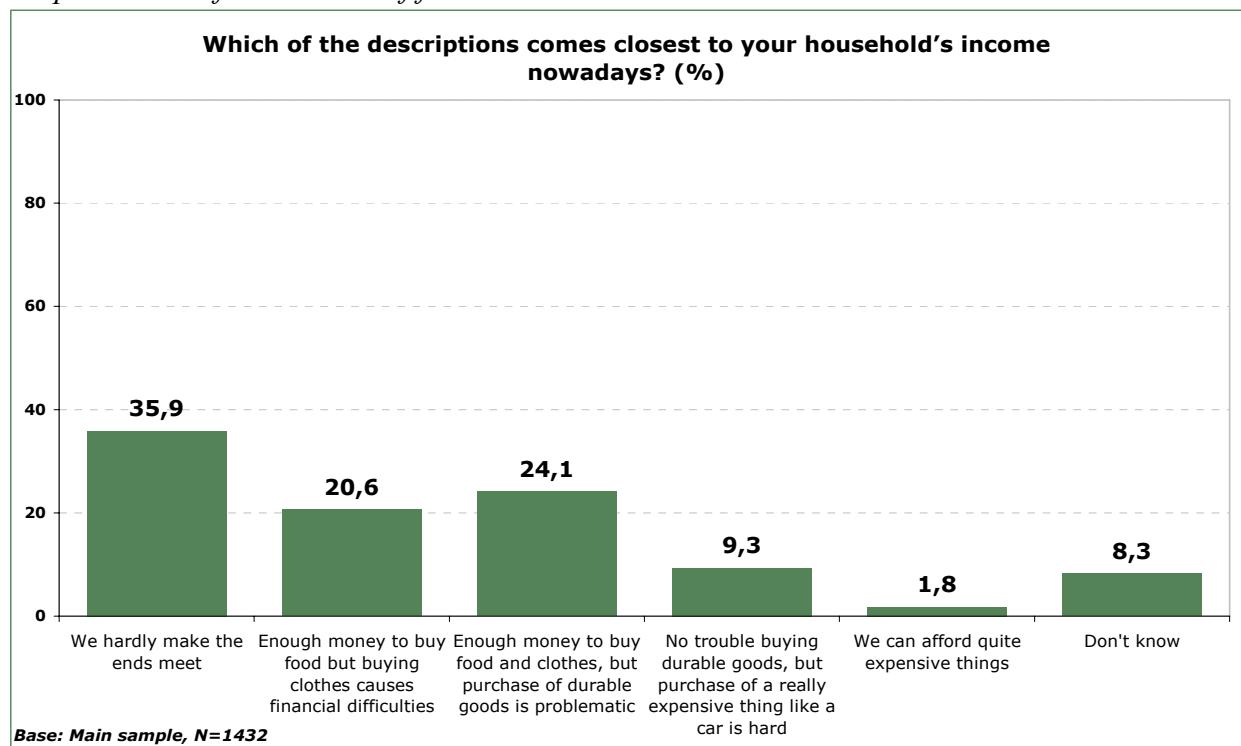

At the same time there is a small difference in the preferences of the different social groups, resulting mostly from their social status and economic activity. The broad public prefers the media, while the better acquainted with the financial matters citizens prefer the higher education institutions, NGOs and independent financial consultants.

4. HOUSEHOLD FINANCIAL MANAGEMENT

4.1. Financial status of the Bulgarian households

The self assessment of the personal financial situation is predominantly negative. The largest part of the Bulgarian citizens (38%) stated they were hardly able to satisfy their basic needs. Every fifth respondent has money for food, but the purchase of clothes already creates financial difficulties. A quarter of the respondents have no problem buying food and clothes but experience difficulties when they need to provide goods for long-term use. Only 10% of the country's adult population enjoys the comfort of being able to buy the most necessary but also the more expensive goods.

Graph 4.1.1: Self-assessment of financial situation

The survey results show that the income of the Bulgarian households as of April 2010 was on average at 720 lv. (about 360 Euros) total for the household and around 390 lv. (about 200 Euros) personal earnings. Two important trends related to the financial status of the households are registered:

- Strong differentiation of the income and economic status, depending on: the education level, age, place of residence, social status. The better educated, higher in the social hierarchy and living in a bigger settlement the people are, the higher is the average amount of their income. Conversely, the lower social status means considerably lower income (*See table 4.1.2.*)
- In Bulgaria the remuneration gap between men and women remains a significant problem (although compared with the average level for the EU Bulgarian is among the member states with lower levels of inequality).

- The two major sources of income are the salary (46%) and the pension (26%). One-tenth of the adult citizens declared absence of any personal income. Younger persons up to 30, people with low education level, students and Roma mention this option more frequently.

Table 4.1.2

		Average household income, April 2010 (in BGN)	Average personal income, April 2010 (in BGN)
Type of residence	Sofia	1117	633
	Regional center	763	403
	Smaller town	602	338
	Village	482	277
Age	18 – 30	912	469
	31 – 40	830	494
	41 – 50	849	466
	51 – 60	695	403
	61+	467	270
Education	Finished bachelor, master or higher degree	1174	664
	Finished college	810	511
	Finished secondary school	776	410
	Finished elementary and lower	420	242
Ethnicity	Bulgarian	749	415
	Turkish	550	306
	Roma	342	204
	Other	569	310
Gender	Male	731	438
	Female	684	352
Total for the country		718	389

The income level is one of the key factors determining the financial activity of the Bulgarian citizens. The higher their income is, the more active they are in using financial services (a detailed picture of the financial consumption will be presented further down in the analysis).

4.2. Management of household budget

As it can be seen on *Graph 4.2.1.*, the large majority of the adult population routinely makes a financial plan of their household income and expenses. The only exception are the Roma who say they make no financial plans and the 16 – 17 year olds of the booster sample, where the majority have no information whether this practice exists or not in their households.

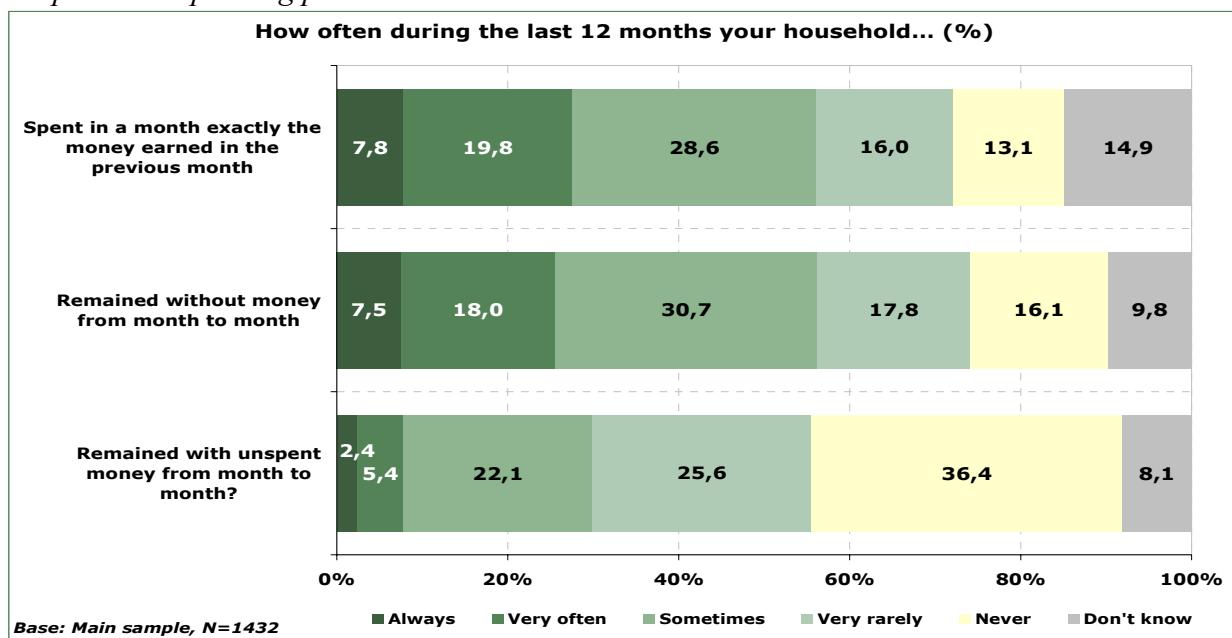

Graph 4.2.1: Household's financial plan

The daily practices of the households show substantial differences in the people's understanding on the accountancy of the financial resources. The largest part (39%) have rather a general idea of the income and expenses in their household, 28% keep all records from their financial operations and another 22% simply keep all records without calculating what they earn and spend:

- The most conscious and strict in their personal accounting practices are the pensioners from the urban areas who either have very low income or higher than the average for the country.
- The practice of keeping the receipts without actually accounting their resources is typical for citizens with medium economic status living in the urban areas who are currently at the end of their career in pre-retiring age.
- The economically active generations, the working and the most active users of financial services are the people who keep a general track of their economic situation without focusing in detail on individual income and expenses.

Graph 4.2.2: Spending practices

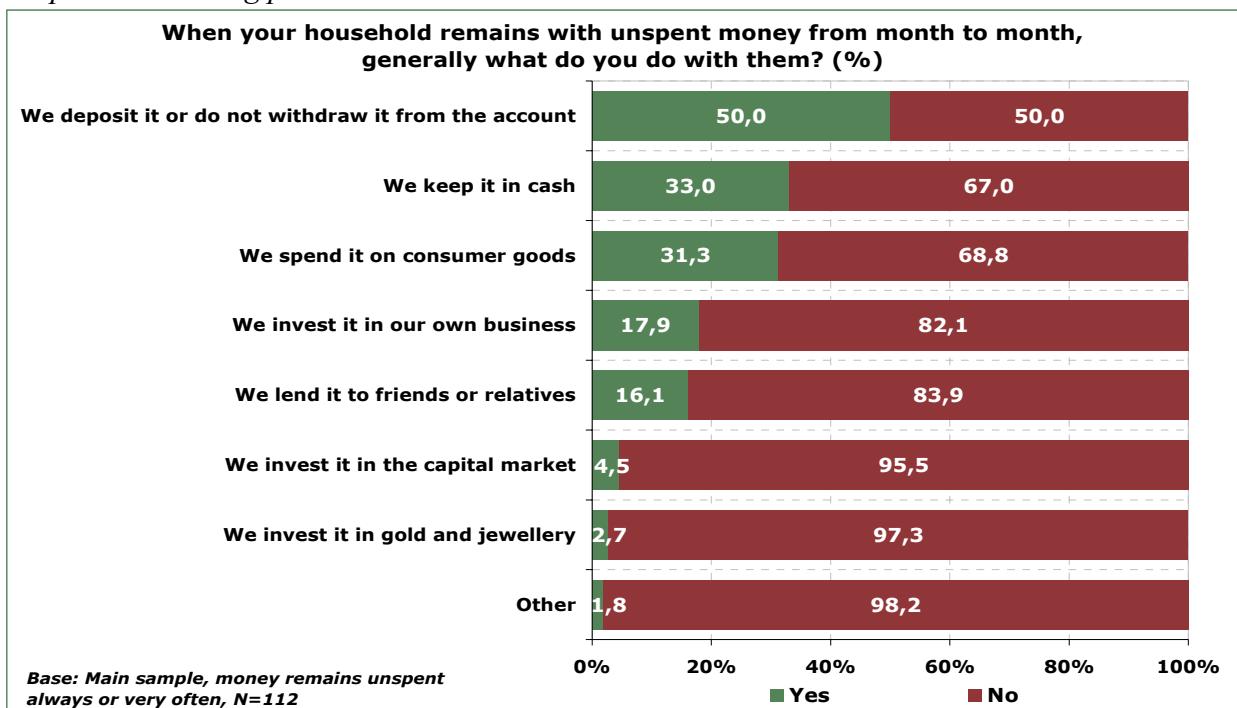

As Graph 4.2.2. shows the majority of the Bulgarian households manage to spend within the framework of their monthly income. The saving of larger sums and indebtedness as a result of systematic lack of money are isolated cases.

Two factors have the greatest impact on the way the households manage their monthly expenses. The first is of course the economic status. The second is the financial literacy. The better the knowledge of the citizens of financial products and services is, the better they manage their financial expenses.

8% of the country's adult population manage to save periodically some amount of their monthly income. The patterns of use of the unspent money show that the Bulgarians try to avoid the risk and prefer more secure options: bank deposits, keeping cash, buying consumer goods. Investments with higher potential profit, and respectively, greater risk, (such as investments in own business, capital market investments, in gold or jewelry etc) remain far behind. (See Graph 4.2.3).

Graph 4.2.3: Saving practices

Respondents with higher status from the larger cities who have higher confidence in the banks use more often the bank deposits. Conversely, the citizens with lower status continue to keep their saving in cash because they do not trust the banks.

One-fourth of the households periodically runs out of money before the end of the month. In this situation they most often minimize their spending (78%), or borrow without interest from relatives or friends (75%). In one-third of the cases the people opt for shopping on credit from a store. This practice exists mostly in the smallest settlements among the elder generations, the unemployed and especially the Roma.

The share of people in need who turn to the financial institutions is much smaller. The reason is not only in the public attitudes. In fact the distrust is in the reverse direction – from the institutions to the citizens. It is a common practice of the financial institutions to reject applications for loans coming from persons in difficult economic situation.

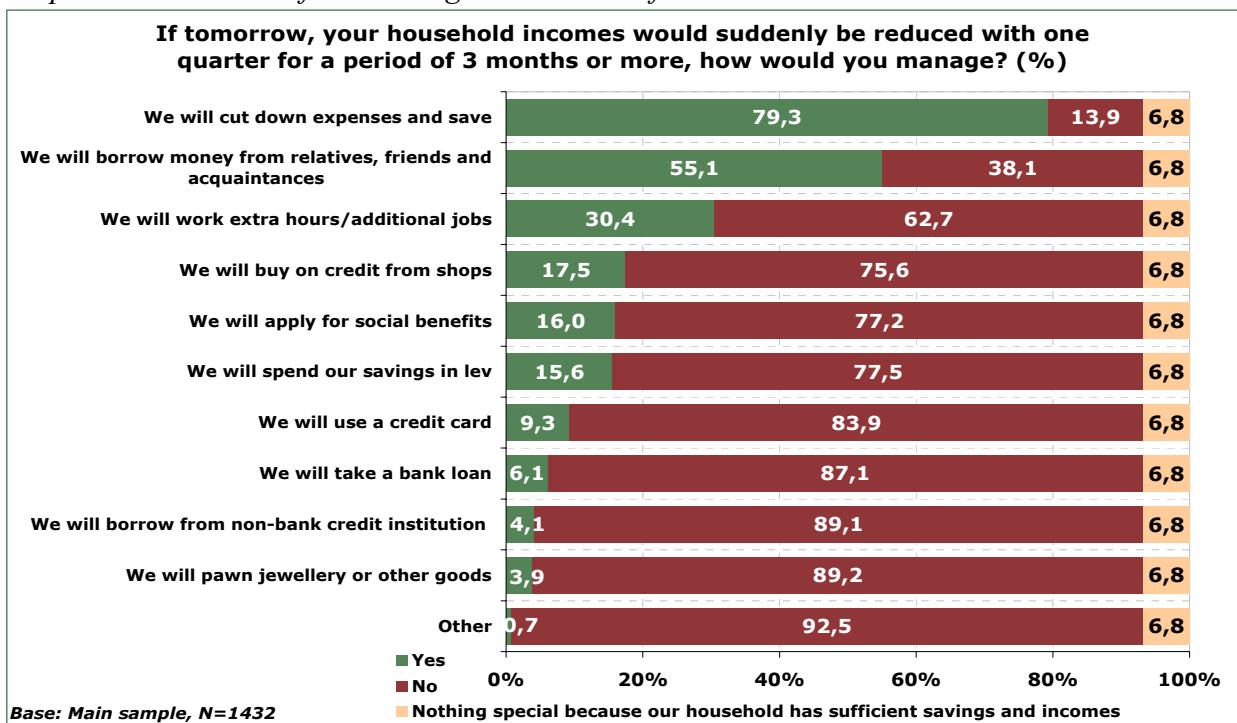

4.3. Financial strategies and investment activity

The financial strategies of the Bulgarian citizens are mostly short-term. They are more oriented at „handling the situation” than at accumulating additional wealth. This conduct is driven by several basic arguments:

- The majority (62%) of the citizens spends their monthly income in full and is unable to save due to its scarcity.
- The people prefer to prevent from indebtedness their household than to live “on credit”. The largest part (43%) asserts they have no hanging debts and among those who have the amount does not exceed double their monthly income.
- The income of 36% of the people has collapsed suddenly and considerably in the past three years. This problem had affected most the residents of smaller towns, the economically active generations and the low-qualification workers.

The leading factors in the income reduction are external and do not result from the households' budget management. In the majority of cases the income's drop is due to a job lost during the economic crisis (49%) and to a reduced or delayed salary (44%). However, even when their income has fallen sharply, the respondents try to avoid borrowing. Their strategies for handling the eventual grave financial crisis of the household is analogous to the measures currently applied to the penury situation: reduced expenses, loans from relatives, searching for a second job (*See Graph 4.3.1*).

Graph 4.3.1: Practices for handling the situation of reduced income

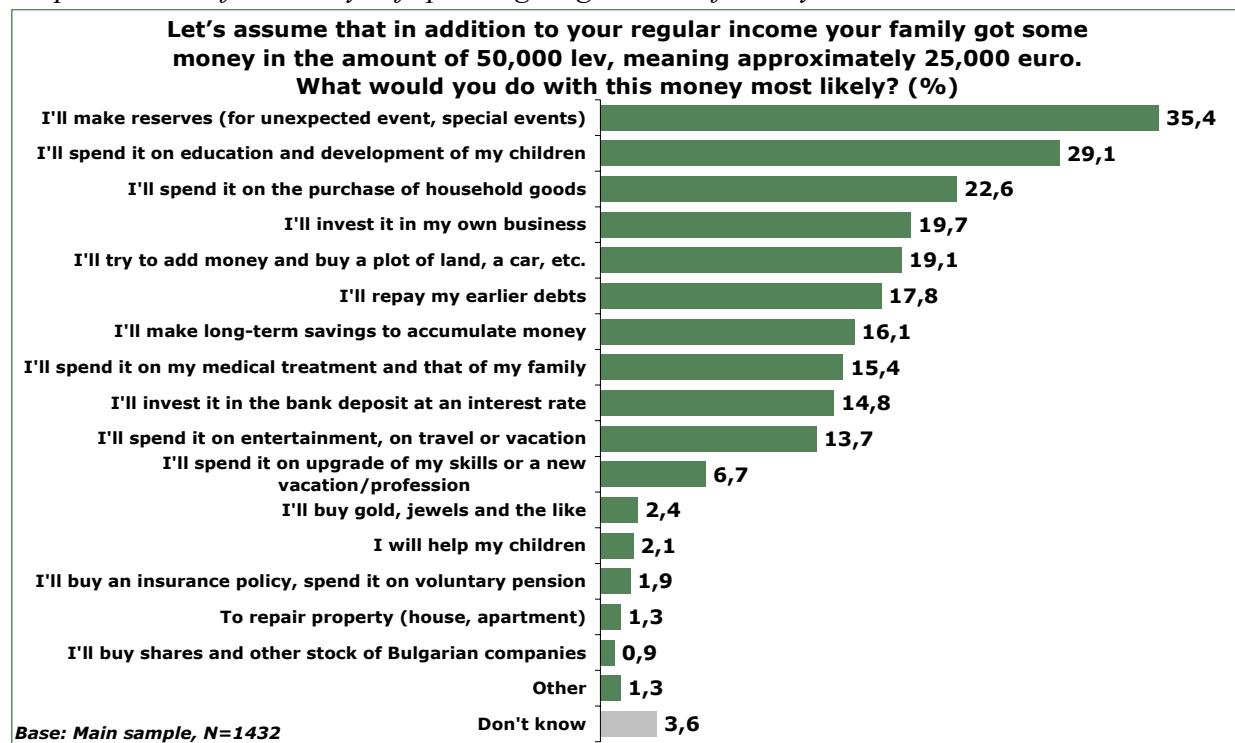

The most disturbing is the respondents' judgment of what period the household would be able to manage its need in case of significant income reduction. Only 11% believe they would be able to manage in this situation for more than six months – mostly the high-status residents of the big cities. The majority are of the opinion they would manage for one to six months. Again those are mostly people whose status is higher than the average – economically active persons performing high-qualification jobs and actively using financial products.

The financial strategies in the case of economic wealth also follow the current practices. The respondents' priorities cover: savings, securing the education of the children and purchasing

home goods. The lower-status residents of the smaller towns, the older generations and people with low income prefer to buy consumer goods than to make savings. (See Graph 4.3.2).

Graph 4.3.2: Preferred ways of spending larger sums of money

The intentions of the 16 – 17 year' old of the booster sample are for fast spending of the extra money for increasing their personal living standard – entertainment, travel or vacation (35%), buying a car or (27%) and home goods (23%).

Only the strategies of the economically active and wealthier at the moment social layers differ. They are more ready to start their own business or to invest in other enterprises that could bring higher profit in the long-term perspective.

At present the large majority of the Bulgarian citizens (90%) make no investments at all. Probably due to the economic crisis the trend in the investment activity is negative compared to five years ago. At the end of 2005 those who said they had never made investments were 77%. The proportion of Bulgarian citizens who had invested in real estate has reduced almost twice (from 13% to 6%). Even bigger is the reduction of investments in pension funds (from 5% to 1%). Similar to back in 2005 is only the level of investments in life insurance.

The highest-income users of financial services from the large urban centers are the most active in the investments.

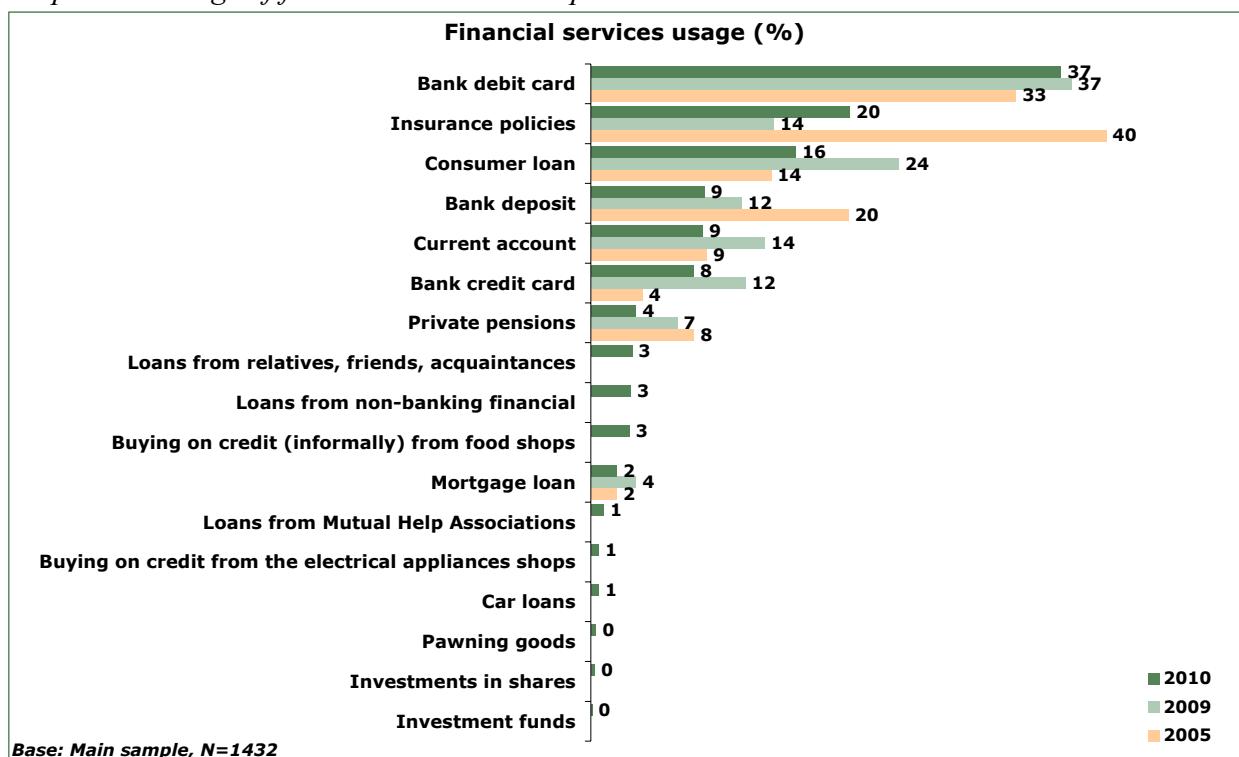

Just like five years ago the perception of a most profitable investment is the real estate. The opinions of the securities are controversial: on the one hand they rank second in profitability, but on the other they are on top as the instruments bearing the greatest risk. The opinion of the risk and profitability of pension funds and life insurance is identical: they are considered less profitable and at the same time bearing sufficient risk, which is why they are not yet attractive for the general public. The opinions are common for both, the poorly informed passive participants in the financial markets, and for the better informed more active users.

In the situation of economic crisis and low living standard it would not be realistic to expect any growth of the investment activity. Nevertheless one of the important objectives of the financial literacy program could be to strengthen the public awareness about 1/ the effective management of personal funds mechanisms; 2/ the accessibility, profitability and risks of financial products and 3/ last but not least, the role of the state as the market regulator.

5. USE AND INTEREST IN FINANCIAL PRODUCTS

The economic crisis has pulled back the consumption of financial products in 2010 to its end-2005 level. (*See Graph 5.1.*). During the past year the share of users of all financial services has shrunk. The drop is biggest in the credit products. This is the result of not only the attitudes of the users but also the policies of the banks that made the crediting conditions much stricter.

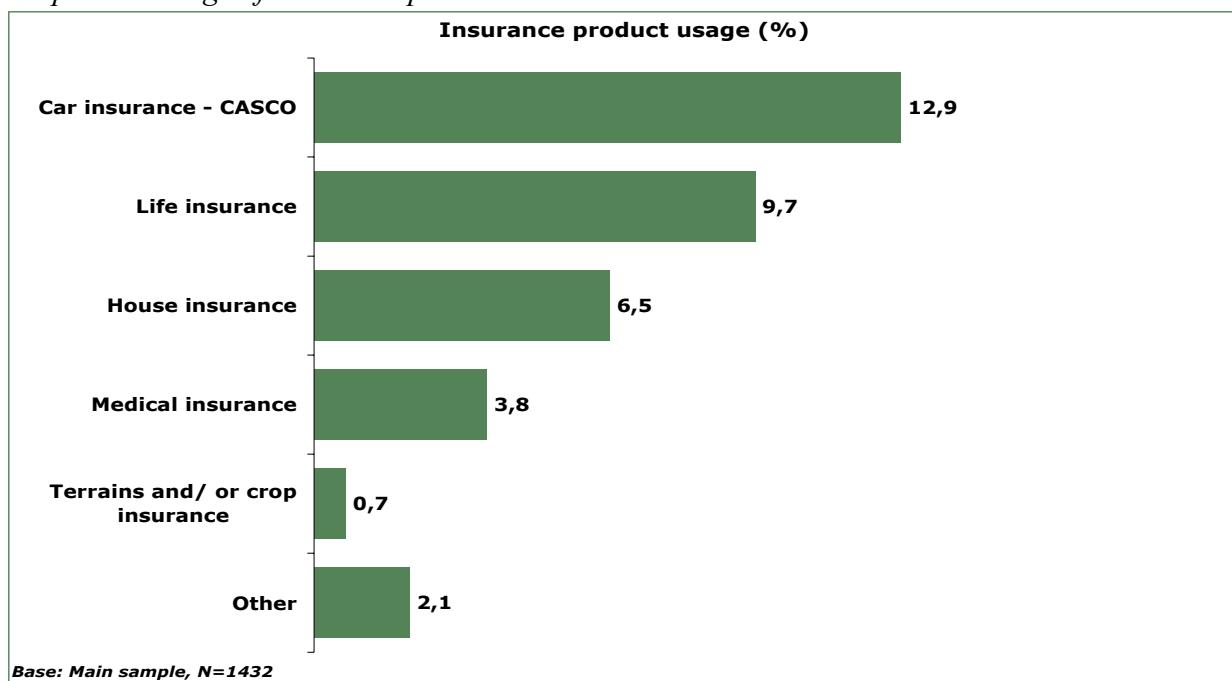

Graph 5.1.: Usage of financial services and products

Among the active users of financial services the high-status urban residents stand out: the age group 31 – 60 with high education and medium to high personal income. Most widely used are the debit cards, consumer loans, time deposits, payment accounts and credit cards.

More or less popular is also the insurance – 20% of the interviewed stated that a member of the household has an insurance. This is actually the result mostly of the “Casco” insurance that 13% of the households possess (*See Graph 5.2.*). Still, a huge part of the vehicles do not have a “Casco” (52% of the households said they own a car and just 13% that they have a Casco).

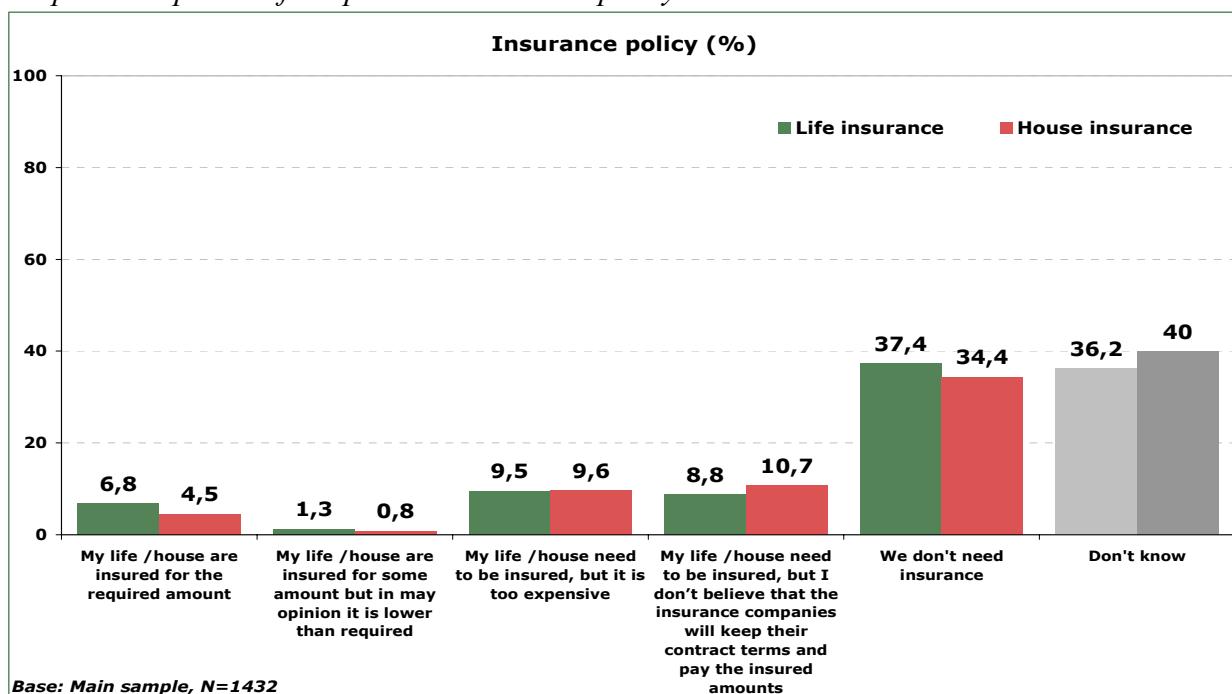

Graph 5.2: Usage of insurance products

Next in consumption are the “Life” and “Property” insurances. Although it has been making progress on the market in the last years, the medical insurance is still used by a limited portion of the citizens – 4%. In the majority of the cases the decision to get insured is a matter of personal choice. This is the case twice more often than policies, accompanying some other financial product.

The larger part of the Bulgarian citizens does not get insured not only because of lack of financial resources. Most of them are convinced they do not need such a product (*See Graph 5.3*). The insurance companies are confronted with the challenge to explain the benefit and affordability of their products to the customers because one of the leading arguments against the use of insurances is their high cost for the Bulgarian consumer.

Graph 5.3: Opinion of the personal insurance policy

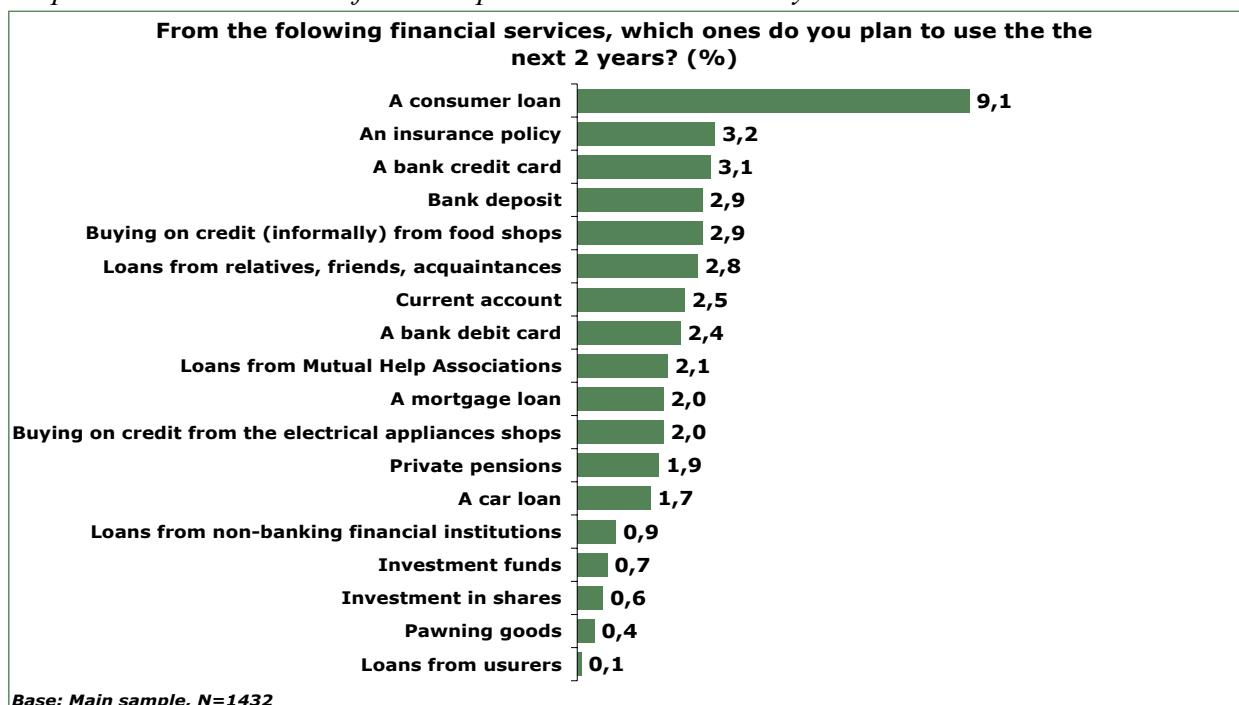

The users of financial services in Bulgaria still lack the confidence to withstand their rights before the financial institutions. 11% say they have experienced problems, mostly in the use of credit products such as consumer loans, credit cards and loans from non-banking institutions. In nearly half of the cases the users did not undertake any remedy actions and in another quarter of the cases they simply gave up the use of the respective product. A compliant to the service supplier or a state body was only filed by 18 percent of the affected.

In this sense acquainting the users with their rights is not only one of the preferred, but also one of the most urgent topics that have to be included in the financial literacy program. Otherwise the use of financial services is likely to remain underdeveloped and the trust in the financial institutions – low.

The short-term intentions of the users for the next two years are related to credit products – consumer loans and credit cards. The debit cards and the insurances are also among the planned financial priorities (*See Graph 5.4*).

Graph 5.4. Intention to use financial products in the next two years

The plans of the youngest (16 – 17 year' old) potential clients of the financial market cover mostly the bank cards and various forms of short-term consumer crediting in order to purchase personal belongings (ranging from accessories to a vehicle).

Judging by the citizens' intentions the strengthening of the financial consumption in short-term could come from the current participant in the financial markets - working urban middle class (*See Table 5.5*). The plans of lower social groups to use financial services are considerably more limited.

Table 5.5

	Intention to use financial services in next two years	
	Plans to use new services	Does not plan to use new services
Current use of financial services	Uses financial services at the moment	38%
	Does not use financial services at the moment	24%
<i>Average for the country</i>	<i>32%</i>	<i>68%</i>

6. KEY FINDINGS AND RECOMMENDATIONS

The survey results can be summarized in the following key findings:

- The assessment of the personal financial situation of the Bulgarians is predominantly negative. The average personal income of the respondents for the month of April was 389 lv. (around 200 euro). In spite of the growth in the GDP and in the purchasing power in the last several years only 10% feel confident and free in their consumption. Every second respondent can meet his or her daily expenses, but experiences more or less serious difficulties when long-term goods need to be bought. 38% barely manage to satisfy their basic needs. The two main sources of income are the salary (46%) and the pension (26%). One-tenth of the adult population says they have no personal income. There is a strong differentiation of incomes as a result of several factors: level of education, age, place of residence and social status. The income gap between the respondents living in the capital city and the rural areas is almost 3:1.
- The majority (73%) of the respondents say they make financial plans for their monthly income and expenses. The daily practices of the households show, however, substantial differences in the people's understanding on the accountancy of their financial resources. The largest part (39%) only have a general idea of their income and expenditure, 28% keep all records and account all their financial operations and another 22% simply keep the records without calculating what they earn and spend.
- In spite of the relatively low income level, the major part of the Bulgarian households (74%) manages to spend within their monthly income. Bigger savings and indebtedness are rather isolated cases. Two are the main factors that have strongest impact on the way the people manage their monthly expenses. The first is their financial situation. The second is their financial literacy. The better the citizens' awareness of the financial products and services is, the more effective they are in handling their financial expenses.
- 8% of the country's adult population manage to save some amount on their monthly income. The patterns of use of the unspent money show that the Bulgarians try to avoid the risk and prefer more secure options: bank deposits, keeping cash, buying consumer goods. The respondents from the bigger cities with higher education and income usually put their free money on a bank deposit and the people in the smaller towns with lower education and income keep it in cash. The young tend to spend it on consumer goods.
- A quarter of the households periodically run out of money before the end of the month. In such situation they normally cut down their expenses (78%) or borrow without interest from relatives or friends (75%). One-third, mostly residents of small settlements, shop on credit from the store. The share of people in need who turn to the financial institutions is much smaller. Even in the occasion of an unexpected significant reduction in their income (that happened to 36% of the households in the last three years) the Bulgarians avoid borrowing money. This is partly due to the cultural attitudes and partly – to institutions' practices. Very often they reject loans to people in difficult economic situation.
- The financial strategies in cases of additional finance resources are similarly focused on short-term objectives – small savings, securing the education of the children and purchasing household goods. 90% of the respondents do not invest at all. The initially weak investment activity has further decreased as a result of the economic crisis. The share of those people who invest in real estate has reduced to a half; the investments in private pension funds have

shrunk from 5% to 1% and only the share of people with life insurance has remained more or less unchanged (5%).

- The economic crisis has also decreased the overall consumption of financial services, which has dropped back to its end-2005 level. In April 2010 54% of the population use some financial service. More active users are the residents of the bigger cities in the age group 31 – 60, with higher education and medium to high personal income. The short-term intentions for the next two years are mostly for renewed use of bank credit products – consumer loans (9%), insurances and credit cards (3%), followed by debit cards (2.4%).
- In spite of the positive trend in the last five years, the trust in the main financial institutions remains relatively low. A large part of the Bulgarians, especially the young generations, is not familiar with the activity of either the private financial institutions or the state regulatory bodies in the field. The only institution that enjoys stable trust (37%) is the BNB. Among the private institutions relatively the most popular and best trusted are the banks, followed by the insurance companies. The greatest is the distrust to the pawn shops.
- The people's estimation of the quality of services offered by the financial institutions depend on the level they use them and they are aware of them. The most popular and best trusted are the services of the banks and insurance companies. The negative opinions of the services and products of leasing and securities companies, the private pension funds and the consumer crediting institutions prevail the positive ones two to three times. Between 42% and 52% of the general population and between 59% and 82% of the young people do not know them at all. The survey results show that, those who are excluded from the financial service market are more distrustful and critical in their attitude.
- Regardless of the declared distrust to most financial institutions and the Bulgarian economy in general, the expectations for stability of the Bulgarian currency (lev), and for the development of the financial markets remain positive. The attitudes to the market development of banks and insurance companies are predominantly optimistic. The fears are biggest towards the capital market and the non-banking financial institutions. Compared with five years ago, the confidence in the recovery and development of the markets most affected by the crisis – private pension funds and the capital market – is seriously shattered. From expectations for growth and development they have converged into estimations of stagnation and decline.
- An indirect indicator of trust to the most developed and used financial sector, the banking, is the fact that the main factors for respondents when choosing a financial institution are the specific conditions it offers (64%). The reputation (fame) of the institution that during the years of bankruptcies and instability of the banking system were leading factors are now lagging far behind with about 4 time lower percentages.
- Judging by the current citizens' intentions and plans, any short-term increase of the financial consumption would come mostly from the people with medium and higher status living in the urban areas and to a much lesser extent from the inclusion in this market of the poor, low educated and low qualified residents of the smaller towns and villages. The fact however that 25% of those not using any financial services intend to use such in the years to come shows, that the financial education of the “new users” is particularly important in order to strengthen their opportunities to use financial services without risking the financial stability of their families.

- The self-assessment of the Bulgarian citizens of their financial literacy is predominantly negative (27% say they have unsatisfactory knowledge and skills in this matter and 20% declare they have no at all). More than 60% of the residents of villages, the eldest population and the younger generations (16-17), the less educated, low qualified and unemployed assess their financial knowledge as very poor. The objective indicators measuring the financial literacy correspond to this assessment. Only 2% of the interviewed were able to give correct answers to all the eight questions aiming to check the basic financial literacy of the population. The majority of the interviewed have the skills to calculate a more profitable discount (66%) and a simply interest amount (53%), but calculating a complex interest on a deposit or a loan creates serious difficulties for most of the respondents. Furthermore, although in the last five years the number of people aware of the role of the state in guaranteeing the bank deposits has increased, their proportion remains relatively low (increase from 17% to 21%).
- The majority of the respondents are not familiar with their rights when using financial services. The poor knowledge goes hand in hand with the distrust in the adequate reaction of the institutions to an emerging problem. 39% of the people are not convinced their problem could find a fast solution, and 40% it could find a fair solution. Of the opposite opinion are 2.5 times less persons. Therefore half of those who had encountered a problem did not undertake any action and a quarter simply gave up on the product. A complaint to the service provider or to a state body was filed by 18 percent of the affected.
- The low awareness and trust of the Bulgarian citizens towards the financial institutions and services justify the necessity for a financial literacy program. Depending on the interest in the tested financial topics three priority areas were outlined: 1/ Topics related to basic financial knowledge – household budgeting, planning a loan, consumer rights, the opportunities of bank services, principles of the pension system etc. A broad group of citizens are interested in the above topics, mostly people with a lower economic and educational status, not using actively any financial services; 2/ Information about specific products and services. Interest in them was demonstrated by the urban residents, employees, people with medium income and status, using some financial services who would like to develop their consumption. 3/ Acquiring skills for financial goal-setting and planning, private pension funds, opportunities to join the capital market. The latter are the focus of the citizens with the best knowledge of financial matters. For them the participation on this market is a form of investment.
- The main sources of information used by the Bulgarian citizens are: television (90%), radio stations (35%), newspapers (20%), and for 16-17 year' old internet (74% - use it every day versus 29% for the main sample). In spite of the fast penetration of the world wide web in the country (its users have increased from 24% to 44% in five years), the huge part of the people with poor financial literacy, coming from the low-status social groups, do not use computers and internet and only pay attention to the television.
- Bulgarians are not active in the search of specific financial information. 35% never discuss financial services with friends and relatives. The financial institutions are as well not active in informing the people of their services and products. 57% have never talked with bank officers and 83% - with insurance agents.
- For the majority of the Bulgarians the financial information is too specialized and difficult to understand. Therefore, depending on the specific cases and needs, they use different sources of information. Thus for example those 53% of the Bulgarians who follow some

financial trends (mostly the fluctuations in the taxes, securities, pensions and inflation rate and, to a lesser extent, interest rates on loans and deposits), use mainly the media. When information about financial services is needed, the people prefer the brochures of the financial institutions and for a choice of a bank or other institution – “the advice of friends and relatives”.

- The absence of clear information preferences is evident in the people’s opinions of which will be the most appropriate training institution to implement a financial literacy program. The broad public has preference for the media and the state regulatory institutions, while the citizens more knowledgeable of financial matters are more in favor of the higher education institutions and independent financial consultants.

Recommendations

Based on the analysis and the key findings of the survey three priority target groups of a Financial Literacy Program could be outlined. In the following table we summarize the specific topics of interest, the information channels and the approaches to each one of them.

Groups:	Youth (16-17)	Approaches:	People with medium social status and income, employees, urban population	People with low social status and income, low education, rural population, pensioners and unemployed
1. Topic of interest	<ul style="list-style-type: none"> ■ What are the main bank services ■ Consumer rights and what to do when they are violated ■ How to differentiate between advertising and full objective information ■ What important information should one be aware of, when signing a contract with a financial institution ■ Planning and accountancies when using a credit card 	<ul style="list-style-type: none"> ■ How can I get a consumer or mortgage loan, ■ What insurance products to use ■ What indicators should one pay attention to, when comparing the offers of various banks and insurance companies, ■ How to differentiate between advertising and full objective information ■ Principles of the pension system ■ Private pension security funds and capital market 	<ul style="list-style-type: none"> ■ Family budget management, monthly financial accounts ■ What are the main bank services ■ Consumer rights and what to do when they are violated ■ What important information should one be aware of when signing a contract with a financial institution ■ Principles of the pension system 	<ul style="list-style-type: none"> ■ Family budget management, monthly financial accounts ■ What are the main bank services ■ Consumer rights and what to do when they are violated ■ What important information should one be aware of when signing a contract with a financial institution ■ Principles of the pension system
2. Information channels	<ul style="list-style-type: none"> ■ Internet, social networks, higher education institutions 	<ul style="list-style-type: none"> ■ Media – television, press, internet; brochures, consultants/experts 	<ul style="list-style-type: none"> ■ Media – television, radio; visits of NGO's representatives, financial officers 	<ul style="list-style-type: none"> ■ Media – television, radio; visits of NGO's representatives, financial officers
3. Rights when using financial services	<ul style="list-style-type: none"> ■ This group has very little knowledge of the financial institutions and in the same time is a promising new participant on this market. It badly needs to become more familiar with the main consumer rights – which are the main regulatory bodies, what are their powers, where and how to file a complaint; how to prepare it. 	<ul style="list-style-type: none"> ■ For this group it is important to increase its knowledge of: <ul style="list-style-type: none"> ■ the ways and channels to respond to an emerged problem ■ the consumer rights when using different financial services and institutions. 	<ul style="list-style-type: none"> ■ Due to its weak participation in the market of financial services, this group did not show any interest in those matters in general. The information on these topics should be accompanied by the explanation how to use the financial services. 	<ul style="list-style-type: none"> ■ Due to its weak participation in the market of financial services, this group did not show any interest in those matters in general. The information on these topics should be accompanied by the explanation how to use the financial services.
4. Strengthening the awareness of financial institutions and services	<ul style="list-style-type: none"> ■ Providing general information about the financial institutions – scope of work, opportunities and services provided. ■ Developing skills to search, to use and to compare financial information from different sources 	<ul style="list-style-type: none"> ■ More detailed information about the leasing companies, capital markets and non-banking consumer credit institutions. ■ More detailed and precise information about new services and combined use of products. ■ Developing skills to search, to use and to compare financial information from different sources 	<ul style="list-style-type: none"> ■ Building awareness of what services are offered by the different types of institutions. ■ Increasing the access of the population living in small settlements to wider range of financial services (opening branches and/or mobile bankers). ■ Learning people to follow basic financial information – inflation rate, taxes, securities, interest rates. 	<ul style="list-style-type: none"> ■ Building awareness of what services are offered by the different types of institutions. ■ Increasing the access of the population living in small settlements to wider range of financial services (opening branches and/or mobile bankers). ■ Learning people to follow basic financial information – inflation rate, taxes, securities, interest rates.

<p>5. Increasing the confidence in the financial institutions</p> <ul style="list-style-type: none"> The trust level in this group is quite high. The proper focus on this topic would be to provide information and build confidence to defend Consumers rights when using products and services. Active behavior of the insurance companies and the capital market to win the citizens' trust. 	<ul style="list-style-type: none"> Development of special modules for increasing the awareness and trust in the financial institutions and especially the role of the state in guaranteeing the citizens' deposits. More information and explanation of the role of the state in this field and which institutions should be addressed in the case of emerging problem (this group is very often the victim of fraud because of its ignorance of the institutions). Presentation of successful cases of persons who have defended their rights when using financial services – what they exactly did. More information and explanation of the role of the state in this field and which institutions should be addressed in the case of emerging problem (this group is very often the victim of fraud because of its ignorance of the institutions).
<p>6. Making more “user friendly” the use of financial services and the communication with the institutions</p>	<ul style="list-style-type: none"> Special products tailored for the youth to teach them plan and monitor the risk when using financial services Presentations of the bank products in the schools, the universities, etc.
<p>7. Improving the investment culture</p>	<ul style="list-style-type: none"> The young are strongly inclined to spend their income on consumer goods and not to invest money. The proper focus for them on this topic would be how to plan, calculate and make investments with potential higher profit

ANEXES

Financial literacy and financial services in Bulgaria

4. Credit interest rate and the credit cost	4	4	4
5. Gifts and advertising campaigns	5	5	5
6. Other.....	6	6	6
9. Don't know	9	9	9

One answer only

AO10. If you considered taking a credit from a bank, what would you prefer?	1. A credit in lev 2. A credit in a foreign currency 3. I wouldn't take any credit 9. Don't know
<i>Do not read answer 3</i>	

AO11. When taking a credit from a bank, what would you give more importance to...?	1. Commissions charged by the bank 2. Credit interest rates 3. Both, commissions charged by the bank and credit interest rates 4. Annual Percentage Rate 5. I wouldn't take any credit 9. Don't know
<i>Do not read answer 5</i>	

AO12. When do you think buying on credit is justified?	1. If a shop has sales for the goods you need
<i>Here the credit refers to the use of a credit card, the use of a consumer credit or buying on credit (informally - „pe caiet“) from a shop</i>	2. If a person needs to pay for education which would allow to get a better paid job
	3. If a person really needs a vacation but does not have money at the moment
	4. Other, namely.....
	5. I wouldn't buy on credit in any circumstance – <i>Do not read</i>
	9. Don't know

B) Information on Financial Services

ISF1. What tendencies from the ones given below you follow personally?	Yes	No	If Yes ISF1a. What is the main source of information:
a. Changes in the property market	1	2	1. Advertising
b. Changes of quotations and indices in the capital market	1	2	2. Newspapers, magazines, TV programs specializing on financial issues
c. Changes of interest rates on deposits	1	2	3. Specialized web sites
d. Changes of interest rates on credits	1	2	4. Bank officers, employees of insurance and management companies, during a personal visit or by phone
e. Changes in the inflation rate	1	2	5. Independent financial consultants or brokers
f. Changes in the level of public pensions, benefits and tax exemptions	1	2	6. Friends and acquaintances
g. Price fluctuations for oil, gold, metals, etc.	1	2	ISF1X. <input type="checkbox"/> ISF1Y. <input type="checkbox"/>

ISF2. Are you aware of the Consumer Protection Commission activity concerning financial services?	1. Yes	2. No	9. Don't know
--	--------	-------	---------------

ISF3. During the last 12 months, how many visits / personal contacts or through phone did you have with...?	Daily	Few times a week	Few times a month	Once a month or less	Never
a. bank officers or bankers	4	3	2	1	0
b. representatives of insurance companies / private pension fund	4	3	2	1	0
c. representatives of securities companies (for share deals)	4	3	2	1	0
d. independent financial advisers or brokers	4	3	2	1	0
e. representatives of a non-banking financial institution , such as Jetcredit or T.B.I. Credit	4	3	2	1	0
f. pawn houses personnel	4	3	2	1	0

ISF4. When you meet your relatives, colleagues, friends, how often do you talk about financial institutions and services?	Daily	Few times a week	Few times a month	Once a month or less	Never
	4	3	2	1	0

ISF5. In the last five years, how often do you compare the terms and conditions for provision of financial services by various companies before you buy such a service?

4. Always	3. Sometimes	2. Rarely	1. Never	97. I do not use any financial service <i>Do not read</i>	99. Don't know
-----------	--------------	-----------	----------	--	----------------

ISF6. In the last five years, what sources of information do you pay attention to when choosing a company to buy a service from (pension plan, investment, savings, credit, etc.)? Multiple Response

1. Advertisements	7. Advice of friends and relatives
2. Information materials of financial companies on their tariffs and services of various types	8. Internet resources
3. Advice of consultants working for providers of a required service	9. Education programs on the radio and television
4. Recommendations of independent financial consultants or brokers	10. Specialized information center/ call center
5. Analytical materials published in mass media	11. Other.....
6. Employer's advice	99. Don't know

BG8. How would you prefer to receive information on financial matters? Multiple Response

1. Advertisements	7. Advice of friends and relatives
2. Information materials of financial companies on their tariffs and services of various types	8. Internet resources
3. Advice of consultants working for providers of a required service	9. Education programs on the radio and television
4. Recommendations of independent financial consultants or brokers	10. Specialized information center/ call center
5. Analytical materials published in mass media	11. Other.....
6. Employer's advice	99. Don't know

C) Financial literacy

CSF1. Do you consider yourself a financially literate person?

5. Excellent	4. Good	3. Satisfactory	2. Unsatisfactory	1. No knowledge and skills	9. Don't know knowledge and skills
--------------	---------	-----------------	-------------------	----------------------------------	--

CSF2. Let's assume that you deposited 10,000 lev in a bank account at 8% annual interest rate. How much money will you have in your account in 2 years if you do not withdraw from or add to this account any money?

1. More than 18,000 BGN 2. Exactly 18,000 BGN 3. Less than 18,000 BGN 9. Don't know

CSF3. Let's assume that you deposited 10,000 lev in a bank account at 10% annual interest rate. The interest will be earned at the end of each year and will be added to the principal. How much money will you have in your account in 5 years if you do not withdraw either the principal or the interest?

1. More than 15,000 BGN 2. Exactly 15,000 BGN 3. Less than 15,000 BGN 9. Don't know

CSF4. Imagine, than you deposited the money in a bank account at 8% interest rate, while the annual inflation rate was 10%. Do you think the money from your account can buy more or less, or the same amount of goods and services on average now as a year ago?

1. More than a year ago 2. The same 3. Less than a year ago 9. Don't know

CSF5. Let's assume that in 2012 your income is twice as now, and the consumer prices also grow twofold. Do you think that in 2012 you will be able to buy more, less, or the same amount of goods and services as today?

1. More than today 2. Exactly the same 3. Less than today 9. Don't know

CSF6. Let's assume that you saw a TV-set of the same model on sales in two different shops. The initial retail price of it was 1,000 lev. One shop offered a discount of 150 lev, while the other one offered a 10% discount. Which one is a better bargain – a discount of 150 lev or 10%?

1. A discount of 150 lev 2. There are the same 3. A 10% discount 9. Don't know

CSF7. Let's assume that you took a bank credit of 10,000 lev to be paid back during a year in equal monthly payments. The credit charge is 600 lev. Give a rough estimate of the annual interest rate on your credit.

1. 3% 2. 6% 3. 9% 4. 12% 9. Don't know

CSF8. If a citizen has a deposit in a Bulgarian bank and this bank becomes bankrupt, do you know what maximum level of a deposit is entirely insured by the government?

- | | | | | | |
|---|---|---|--|--|---------------|
| 1. The government does not insure the bank deposits | 2. The equivalent in lev of 30.000 euro | 3. The equivalent in lev of 50.000 euro | 4. The equivalent in lev of 100.000 euro | 5. The government insures all bank deposits in their full amount | 9. Don't know |
|---|---|---|--|--|---------------|

CSF9. If a citizen owns shares in the unit fund, and the value of shares plummeted because of a large scale financial crisis, what is an approximate level of losses insured by the government?

- | | | | | | |
|--|---|---|--|---|---------------|
| 1. The government does not insure against losses from the reduction of value of the unit fund shares | 2. The equivalent in lev of 30.000 euro | 3. The equivalent in lev of 50.000 euro | 4. The equivalent in lev of 100.000 euro | 5. – The government insures all unit fund shares in their full amount | 9. Don't know |
|--|---|---|--|---|---------------|

CSF10. In which of the following cases it is appropriate for the government to compensate individuals for the losses on the financial market? <i>Multiple response</i>	1. The bank which went bankrupt
	2. Shares of a unit fund whose market value plunged
	3. Shares of a private company, and the value of shares dropped significantly
	4. Apartment prices dropped at the moment when one needs to sell them
	5. None of the above
	99. Don't know

ISF5A. Which of the following organizations do you see as the most suitable to deliver financial literacy program in Bulgaria? Choose up to 3 answers

1. A commercial bank	5. Government entities regulating these markets
2. Pension fund and/or insurance companies	6. Higher education institutions of economic and financial profile
3. Unit investment funds (management companies)	7. Independent financial consultants
4. Non-government organizations or public organizations involved in consumer rights protection	8. Mass media (journalists and TV presenters) 9. Other..... 99. Don't know

ISF6A. Which of the following aspects of managing personal finances do you believe that should necessarily be part of a financial training course for people...?	Yes	No	Don't know
a. How to form one's own financial targets and draw a personal current financial plan	1	2	9
b. What to do not to get up to one's neck in debt when using credits	1	2	9
c. How to plan purchases of durables (car, apartment, dacha) and evaluate one's abilities to implement them	1	2	9
d. How does the pension scheme work and what methods are available to secure one's old age income	1	2	9
e. Banking services – current accounts, saving deposits, and plastic cards	1	2	9
f. Consumer credits to purchase goods and services	1	2	9
g. Mortgage loans	1	2	9
h. Insurance and insurance products	1	2	9
i. Private pension funds	1	2	9
j. Capital markets, stock and unit fund shares	1	2	9
k. Sources of information on financial services, how to interpret the information and how to differentiate the advertising information from the objective one	1	2	9
l. What parameters are used to compare the services offered by banks and other financial companies	1	2	9
m. What consumer rights protection laws are available and what one needs to do when one's consumer rights are violated	1	2	9
n. What information should a user pay attention to when signing a contract with a bank or another financial company	1	2	9

D) Managing household finances

GF1. In your household do you usually have a financial plan, thus you know how to cover current monthly expenses?	1. Yes	2. No	9. Don't know
--	---------------	--------------	----------------------

GF2. Is your household used to keeping records of income and expenditures?	1. Yes, we keep records of everything, entering all revenues and all expenditures
	2. Yes, we keep records of everything, but not all revenues and expenditures are entered
	3. No, we don't keep records of everything, but we know in general how much money is received and spent during a month.
	4. No, we don't keep records of family's resources, and we don't have even a vague idea of how much money is received and spent during a month
	9. Don't know

GF3. How often during the last 12 months your household....	Always	Very often	Sometimes	Very rarely	Never	Don't know
a. remained with unspent money from month to month	5	4	3	2	1	9
b. remained without money from month to month	5	4	3	2	1	9
c. spent in a month exactly the money earned in the previous month	5	4	3	2	1	9

If money spent = money earned always or very often (codes 5 and 4 at GF3c) ➔ GO TO GF4

If left without money always or very often (codes 5 and 4 at GF3b) ➔ GO TO GF3Y

If money remains unspent always or very often (codes 5 and 4 at GF3a) ➔ GO TO GF3X

GF3X. When your household remains with unspent money from month to month, generally what do you do with them?

	Yes	No		Yes	No
a. We spend it on consumer goods	1	2	e. We lend it to friends or relatives	1	2
b. We keep it in cash	1	2	f. We invest it in our own business	1	2
c. We deposit it or do not withdraw it from the account	1	2	g. We invest it in gold and jewellery	1	2
d. We invest it in the capital market	1	2	h. Other.....	1	2

GF3Y. When your household runs out of money from month to month, generally, what do you do?

	Yes	No		Yes	No
a. We cut down expenses	1	2	g. We spend our savings in lev	1	2
b. We borrow money from relatives, friends and acquaintances without interest	1	2	h. We exchange in lev our savings in foreign currency	1	2
c. We borrow money from relatives, friends and acquaintances with interest	1	2	i. We borrow from a bank	1	2
d. We buy on credit (informally - „pe caiet“) from shops	1	2	j. We use a credit card	1	2
e. We borrow from non-banking financial institutions (Jet Credit, T.B.I., etc.)	1	2	k. We work extra hours or do additional jobs	1	2
f. We pawn jewellery or other goods	1	2	l. Other.....	1	2

GF4. Please tell us whether there are such households among your acquaintances or friends who used to be relatively well-to-do and then suddenly encountered financial problems? If so, then what was the reason in your opinion?	1. Yes, because someone in the household has lost his job due to financial crisis
	2. Yes, because of unfortunate series of events (a sudden death or loss of a job by a breadwinner, a divorce, an accident, etc.)
	3. Yes, because of a wrong money management or lack of ability to plan its finances (they were buying too much, took too many credits, did not plan their future, lived for the moment, etc.)
	4. Yes, other.....
	5. I do not know such families
	9. Don't know

GF5. Did your household experience an unexpected significant reduction of your income over the last three years?	1. Yes	2. No	9. Don't know <i>GO TO GF6</i>
---	--------	-------	-----------------------------------

If Yes (code 1 at GF5)

GF5A. What was the reason for this reduction of your income?

	Yes	No		Yes	No
a. Loss of employment due to economic crisis	1	2	d. Breakup, separation or divorce	1	2
b. Loss of employment because of an accident, illness or disability	1	2	e. Retirement of the main breadwinner	1	2
c. Considerable reduction of salary, or delays with salary payment	1	2	f. Other.....	1	2

GF5B. How did you (your family) manage to make the ends meet when your income suddenly dropped?

	Yes	No		Yes	No
a. We cut down expenses	1	2	g. We spend our savings in lev	1	2
b. We borrow money from relatives, friends and acquaintances without interest	1	2	h. We exchange in lev our savings in foreign currency	1	2
c. We borrow money from relatives, friends and acquaintances with interest	1	2	i. We borrow from a bank	1	2
d. We buy on credit (informally - „pe caiet“) from shops	1	2	j. We use a credit card	1	2
e. We borrow from non-banking financial institutions (Jet Credit, T.B.I., etc.)	1	2	k. We work extra hours or do additional jobs	1	2
f. We pawn jewellery or other goods	1	2	l. Other.....	1	2

GF6. How often during the last 12 months your household had to borrow to pay back your other debts?	Always	Very often	Sometimes	Very rarely	Never	Don't know
	5	4	3	2	1	9

GF6a. If tomorrow, your household incomes would suddenly be reduced with let's say one quarter for a period of 3 months or more, how would you manage?

	yes	no		yes	No
0. Nothing special because our household has sufficient savings and incomes	1	2	6.We will use a credit card	1	2
1. We will cut down expenses and save	1	2	7.We will pawn jewellery or other goods	1	2
2. We will borrow money from relatives, friends and acquaintances	1	2	8.We will spend our savings in lev	1	2
3. We will buy on credit ("pe caiet") from shops	1	2	9.We will work extra hours/additional jobs	1	2
4. We will take a bank loan	1	2	10.We will apply for social benefits	1	2
5. We will borrow from non-bank credit institution (Jet Credit, T.B.I, etc.)	1	2	11.Other.....	1	2

GF6b. How long do you think you can manage in this situation?

1) less than a week	2) one week-less than 1 month	3) 1-3 months	4) 3-6 months	5) 6-12 months	6) One year or more	9) Don't know
---------------------	-------------------------------	---------------	---------------	----------------	---------------------	---------------

GF7A. Comparing to your total monthly household income, approximately how much are your debts? These are non-serviced debts (e.g. non-serviced credits from non-bank financial institutions, public utilities, debts from friends or relatives, from shops)? Exclude loans with collateral to banks and leasing for cars or properties

1. Less than the monthly income	2. approx. 1-2 monthly incomes	3. approx. 2-3	4. approx. 4-6	5. approx. 7-12 monthly incomes	6. More than the annual income	9. Don't know
---------------------------------	--------------------------------	----------------	----------------	---------------------------------	--------------------------------	---------------

GF8. Let's assume that in addition to your regular income your family got some money in the amount of 50,000 lev, meaning approximately 25,000 euro. What would you do with this money most likely? Choose maximum 3 answers, Show card

I'll spend it on the purchase of household goods (furniture, clothes, home electric appliances, etc.)	1
I'll try to add money (through borrowing, e.g.) and buy a plot of land, a car, etc.	2
I'll make long-term savings to accumulate money for more expensive things (a house, apartment, expensive car, etc.)	3
I'll make reserves (for unexpected event, special events, for a rainy day, etc.)	4
I'll repay my earlier debts	5
I'll spend it on entertainment, on travel or vacation	6
I'll spend it on education and development of my children	7
I'll spend it on upgrade of my skills or training for a new vacation/profession	8
I'll spend it on my medical treatment and that of my close family	9
I'll invest it in my own business	10
I'll buy an insurance policy for myself or the family, spend it on voluntary pension (through a pension fund)	11
I'll buy gold, jewels and the like	12
I'll invest it in the bank deposit at an interest rate	13
I'll buy shares and other stock of Bulgarian companies, buy government bonds (obligations and the like)	14
Other.....	15
Don't know	99

GF9. Does your household usually manage your everyday revenues?	1. I try to save something and spend the rest of the money on the everyday needs
	2. I spend money on the everyday needs and save the rest
	3. I spend all the money on everyday needs and do not save anything
	9. Don't know

If household saves (codes 1 and 2 at GF9)

GF9A. Comparing to your total monthly household income, approximately how much are your savings?

1. Less than the monthly income	2. approx. 1-2 monthly incomes	3. approx. 2-3	4. approx. 4-6	5. approx. 7-12 monthly incomes	6. More than the annual income	9. Don't know
---------------------------------	--------------------------------	----------------	----------------	---------------------------------	--------------------------------	---------------

GF9B. What are the reasons to have made savings? Multiple response

1. For a rainy day, for unexpected expenses	6. I like saving rather than spending money
2. For retirement	7. This is a family tradition
3. To leave something for children to inherit	8. Other.....
4. To get income in the form of interest, increased market value of assets, etc.	99. Don't know
5. To increase my living standards in the future	

If household does not make savings (code 3 at GF9)

GF10. What are the reasons?

Multiple response

1. I don't trust financial institutions	4. I cannot resist the temptation to spend the money on shopping
2. I cannot do this because of a low income	5. Other.....
3. I don't see the point in making savings	99. Don't know

BG9. Have you personally invested in the last five years in?	1. Securities
	2. Real estate
	3. Pension fund
	4. Life insurance
	5. Other/please specify/
	6. I have not invested any money

BG11. Which of these investment options do you consider the most profitable? (arrange them in an order of priority, marking with 1 the most profitable, and with 4 the least profitable)

BG12. And which one of them has the highest risk? (arrange them in an order where 1 has the highest risk, and 4 has the lowest risk)

	BG11. Most profitable	BG12. Highest risk
1. Securities		
2. Real estate		
3. Pension fund		
4. Life insurance		
5. Other/please specify/ (only if code 5 at BG9)		
Don't know	99	99

GF 14. What services of the above would you like to know better or get additional information about?

- a. Consumer credit
- b. Bank current account
- c. Bank deposit account
- d. Currency exchange
- e. Credit card
- f. Bank card
- g. Mortgage loan
- h. Insurance policies
- i. Investments in unit funds
- j. Investments in companies' stock
- k. Private pension fund policies
- l. None of the above
- m. I find it difficult to answer this question

E) Data regarding the household's members

Attention! Section A to be completed with data regarding all household members. The data regarding the respondent (*the person mentioned in the sampling list*) is written in the first line of the table. (*CPERS = 01*). Then, persons aged 15+ and children aged 0-14 are registered.

A	4. Ethnicity	5. Highest level of education achieved	6. Main occupational status in the present
	1.Bulgarian 2.Turkish 3.Roma 4.Armenian 5.Other	1. No school 2. Primary (1- 4 classes) 3. Gymnasium (5-8 classes) 4. First level of high school (9-10 classes) 5. General high school (9-12 classes) 6. Professional high school (9-12 classes) 8. College degree 9. University (<i>including Master degree</i>) 10. Doctoral studies	1. Employee 2. Other status of employed persons (<i>daily worker, black market worker etc.</i>) 3. Business owner 4. Self-employed person in non-agricultural activities (include PFA, AF, liberal professionals) 5. Self-employed person in agricultural activities 6. Family helper 7. Registered as unemployed 8. Unregistered unemployed (<i>no longer receives an unemployment allowance / support allowance and looks for work</i>) 9. Retired - due to age 10. Retired - other causes 11. Pupil, student 12. Housewife 13. Person unable to work 14. Another status of non working person (<i>pre-school, dependant</i>)
		Attention! Mention the highest degree achieved and not ongoing studies.
