Sampling

Sampling Procedure

The selection of NGO relied on a two-stage sampling design. The initial sample frame was constructed by merging a list of known NGOs from the government's NGO Affairs Bureau (NAB), a list of members of the Association of Development Agencies in Bangladesh (ADAB), and lists of the branches of the larger NGOs. On the basis of that synthesized list, 35 political-administrative units, thanas, were selected according to a procedure in which the probability of selection was proportional to estimated size, where size was understood as the share of registered NGOs in the thana. Before selecting NGOs to interview in each thana, survey interviewers conducted a field enumeration of the actual number of NGOs operating in the selected thanas. Employing that updated list based on field enumeration, NGOs were randomly selected in each thana on the basis of a stratified sampling procedure that assured statistically useful sub-samples among NGO types: "big" NGOs that had over 1,000 branches across the country (BRAC and ASA), "big" NGOs that conducted field operations in more centralized branches (Proshika and Caritas), and other typically "small" NGOs.

The decision to obtain representative subsamples of the large and small NGOs was based on the hypothesis that small NGOs might exhibit different governance structures, have access to fewer resources, and engage in different activities than the large NGOs. There is obviously a continuum between large and small NGOs; the decision was made to obtain statistically representative sub-samples of the four large NGOs named above because they are generally considered to have a relatively large "market share" in the sector, and because the government's Bangladesh Bureau of Statistics (BBS) made a similar distinction in its 2000 Household Income and Expenditure Survey (HIES), which distinguished between the existence of those four NGOs and other NGOs.

Although the community questionnaire of the HIES also inquired about Grameen Bank in its section on NGOs, branches of Grameen Bank were not included in the present survey of NGOs because Grameen Bank is not actually incorporated as an NGO.

THE SAMPLE FRAME AND THE SAMPLE

The initial list consisted of 6,559 NGOs and NGO branches in Bangladesh. The number of NGOs in a given thana ranged from a minimum of one (in 17 thanas) to a maximum of 192 (in the thana of Mohammadpur in metropolitan Dhaka).

The mean number of NGOs per thana was 15.1, and the median was 12. Of the 6,559 NGO offices, some 1,456 consisted of BRAC branches, 1,186 were ASA branches, 125 were Proshika branches, and 98 were Caritas branches. A large percentage (79%) of the small NGOs were also organized into headquarters and branch offices. Among the small NGOs with a large number of branches were Buro (56 sites), Family Planning Services and Training (51 sites), Dhaka Ashania Mission (41 sites), and Esdo (41 sites).

On average, the number of NGOs based on the field enumeration exceeded the initial list by 21%. One question with both policy and theoretical interest is the extent to which Bangladeshi NGOs are serving the needs of the poorest or most needy in the country. One way to address the question (though it has limitations because many NGOs serve clients outside the communities in which they are located) is to examine the concentration of NGOs in the poorest or most needy areas of the country. Income data from the preliminary returns of the 2001 census permitted an analysis of NGO concentration in a given thana as a function of average household income in that thana.

NGO concentrations per capita were lowest in the poorest thanas in the sample, suggesting that NGOs are not locating in the poorest regions of the country. It is also possible, of course, NGOs were targeting not poor thanas per se but poor areas within the thanas. To analyze that possibility, we analyzed NGO concentration per capita by community wealth quintile, where community wealth was constructed using the first principal component of three community wealth measures asked of participants in the focus group discussions (percentage of households in the community with televisions, cement floors, and a resident in paid employment). The concentration of NGOs per capita was relatively high in the second lowest wealth quintile but lowest in communities in the poorest quintile.

Although the results here should be interpreted with caution because they are from a random sample of only 35 thanas, they are consistent with other findings that NGO location decisions in Bangladesh are not targeting the poorest communities.

As noted above, some of the small NGOs in the sample were themselves relatively large, and included organizations with a headquarters and branch structure. Using appropriate sample weights that adjust for the frequencies of NGOs in the sampled thanas as compared to their thana frequencies in the initial synthesized list, we were able to estimate the relative percentages of NGO types in the country. Note that even among the stratum of small NGOs, a branch-headquarters structure was far more prevalent than stand-alone organizations, and that branches of international NGOs were relatively

rare in the country.

DATA COLLECTION NOTES

Survey enumerators collected the data from March to May 2003. In fact, they applied two questionnaires to each selected NGO—one to the manager or director of the NGO and whose results are reported in this paper, and another one to a focus group of randomly selected individuals in the immediate community where the NGO was operating, the results of which are being reported separately.

File: BGD_2003_NGO_v01_M

We would like to get an idea of the value of the services provided by [NGO]. Suppose that recipients of the service had to pay the market price of the services you offer (that is, the price charged by the private sector for similar services of similar quality). Abstract from advocacy, networking and raising awareness, whose value cannot be assessed. Further suppose that recipients had the means to pay the full market price. In your opinion, how much revenue would [NGO] derive from the sale of its services? [Enumerators: work with the respondent through each service they provide. Identify a comparable service or good provided by the private sector. Assess the price charged by private providers in the area covered by the project (if possible). Then multiply by the number of beneficiaries. Write down your calculations below. Multiplication and addition can be done after the interview is over.]

[Filling the staff and volunteers table requires asking a variety of questions to obtain the accurate information. A good way to proceed is to begin with the last row, totals. First ask what is the total number of [NGO]'s paid staff. Then ask what is the total number of volunteers. Then ask whether [NGO] has religious staff. If Yes, how many. Religious staff includes all people having taken religious vows such as nuns, sisters, pastor, minister, priest, etc. They must be counted separately from paid staff and volunteers.]

Once you have the totals, break them down into part-time and full-time. After you obtain totals for the first 5 columns, break down these totals by category. First ask, of the full-time salaried staff, how many people are involved in the management of [NGO]. Examples are directors, country representative, team leader, etc. Then ask whether they are full-time salaried, part-time salaried, etc. Then ask about the total number of other staff and volunteers. Then split the total into what we have decided to call professional, clerical, and other staff. The 'professional' category includes all staff and volunteers directly involved in providing services, advocacy, etc, but are Not involved in the management of [NGO]. Examples are program coordinators, teachers, trainers, nurses, loan officers, grant officers, etc. The 'clerical' category includes all staff and volunteers involved in the administration of [NGO]. Examples include secretaries, accountants, and office assistants. The 'other' category includes all other support staff and volunteers such as guards, gardeners, drivers, and cleaners. Repeat the same questions for part-time salaried staff, etc. Make sure you include staff in all the branches and offices of [NGO], i.e., all the people paid by [NGO]. Do Not include people 'on contract', that is, people hired for less than one month to perform a specific task. Staff on secondment are salaried staff working for [NGO] who are Not paid by [NGO] but by another NGO or organization.]

Post question

[Filling the staff and volunteers table requires asking a variety of questions to obtain the accurate information. A good way to proceed is to begin with the last row, totals. First ask what is the total number of [NGO]'s paid staff. Then ask what is the total number of volunteers. Then ask whether [NGO] has religious staff. If Yes, how many. Religious staff includes all people having taken religious vows such as nuns, sisters, pastor, minister, priest, etc. They must be counted separately from paid staff and volunteers.]

Once you have the totals, break them down into part-time and full-time. After you obtain totals for the first 5 columns, break down these totals by category. First ask, of the full-time salaried staff, how many people are involved in the management of [NGO]. Examples are directors, country representative, team leader, etc. Then ask whether they are full-time salaried, part-time salaried, etc. Then ask about the total number of other staff and volunteers. Then split the total into what we have decided to call professional, clerical, and other staff. The 'professional' category includes all staff and volunteers directly involved in providing services, advocacy, etc, but are Not involved in the management of [NGO]. [Filling the staff and volunteers table requires asking a variety of questions to obtain the accurate information. A good way to proceed is to begin with the last row, totals. First ask what is the total number of [NGO]'s paid staff. Then ask what is the total number of volunteers. Then ask whether [NGO] has religious staff. If Yes, how many. Religious staff includes all people having taken religious vows such as nuns, sisters, pastor, minister, priest, etc. They must be counted separately from paid staff and volunteers.]

Once you have the totals, break them down into part-time and full-time. After you obtain totals for the first 5 columns, break down these totals by category. First ask, of the full-time salaried staff, how many people are involved in the management of [NGO]. Examples are directors, country representative, team leader, etc. Then ask whether they are full-time salaried, part-time salaried, etc. Then ask about the total number of other staff and volunteers. Then split the total into what we have decided to call professional, clerical, and other staff. The 'professional' category includes all staff and volunteers directly involved in providing services, advocacy, etc, but are Not involved in the management of [NGO]. Examples are program coordinators, teachers, trainers, nurses, loan officers, grant officers, etc. The 'clerical' category includes all staff and volunteers involved in the administration of [NGO]. Examples include secretaries, accountants, and office assistants. The 'other' category includes all other support staff and volunteers such as guards, gardeners, drivers, and cleaners. Repeat the same questions for part-time salaried staff, etc. Make sure you include staff in all the branches and offices of [NGO], i.e., all the people paid by [NGO]. Do Not include people 'on contract', that is, people hired for less than one month to perform a specific task. Staff on secondment are salaried staff working for [NGO] who are Not paid by [NGO] but by another NGO or organization.]

Post question

[Filling the staff and volunteers table requires asking a variety of questions to obtain the accurate information. A good way to proceed is to begin with the last row, totals. First ask what is the total number of [NGO]'s paid staff. Then ask what is the total number of volunteers. Then ask whether [NGO] has religious staff. If Yes, how many. Religious staff includes all people having taken religious vows such as nuns, sisters, pastor, minister, priest, etc. They must be counted separately from paid staff and volunteers.

Once you have the totals, break them down into part-time and full-time. After you obtain totals for the first 5 columns, break down these totals by category. First ask, of the full-time salaried staff, how many people are involved in the management of [NGO]. Examples are directors, country representative, team leader, etc. Then ask whether they are full-time salaried, part-time salaried, etc. Then ask about the total number of other staff and volunteers. Then split the total into what we have decided to call professional, clerical, and other staff. The 'professional' category includes all staff and volunteers directly involved in providing services, advocacy, etc, but are Not involved in the management of [NGO]. Examples are program coordinators, teachers, trainers, nurses, loan officers, grant officers, etc. The 'clerical' category includes all staff and volunteers involved in the administration of [NGO].
