Sampling

Sampling Procedure

Two surveys, namely the CSS's annual October household survey (OHS) and the IES were run concurrently during October 1995. Information for the IES was obtained, as far as possible, from the same 30 000 households that were visited for the 1995 OHS. Altogether, 3 000 enumerator areas (EAs) were drawn for the sample, and ten households were visited in each EA. The sample was stratified by race, province, urban and non-urban area. The 1991 population census was used as a frame for drawing the sample, including estimates of the size of the population in the formerly independent TBVC (Transkei-Bophuthatswana-Venda-Ciskei) states.

More details on the sampling frame and sampling procedure are given in the report on the 1995 OHS, Living in South Africa (CSS, 1996).

Weighting

Data collected on households were raised to the estimated number of households in the country in the various provinces, according to the proportions found in urban and non-urban areas in the 1991 census.

DATA COLLECTION NOTES

Some sections refers to monthly expenditure (1-31 October 1995) while other refers to
annual expenditure (October 1994-October 1995). In tables where monthly
expenditure per item is reported, the monthly expenditure as supplied by the
households was multiplied by 12 to estimate annual expenditure.
