Description:	
Abstract:	The Department of Education commissioned the Human Sciences Research Council (HSRC) to conduct a national survey on the locality and other information linked to all schools in South Africa. Each school was assigned a co-ordinate by using a GPS survey. The survey also included a comprehensive questionnaire (designed by the Department Education) on the 'condition of buildings', 'number of pupils', 'number of teachers', 'subjects presented', 'type of school' etc.
Purpose:	To compile a comprehensive digital inventory of schools in South Africa to determine the existing facilities with relation to the needs according to population distribution and demography. The database will be used for future planning purposes in the provision of school facilities according to the needs determined. It should also serve to enable more efficient budgeting in the provision of these facilities.
