Sampling

Sampling Procedure

The focus of the survey was businesses who are not registered for Value Added Tax (VAT). These small and micro-businesses are generally excluded from the business frame which is used in surveys of the formal economy conducted by Statistics South Africa. Currently, there is no sampling frame on which to base weights and raising factors for small unregistered businesses in South Africa. As a result, the research design used for SESE was a household based survey, consisting of two stages. The first stage involved using the Quarterly Labour Force Survey (QLFS) enumeration to identify individuals who were running unregistered businesses. The second stage involved follow-up interviews with the owners of these businesses by QLFS enumerators. The QLFS data was collected in the middle two weeks of the month throughout the quarter. The SESE questionnaire was then administered to individuals in relevant households in the last week of the month, also throughout the quarter.

Questionnaires

Overview

The questionnaire covered background data on the small business (from questions 4 to 17 of the questionnaire) and its business operations, including the premises, the establishment of the business and start-up finance (question 18 to 39). Data is also collected on production and the workforce (question 40 to 54), expenditure (question 55 to 56), business capital (question 57 to 61) and transport (question 62 to 63).
