## Sampling Procedure

---

The sampling frame for the LCS was obtained from Statistics South Africa's Master Sample (MS) based on the 2001 Population Census Enumeration Areas. The scope of the Master Sample (MS) is national coverage of all households in South Africa. It was designed to cover all households living in private dwelling units and workers living in workers' quarters in the country. The MS consists of 3080 primary sampling units (PSUs) made up of enumeration areas. The PSU coverage comprises all settlement types, including urban formal, urban informal, rural formal and tribal areas. For the LCS, 3065 PSUs were sampled from the MS and roughly ten dwelling units (DUs) were sampled on average per PSU. In the case of multiple households, all households in the DU were included. The sample was evenly split into four rotations (quarters) with national representativity in each rotation. Each rotation (consisting of a sample for three months) was then evenly split into monthly samples. Ultimately, the sample was evenly spread over the 12 survey periods (one month each).

## Overview

---

The Living Conditions Survey 2008/2009 used a household questionnaire, a weekly diary, and a survey assessment questionnaire. The household questionnaire was a booklet of questions administered to respondents during the course of the survey month. The Weekly diary was a booklet that was left with the responding household to track all acquisitions made by the household during the survey month. The household (after being trained by the Interviewer) was responsible for recording all their daily acquisitions as well as information about where they purchased the item (source) and the purpose of the item. A household completed a different diary for each of the four weeks of the survey month. Interviewers then assigned codes for the classification of individual consumption according to purpose (COICOP) to reported items recorded in the weekly diary, using a code list provided to them. Finally the survey included a survey assessment questionnaire that was administered to households after the survey month was complete by either the district survey coordinator or provincial quality monitor. In addition to serving as a control questionnaire to verify information collected by the interviewers, the instrument was designed to evaluate data collection processes and the respondent's perceptions of Stats SA and the survey.

Content	Descriptions for the different hierarchies of the COICOP codes can be obtained by merging the COICOP file with the expenditure/income file using the COICOP code as the common variable. The COICOP file also indicates the reference period for which expenditure on a particular item was collected (e.g. 1 month, 11 months or 12 months), section number in the main questionnaire in which the question/item was asked as well as the instrument used to obtain the data (diary or main questionnaire)
