Sampling

Sampling Procedure

For the Domestic Tourism Survey 2011 Statistics South Africa used a sample design developed by their Methodology and Evaluation division. This sample frame can be used as a general-purpose household survey frame for all household surveys, irrespective of the sample size requirement of the survey. Stats SA's household-based surveys use a master sample (MS) of 3 080 primary sampling units (PSUs) made up from the 80 787 enumeration areas (EAs) created for the 2001 Population Census.

The master sample used a two-stage, a stratified design with probability-proportional-to-size (PPS) sampling of PSUs from within strata, and systematic sampling of dwelling units (DUs) from the sampled primary sampling units (PSUs). A self-weighting design at provincial level was used and MS stratification was divided into two levels, primary and secondary stratification. Primary stratification was defined by metropolitan and non-metropolitan geographic area type. During secondary stratification, the Census 2001 data were summarised at PSU level. The following variables were used for secondary stratification; household size, education, occupancy status, gender, industry and income.

Weighting

Sampling weights for the data collected from the sampled households are constructed so that responses can be expanded appropriately to represent the entire population of South Africa. The weights are the result of calculations involving several factors, including design weights, adjustment for non-response, and benchmarking to known population estimates from the Demographic Analysis division of Stats SA. The final survey weights are constructed by calibrating the adjusted base weight to the known population counts at national and provincial levels (which are supplied by the Demographic Analysis division of Statistics SA), cross-classified by 5-year age groups (0-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30-34, 35-39, 40-44, 45-49, 50-54, 55-59, 60-64, and 65 and over), gender and race. The provincial population estimates are cross-classified by broad age groups (0-14, 15-34, 35-64, and 65 years and over). The calibrated weights are constructed to ensure that all persons in a household have the same final weight (integrated weighting).

Questionnaires

Overview

Household Questionnaire: This includes sections on:

Household characteristics, household listing, education, tourism employment, trips taken, day trips, overnight trips, barriers to taking trips, business and professional trips, recreation entertainment, sports trips, nature based trips, religious trips, medical trips, type of transport, expenditure on trips, social activities
