Sampling

Sampling Procedure

Se utiliz una submuestra de la Muestra Maestra Nacional (MMN) diseflada por el Departamento Nacional de Estadstica (DANE), la cual tuvo como base el Censo de 1985, actualizada a finales de 19891. Esta muestra fuimplementada para tener representatividad a nivel de 13 subregiones. Cada una de las tres ciudades mayores, Bogot, Medellfn y Cali, es una subregin. La muestra la conforman 174 segmentos, situados en 120 municipios del pals. Cada subregin, excepto Bogot que tiene 140 segmentos y que adems es, per si misma, una regin, est conformada per 56 segmentos; sin embargo, en Antioquia se tienen 87 y en el Valle del Cauca 79, para permitir la representatividad de Medellin y Cali, respectivamente.

El concepto de rural en la MMN del DANE equivale a la peblaci6n dispersa de todos los municipios, ms los centros poblados diferentes a las cabeceras municipales, corregimientos e inspecciones de pelicfa, ms las cabeceras con menos de 10.000 habitantes; adems, las cabeceras mayores de 10.000 habitantes que cumplen los siguientes criterios de ruralidad: que tengan menos del 50 per ciento de la peblaci6n del municipio; que tengan ms del 50 per ciento de su peblacin econ6micamente activa dedicada a la agricultura; que la mayora de las viviendas no cuente con servicios bicos adecuados. Para facilitar la comparacin con trabajos anteriores y para efectos de la presentacin de este informe no se sigue la nueva clasificacin urbano-rural adoptada per el DANE sino la tradicional de cabecera-resto, si bien los trminos se utilizarn intercambiablemente.

UNIVERSO DEL ESTUDIO

Para efectos de la seleccin de la muestra y para la presentacin de los resultados, se considero el criterio tradicional de region geogrfica: de las 5 regiones establecidas, 4 comprenden los 23 departamentos del pas mientras la restante corresponde a Bogot, D.E. Las subregiones estn constituidas por uno o ms departamentos dentro de una misma regin, que obedecen a patrones socio-econ6micos y culturales relativamente semejantes. Para facilitar el anlisis ms detenido de las mayores ciudades del pats se consideraron tambin como subregiones las reas metropolitanas de Medellfn y Cali.

A nivel de pals y de regin la muestra permite con excelente precisin la mayora de las desagregaciones rotinarias de los resultados, y a nivel de subregin tienen precisi6n suficiente las estimaciones globales de las diferentes variables.

MUESTRA BASICA DEL DANE

La Muestra Bsica del DANE (MMN) est~ constituida por 174 municipios pertenecientes a los 23 departamentos del pas. Por su mayor tamao, las 13 cabeceras municipales ms grandes del pas tuvieron probabilidad 1 y fueron inclufdas por definicin en la muestra. Los restantes 161 municipios fueron seleccionados probabilsticamente dentro de cada regi6n. Dentro de estos municipios, la muestra a su vez est constituida por 708 secciones cartogrficas del Censo Nacional de Poblacin y Vivienda de 1985:278 rurales y 430 urbanas, tambin seleccionadas probabillsticamente.

UNIVERSO Y MUESTRA RURAL

El universo rural de la Muestra Bsica del DANE corresponde al 42.3 por ciento de la poblacion del pals; incluye 818 cabeceras municipales y la poblacin dispersa de 968 municipios. El DANE defino como universo rural la poblacidn dispersa, la de caseffos, corregimientos e inspecciones y tambin las cabeceras de municipios de ms de 10.000 habitantes con altos fudices de rttralidad, es decir, municipios con una proporcin de poblacin urbana menor del 50 por ciento, una proporcin econ6micamente activa dedicada a la agricultura mayor del 50 por ciento y una r~roporci6n de viviendas con servicios pblicos inferior al 20 por ciento.

Para la seleccidn, los municipios del universo rural se ordenaron alfabcamente por departamento; dentro de cada regin se asiguaron probabilidades de seleccin proporcionales al tamao de la poblaci6n municipal; se calcul un intervalo de muestreo y se realizo una selecci6n sistemtica. Dentro de cada municipio seleccionado s asignaron a las secciones probabilidades de seleccin proporeionales al tamaflo de su poblacin. Se calculo un intervalo de muestreo y se seleccionaron algunas de ellas sistemticamente. A su vez dentro de cada seccin se llstaron las viviendas existentes, se definieron con limites naturales segmentos con un promedio de 10 viviendas y se seleccionaron aleatoriamente con igual probabilidad los segmentos de la muestra.

UNIVERSO Y MUESTRA URBANA

El universo urbano de la Muestra Bsica del DANE lo constituyo la poblacin concentrada en las cabeceras municipales mayores de 10.000 habitantes con bajo indice de ruralidad de 150 municipios. Este universo corresponde al 57.7 por ciento de la poblacin del pals. Se incluyeron forzosamente los 13 municipios de mayor tamao poblacional. Para cada municipio

seleccionado forzosamente se construyeron 5 estratos socio-econmicos dentro de los cuales se hizo una seleccin sistemtica de secciones con probabilidad proporcional al tamal~o y, dentro de stas, de segmentos de 10 viviendas en promedio, con igual probabilidad.

Para la selecci6n de 19 municipios adicionales se construyeron 2 estratos en cada regin. Dentro de cada estrato se hizo seleccin sistemtica de dos o ms municipios segn tamafio del estrato. En cada municipio se hizo selecci6n sistem~tica de secciones, con probabilidad proporcional al tamafio y, dentro de las secciones seleccionadas, de segmentos con igual probabilidad.

SUBMUESTRA PARA LA ENCUESTA DE PREVALENCIA, DEMOGRAFIA Y SALUD 1990

La muestra de municipios de la EDPS-90 se seleccion probabiltsticamente a partir de la muestra bsica del DANE, previa estratificaci6n por 13 subregiones del pals.

TAMAO DE LA SUBMUESTRA

El primer paso para adecuar la muestra bsica del DANE fui la reduccin del nmero de municipios a 120, Los municipios mayores de 98.000 habitantes se consideraron de forzosa inclusin para la nueva muestra. Tal lmite corresponde al cuociente entre la poblacin total de los 174 municipios y 120. Con los 154 municipios restantes se construyeron 54 estratos, con un tamallo promedio de 65.000 habitantes, combinando 2 o ms municipios de la misma subregin y teniendo en cuenta como variable prioritaria el nivel de urbanizacin. Cuando esta variable no fue suficiente se acudi6 al criterio de vecindad geogrfica. Para llegar a la meta de 120 se descart6 aleatoriamente, con probabilidad proporcional, al tamao un municipio en cada estrato.

De otra parte, a fin de garantizar aproximadamente la misma precisin de la muestra a nivel subregional se fij un tamafio igual de 56 segmentos a cada una de las subregiones. Adicionalmente, para obtener estimaciones separadas para las reas metropolitanas de Medellfn y Cali, segunda y tercera ciudades del pas, se aument el nmero de segmentos para estas ciudades.
Dado que la muestra de segmentos del DANE no fue suficiente en todas las regiones para garantizar la precisi6n mnima esperada, fue necesario incrementar probabilfsticamente los segmentos necesarios. En algunas subregiones, sin embargo, la muestra del DANE exceda los requerimientos de la EPDS-90 siendo necesaria la correspondiente reduccin probabilfsticamente. En el primer caso la seleccin adicional se hizo dentro del conjunto de segmentos existentes, no seleccionados, en las secciones seleccionadas originalmente.

Deviations from Sample Design

Los problemas de orden pblico afectaron principalmente a Saravena y Miraflores. La primera estuvo paralizada durante todo el tiempo de la encuesta debido a un paro cvico; en la segunda no se pudo conclufr el recuento de viviendas ni hacer la encuesta, porque la poblacin fu tomada por un grupo guerrillero, lo cual origin combates con el ejrcito que obligaron a las encuestadoras a abandonar el lugar. Para compensar la prdida de los 11 segmentos de Miraflores fu seleccionado el municipio de Santiago en el Putumayo.

Response Rate

National: En total, se seleccionaron 8.615 hogares, de los cuales 86 per ciento tuvieron entrevista completa. El total de mujeres elegibles fu6 de 9.715 y 89 per ciento, es decir 8.644 mujeres, tuvieron entrevista completa.

Los Territorios Nacionales: El total de 1.300 hogares incluidos en la muestra, se encontraron 1.177 hogares y se entrevistaron 1.111, es decir, el 94.4 por ciento. Del total de 1.300 mujeres elegibles encontradas se realizaron 1.240 entrevistas completas, para una tasa de cobertura del 95.8 por ciento. Las altas tasas de cobertura se debieron en parte a la positiva novedad que desperto la encuesta entre la poblacin.

Questionnaires

Overview

Tanto los cuestionarios bsicos como los manuales de supervisoras y entrevistadoras fueron adaptados por PROFAMILIA, teniendo en cuenta las necesidades del pas, de los dise/lados por el IRD para la segunda ronda de su programa mundial de Encuestas de Salud y Demograffa (Programa DHS-II). Esto permite realizar comparaciones con la informaci6n recolectada en Colombia en 1986 y en otros pa•ses, durante la primera ronda de Encuestas de Salud y Demograffa (Programa DHS-I).

Se utilizaron dos tipos de cuestionarios: uno para (a) hogares y otro (b) individual para las mujeres en edad frtil.

a) En el cuestionario de hogares se obtuvo informacin sobre las caracteffsticas y servicios de la vivienda y sobre cada uno de los miembros del hogar: parentesco con el jefe, residencia habitual, sexo, edad, escolaridad y nivel educativo.

b) El cuestionario individual contiene informacin sobre reproduccin, planificacion familiar, salud infantil y lactancia, nupcialidad, preferencias de fecundidad, antecedentes de la mujer y del marido, e historia laboral y migratoria de la mujer. Adems se incluyeron secciones de especial inter6s sobre conocimientos sobre el SIDA y formas de contagio y prevencin; citologfa vaginal; cesrea; efectos de la esterilizacin sobre las relaciones sexuales y el matrimonio y, por tlltimo, violencia intrafamiliar.

En el cuestionario individual se incluy un Calendario que recoge los eventos ocurridos, mes a mes, desde Enero de 1985: nacimientos, embarazos, terminaciones y uso de anticonceptivos (Columna 1 del calendario); raz6n por la que dej de usar un mtodo (columna 2); los meses de amenorrea (columna 3), abstinencia postparto (columna 4) y lactancia (columna 5); los meses en unin (columna 6); los tipos de localidades en que haba vivido (columna 7); y si ha trabajado o no y el tipo de trabajo desempetlado (columna 8).

DATA COLLECTION NOTES

TRABAJO DE CAMPO - ENCUESTA NACIONAL
El trabajo de campe tuvo un Director y cinco equipos de trabajo, compuesto cada uno per dos supervisoras, seis entrevistadoras y un chofer. Las entrevistas se realizaron durante los tres meses comprendidos entre el 21 de Mayo y el 20 de Agosto de 1990.

TRABAJO DE CAMPO - ENCUESTA DE LOS TERRITORIOS NACIONALES

La Encuesta de Prevalencia, Demograffa y Salud (EPDS-90) de los Territorios Nacionales se llevo a cabo entre el 8 de Septiembre y el 10 de Octubre de 1990. Comparativamente con el resto del pas, represent mayores riesgos para el personal de campo por la situacion de orden pblico que afectaba a casi todos los municipios seleccionados en la muestra y por las dificultades de transporte, propias de estas apartadas regiones.

En principio fu seleccionada una muestra de 112 segmentos pertenecientes a las cabeceras de los siguientes municipios: ARAUCA: Arauca y Saravena; CASANARE: Aguazul y Yopal; PUTUMAYO: Orito y Puerto Asis; GUAVIARE: Miraflores; VAUPES: Mit.

A todos los municipios seleccionados se puede llegar por va area y solo hasta Aguazul y Orito se lleg por va terrestre desde Yopal y Puerto Asis, respectivamente. Para Miraflores se contrat6 un vuelo especial. El uso intensivo del transporte areo constituye un componente importante del costo total de la encuesta.

Los instrumentos de recoleccion (cuestionarios y manuales) son los mismos utilizados en la EPDS- 90 para los departamentos. Dentro de la planeacin de la encuesta se haba previsto que, previamente a la recoleccin, se requerfa implementar un recuento de viviendas de las manzanas seleccionadas, hacer su particion en medidas de tamao de 10 viviendas aproximadamente y seleccionar una de estas partes o segmentos para aplicar all la encuesta. Debido a las deficiencias de la cartograffa y a que esta regin no se haba actualizado para la Muestra Bsica del DANE, hubo necesidad de hacer el recuento de viviendas, especialmente en Saravena y Mit. En algunos casos, la cartografa solo cubra un 30 por ciento, aproximadamente, del tamao real de las poblaciones seleccionadas y presentaba inconsistencias con las respectivas bases geogrficas. Esto llevo a la necesidad de modificar las medidas de tamao seleccionadas previamente.

SUPERVISION

Solamente los procedimientos de seleccion fueron aplicados por las supervisoras, aunque en algunos casos el recuento lo realizaron stas con el apoyo de las encuestadoras. En todos los casos se actualiz la cartograffa y se entreg junto con los formularios de recuento y seleccin de segmentos al muestrista del proyecto. Estos procedimientos fueron revisados y supervigilados por el jefe de trabajo de campo, y verificados en terreno en los casos de Yopal, Arauca y Aguazul.

Data Processing

Data Editing

Se realizo una pre-crflica manual de los cuestionarios y en la grabaelon de la informacin se utilizo el Programa ISSA (Integrated System for Survey Analysis) disefiado per el IRD dentro del Programa DHS. Este paquete verifica los rangos de las variables, detecta inconsistencias y controla el flujo interno de los datos durante la grabacin de cuestionarios. El mismo programa se utiliza para detectar y corregir inconsistencias, primero segmento per segmento y despus para todo el conjunto de datos. ISSA tambin permite hacer imputacin de fechas de eventos cuando la informacin es inconsistente o faltante. Los procesos de crItica y grabacin se iniciaron el 15 de junio y se pmlongaron hasta finales de Septiembre de 1990.

Data Appraisal

Estimates of Sampling Error

En el cuadro B.I del Informe Final se presentan los resultados para las 35 variables consideradas de mayor inters en la encuesta. Para cada variable se incluye, el correspondiente valor de r (sea un promedio o un porcentaje), el error estndar y el nmero de casos en la muestra total. Adems del error estndar, en el cuadro aparecen tambin el DEFT, el error relativo (ES/r) y el intervalo con 95 por ciento de confianza.

En general, los errores estndar son pequefios y que por ello la muestra puede calificarse como bastante precisa; esto es especialmenteclaro en la antepentlltimacolumna donde aparecen los errores relativos. Para ilustrar el uso de las cifras en este cuadro considrese la variable "Promedio Ideal de Hijos", que tiene un valor estimado de 2,579 con un error estndar de 0,027. Si se desea un intervalo de confianza del 95 por ciento, lo que se hace es sumarle y restarle al promedio dos veces al error estndar: 2,579 + (2 x 0,027), lo que produce el intervalo de 2,525 a 2,632. Esto significa que se tiene una confianza de 95 por ciento de que el valor de la poblacin total se encuentra entre esos valores que arroja la muestra.

Los resultados bsicos por zona, regin, subregin y edad de las mujeres se presentan a continuaci6n de los resultados para la poblacin total de mujeres entrevistadas.

Other forms of Data Appraisal

El primer tipo de error incluye la falta de cobertura de todas las mujeres seleccionadas, errores en la formulacin de las preguntas y en el registro de las respuestas, confusi6n o incapacidad de las mujeres para dar la informacin, errores de codificacin o de procesamiento. En el presente estudio se trat6 de reducir a un minimo este tipo de errores a travos de una serie de procedimientos que se emplean en toda encuesta bien diseada y ejecutada, como son: el diseo cuidadoso y numerosas pruebas del cuestionario, buena capacitacin de las entrevistadoras, supervisin intensa y permanente del trabajo de campo, supervisin apropiada en la etapa de codificacin y procesamiento de los datos y limpieza cuidadosa del archivo. Los elementos de juicio disponibles sealan que este tipo de errores se mantuvo dentro de mrgenes razonables en la EPDS-90.
