Sampling

Sampling Procedure

DISENO DE LA MUESTRA

La ENDESA 1991 fue diseada para permitir una diversidad de anlisis a varios niveles de desagregacin geogrfica y/o dominio de estudio. Los mayores dominios a ser distinguidos en las muestra fueron: La Repblica Dominicana como un todo Las reas urbana y rural del pafs Las ocho regiones de salud

El objetivo primordial de la ENDESA-91 es dar estimaciones con un nivel de precisin aceptable para las principales caracteristicas como fecundidad, morbi-mortalidad materna e infantil, prevalencia anticonceptiva, e indicadores de la atencin en salud materno-infantil. La cobertura de la poblacin para la ENDESA-91 fue definida como el universo de todas las mujeres entre 15 y 49 aos residentes en la Repblica Dominicana. La poblacin objeto de estudio fue contactada a travs de entrevistas directas de mujeres elegibles en una muestra de viviendas particulares.

Adems del cuestionario de hogar para la ENDESA-91, se implement6 un cuestionario de hogar ampliado a un nmero igual de viviendas particulares. 1 Por lo tanto, el tamaflo de la muestra de viviendas particulares fue duplicado, es decir, en la mitad de ellas se aplic el cuestionario de la ENDESA-91 y en la otra mitad se implement el cuestionario de hogar ampliado.

En los ltimos aflos anteriores a la ENDESA-91, la Oficina Nacional de Estadstica (ONE) implemento actividades de pre-actualizacin de manzanas para la ciudad de Santo Domingo y de un nmero limitado de otros centros urbanos. Al inicio de la ENDESA-91 no se contaba con este tipo de material pre- actualizado completo para el resto urbano y el rea rural del pas.

Esta situacin llev a una re-evaluacin del uso de este material para la ENDESA-91. Alternativamente, una solucin para el resto urbano era la de usar el material censal de 1981, el cual podria estar disponible pero no en su totalidad. Adems, se contaba con la muestra para la encuesta DHS- 1986 que utiliz una muestra de 609 Unidades Primarias de Muestreo (UPMs), actualizada en d allo de 1986. La decisin final fue la de usar:

- el material pre-actualizado de estructuras para Santo Domingo el cual constituye el marco de muestreo para esa ciudad, y
- el material de la muestra del DHS-I para el marco de muestreo para el resto del pas.

La primera parte de la decision fue influenciada por la necesidad de incorporar el crecimiento y cambio poblacional ocurrido en Santo Domingo desde el censo de 1981. La segunda parte, a su vez, fue influenciada por la disponibilidad de material actualizado al aflo 1986. Fijado el tamaflo de muestra total en un mximo de 8,000 entrevistas completas de mujeres, en la ENDESA, la tarea ms importante en el disefio de la muestra fue la de asegurar un mfnimo de entrevistas en cada dominio para el anlisis de las principales caractersticas con suficiente precisi6n.

Las caractersticas esenciales del disefio de la muestra para la ENDESA-91 son: estratificado, por conglomerados, y selecionada en dos etapas. El error muestral para un diseflo de dos etapas tiene dos componentes: una que corresponde a la variabilidad entre las unidades primadas de muestreo (UPMs) y la otra que considera la variabilidad de las unidades, viviendas, dentro de las UPMs. La primera componente depende del mmero de UPMs en la muestra y es la componente fundamental en el valor del error muestral. De all, que un factor importante en el control del error muestral sea el nt~mero de UPMs en la muestra.

Una recomendacin del programa de encuestas DHS es la de establecer un mnimo de 40 UPMs por dominio para un adecuado anisis de la informacin. An cuando es obvio que el incremento en el nmero de UPMs reduce el error relativo, esta reduccin no es directamente proporcional. En la prctica a un incremento de 100 por ciento en el numero de UPMs, le corresponde una reduccin en el error relativo de so1o 30 por ciento aproximadamente.

Para evitar un innecesario sobremuestreo el cual redundarfa en un alto costo de la encuesta, asf como problemas de logstica y supervisi6n, se consider6 que la recomendaci6n de las 40 UPMs fuese tambi6n un requerimiento para la ENDESA-91.

Debido a que los dominios combinados de la Regin 0 y de la Regin I representan casi un 47 por ciento del total poblacional del pas, una reparticin proporcional de la muestra, de acuerdo al ltimo censo, llevara a una alta concentracin de ella en ambas regiones. Por lo tanto, se hizo necesario una reasignaci6n de la muestra de un dominio mayor a un dominio menor en la forma ms eficiente posible.

Con la estratificacin de 8 regionesde salud, existen dos reparticionesextremas posibles; una que minimiza el error relativo

de las caracteffsticas al nivel nacional, pero no necesariamente a nivel de cada regi6n, conla posibilidad de tener errores bastante apreciables; y la otra que controla el error relativo de cada una de las regiones, pero no necesariamente el error relativo a nivel nacional, que puede llegar a ser mucho mayor de lo esperado en una reparticin proporcional. Entre estos dos tipos de reparticiones extremas existen un sin mirnere de combinaciones posibles. La basqueda de una reparticin que minimice los errores relativos en ambas direcciones, se obtuvo minimizando la funcion de los errores relativos de las regiones, cada uno ponderado por la magnitud de tamao de la region.

La seleccin final de viviendas residenciales particulares dentro de cada UPM fue un nmero fijo, de 20 selecciones por UPM para Santo Domingo y las regiones I, II, y IV; y de 25 selecciones por UPM en el resto del pas. El incremento de 20 a 25 selecciones en algunas regiones se debi al reajuste efectuado al tamafio inicial esperado de muestra, este valor ms reallstico est basado en la informacin actualizada para la ENDESA-91.

Dado que la reparticin de la muestra entre las diferentes regiones de salud no fue proporcional a la distribucin real de ellas, se hace necesario establecer factores de ajuste para el anlisis. Tambin se implement un ajuste por UPM debido al nUmero fijo de selecciones en cada una de ellas. Una tercera componente en los factores de ajuste fue la magnitud de la no respuesta al nivel de hogares y al nivel individual en cada regin.

De las 8,975 viviendas particulares muestreadas se encontr6 un total de 8,032, y de este nmero se obtuvieron 7,144 hogares con entrevista completa. As mismo, de 8,200 mujeres elegibles encontradas en los hogares, se completaron cuestionarios para 7,320 de ellas.

Response Rate

Un total de 8,975 viviendas fueron seleccionadas, de las cuales 8,032 estaban ocupadas. Se complet Cuestionario de Hogar Abreviado en 7,144 viviendas (89 por ciento de las viviendas ocupadas).

Un total de 8,200 mujeres elegibles fueron identificadas a travs del Cuestionario de Hogar, logrndose completar el Cuestionario Individual para 7,320 de ellas (89 por ciento). A nivel de residencia urbano-rural no se observan variaciones importantes en las tasas de respuesta. A nivel de regi6n de salud las tasas de respuesta fueron menores en el Distrito Nacional (regin 0) debido principalmente al frecuente rechazo que se observa en los sectores m favorecidos de la capital. Una descripci6n por zona y regin de residencia segtin resultado de la encuesta se presenta en el Apndice A del Informe Final.

Questionnaires

Overview

Tres cuestionarios en Espafiol fueron usados en la ENDESA-91: el Cuestionario de Hogar Abreviado, el Cuestionario Individual y el Cuestionario de Hogar Ampliado. Los primeros dos cuestionarios, que se aplican en un mismo hogar, son versiones adaptadas a la Repblica Dominicana de los cuestionarios modelo del programa DHS de IRD/Macro Intemational Inc.: DHS Modelo "A", para ser usado en pases con niveles altos en la prevaleneia de anticoncepci6n. El tercer cuestionario fue diseflado completamente en el pas para ser empleado en hogares diferentes a donde se aplicaran los dos primeros. Adicionalmente, en las mismas reas muestrales se aplied un cuestionario de dispohibilidad de servicios a establecimientos • instituciones de salud y planificacin familiar.

c) El Cuestionario de Hogar Abreviado se us6 para listar miembros del hogar con residencia habitual y personas de visita, que pasaron la noche anterior a la entrevista en la vivienda. Para todas aquellas personas listadas, se recolect informacin sobre la relacin con el jefe del hogar, sexo, edad; para personas de 6 o m aros de edad se recolect informacin sobre asistencia escolar, nivel y grado de instruccin; para personas menores de 15 aflos de edad se pregunt6 sobre la convivencia con los padres. El objetivo principal de este cuestionario fue identificar mujeres elegibles para aplicafles el Cuestionario Individual.

b) El Cuestionario Individual se us~ para recolectar informacin de todas las mujeres en edad frtil (MEF), 15-49 afios de edad, que durmieron la noche anterior al da de la entrevista en la vivienda seleccionada (poblacin de facto o de hecho). El Cuestionario Individual recelect6 informacin en los tpicos siguientes:
- Antecedentes de la entrevistada
- Reproduccin e historia de nacimicntos
- Conocimiento, uso y fuente de obtenci6n de mtodos anticonceptivos
- Salud materno-infant'fl y lactancia
- Nupcialidad
- Preferencias de fecundidad
- Antecedentes del marido, residencia y trabajo de la mujer
- Antropometra: talla, peso (madre e hijos) y permetro braquial (madres)

c) Este cuestionario Incluy, adems, un calendario mediante el cual se recoge informacin detallada sobre eventos importantes en la vida de la mujer, registrados mes a mes, desde enero de 1986: nacimientos, embarazos, terminaciones de embarazos y uso de anticonceptivos (Columna 1); raz6n de descontinuacin de mtodos (Columna 2); meses de amenorrea, abstinencia y lactancia (Columnas 3, 4 y 5, respeetivamenle); historia de uniones (Columna 6); tipo de localidad donde ha vivido (Columna 7); y tipo de trabajo desempefiado (Columna 8).

DATA COLLECTION NOTES

El entrenamiento al personal de campo se realiz6 en dos etapas. En la primera se adiestraron 20 candidatas a supervisoras mediante un curso de dos semanas, las cuales realizaron una prueba piloto (del 15 al 18 de mayo) entrevistando en el terreno a 200 mujeres elegibles. Algunos ajustes y modificaciones fueron incluidos en el cuestionario final basadns en la experiencia de la prueha piloto.

En una segunda etapa se adiestraron 40 candidatas a entrcvistadoras en un curso de cuatro semanas de duracin. En este curso se enfatizo la importancia de cada pregunta del cuestionario, los procedimientos de entrevista, se realizaron entrevistas de prueba en oficina y en el terreno. Al final del entrenamiento se seleccionaron 30 entrevistadoras, 5 antropometristas, 10 supervisoras, 3 efftico-codificadoras y 6 digitadoras. Personal de IEPD/PROFAMILIA, ONAPLAN, Development Associates e IRD/IVlacro International Inc. trabaj conjuntamente en la conduccin del entrenamiento. Durante la cuarta semana se capacit6 en antropometrIa (talla, peso y permetro braquial) a aquellas personas seleccionadas para este fin. Esta ltima capacitaci6n estuvo a cargo de personal del Centro Nacional de Investigaciones en Salud Materno-infantil (CNISMD).

El cuestionario de disponibilidad de servicios recogi informaci6n sobre caracteffsticas de la comunidad, disponibilidad de servicios en educacin, salud y planificacidn familiar en la comunidad, caracteffsticas de los establecimientos de salud y planificacin familiar (equipos, disponibilidad de medicamentos, distancia y tiempo a las comunidades en estudio, entre otros).

El trabajo de campo empez el 19 de Julio en Santo Domingo con cinco equipos y se completd el 18 de Noviembre de 1991. Cada equipo estuvo conformado por dos supervisoras, una antropometrista, seis entmvistadoras y un chofer, de los cuales participaron en la aplicacin del Cuestionario de Hogar Ampliado una supervisora y dos entrevistadoras. Para el estudio de disponibilidad de servicios se utilizaron cuatro entrcvistadorcs y una supcrvisora que trabajaron durante tres meses (febrero-abril, 1992).

Data Processing

Data Editing

La primera etapa del procesamiento de la informaci6n se implemento en el terreno, donde las supervisoras verificaban la consistencia de los cuestionarios. Una vez en la ofcina central los cuestionarios pasaron por codificacin y cfftica manual, siendo luego digitados para proceder con la cfftica mediante microcomputadoras. Estas actividades de oficina fueron desempefladas por 3 critieo-codificadoras y o digitadoras.

El ingreso y procesamiento de los datos de la ENDESA-91 se implemento con el programa ISSA (Sistema Integrado para Andisis de Encuestas). Este es un programa avanzado para micro-computadoras disertado por el IRD/Macro International Inc., que permite agilizar el proceso de ingreso de informacin y de elaboracin de tabulaciones, lo que hace posible la presentacin de resultados al poco tiempo del tnnino del trabajo de campo. Debido a la celeridad con que produce resultados, este programa ha permitido hacer evaluaciones de la calidad de la informacion a partir de los primeros das de trabajo de campo.

Data Appraisal

Estimates of Sampling Error

En general, los errores estndar son pequeos y que por ello la muestra puede calificarse como bastante precisa; esto es especialmente claro en la antepenltima columna donde aparecen los errores relativos. Ntese la situacin que se observa para algunas variables con igual nmero de casos pero con error relativo mayor que 10 por ciento para una de las variables. Esta situacin se debe al nmero de casos con la caracterstica del valor estimado.

Para ilustrar el uso de las cifras en este cuadre considrese la variable "Residencia Urbana", que tiene un valor de 0.684 con un error estndar de 0.021. Si se desea un intervalo de confianza del 95 por ciento, lo que se hace es sumarle y restarle al promedio dos veces el error estndar: 0.684 + (2 x 0.021), lo que produce el intervalo de 0.726 a 0.642. Esto significa que se tiene una confianza de 95 por ciento de que el valor de la proporcin de la poblacin con residencia urbana en la poblacin total se encuentra entre esos valores que arroja la muestra.

Los resultados bsicos por zona y regin de residencia, y grandes grupos de edad de las mujeres se presentan a continuacin de los resultados para la poblacin total.

El Cuestionario de hogar

Title	El Cuestionario de hogar
Author(s)	Instituto de Estudios de Población y Desarrollo (IEPD)
Date	1991-06-01
Country	Dominican Rep.
Language	Spanish
Contributor(s)	IRD/Macro Intemational Inc.
Description	El Cuestionario de Hogar Abreviado se us6 para listar miembros del hogar con residencia habitual y personas de visita, que pasaron la noche anterior a la entrevista en la vivienda. Para todas aquellas personas listadas, se recolectó información sobre la relación con el jefe del hogar, sexo, edad; para personas de 6 o mé aros de edad se recolectó información sobre asistencia escolar, nivel y grado de instrucción; para personas menores de 15 aflos de edad se pregunt6 sobre la convivencia con los padres. El objetivo principal de este cuestionario fue identificar mujeres elegibles para aplicafles el Cuestionario Individual.
