Sampling

Sampling Procedure

L'ENPS est basé sur un échantillon stratifié auto-pondéré d'environ 7000 ménages (ou femmes non-clibataires, en âge de reproduction de 15 à 49 ans). D'après le recensement de 1982, on a estimé 1,0 le nombre de femmes possédant ces mêmes caractéristiques par ménage. L'échantillon de l'ENPS est un sous-échantillon de l'Enquête Passages Répétés (EPR). Il a pour base de sondage l'échantillon-matrice élaboré par la Direction de la Statistique du Ministère du Plan, en vue d'effectuer les diverses enquêtes post-censitaires.

En milieu urbain, une unité primaire est constituée de 3 à 4 districts de recensement (DR) de 1982, et ayant une taille de 600 ménages en moyenne. En milieu rural, une unité primaire (UP) est constituée d'une zone ayant une taille de 1000 ménages en moyenne.

Le tirage des UP dans l'échantillon-matrice a été effectué comme suit:

- Au premier degré, on a tiré 536 UP en milieu urbain et 432 UP en milieu rural par tirage systématique avec probabilités proportionnelles à la taille des ménages.
- Au second degré, on a tiré une unité secondaire par UP avec probabilités égales.

Pour les besoins de l'ENPS, on a tiré 138 grappes urbaines et 74 grappes rurales, qui constituent la moitié des grappes tirées dans le cadre de l'EPR, et au niveau de chaque grappe tirée, on a sélectionné la moitié des ménages qui y résident.

Response Rate

Au total, 7472 ménages ont été sélectionnés dont 6985 ont été trouvés. Parmi les ménages trouvés, 6960 ont été enquêtés avec succès, soit un taux de réponse de 99,6 pour cent. Au niveau des entrevues individuelles, 6050 ont été tentées dont 5982 ont été conduites entièrement, ce qui donne un taux de réponse de 98,9 pour cent.

Questionnaires

Overview

Le questionnaire de l'enquête a été préparé à partir du questionnaire de base du programme EDS pour les pays à prévalence contraceptive élevée, en tenant compte des réalités socio-culturelles et démographiques du Maroc. Deux volets principaux composent le questionnaire de cette enquête: la feuille de ménage et le questionnaire individuel.

La feuille de ménage consiste en un groupe de questions relativement simples qui sont posées à chaque membre du ménage et à chaque visiteur(se) ayant passé la nuit précédant le jour de l'interview dans ce ménage: nom et prénoms, lien de parenté avec le chef du ménage, état de résidence, sexe, âge, état matrimonial et niveau d'instruction. La question sur l'état matrimonial est posée aux personnes âgées de 15 ans ou plus et la question sur le niveau d'instruction est adressée aux femmes âgées d'au moins 15 ans. Le but de la feuille de ménage est de fournir les dénominations pour le calcul de certains taux et indices comme les taux de fécondité générale, l'indice synthétique de fécondité et l'âge au premier mariage d'une part et de permettre l'identification des femmes ligibles pour les entrevues individuelles d'autre part.

Le questionnaire individuel comprend neuf sections qui traitent de trois thèmes principaux:

1. Nuptialité, fécondité et mortalité infantile et juvénile, y compris l'historique des naissances de tous les enfants de chacune des femmes enquêtées;
2. Régulation de la fécondité, y compris la connaissance, la pratique, la discontinuation et les raisons de la non utilisation de la planification familiale;
3. Santé de la mère et de l'enfant, y compris les visites prénatales, l'assistance à l'accouchement, l'allaitement au sein, la prévalence et le traitement de la diarrhée, les vaccinations, les causes des décès des enfants, les mesures anthropométriques des enfants âgés de moins de cinq ans et la connaissance et l'utilisation du système de Santé Publique.

Le questionnaire de l'ENPS a d'abord été préparé en français et, par la suite, a été traduit en arabe marocain, langue utilisée sur le terrain par les enquêtrices durant les interviews. Il est à noter que seules les questions adressées aux femmes enquêtées sont en arabe, les codes et les instructions réservés aux enquêtrices sont restés en français.

DATA COLLECTION NOTES

La formation pour la pr-enquête a dur deux semaines (26 janvier-7 février 1987) avec la participation de 16 agents de santé diplômés d'état (ASDE) du Ministère de la Santé Publique. Le travail sur le terrain pour la pr-enquête s'est déroulé du 9 au 14 février dans quatre zones: deux urbaines (Rabat) et deux rurales (Temara). Au total, 202 femmes ont été interviewées et 173 enfants de moins de 5 ans ont été mesurés et pesés. Bien que la majorité des agents aient bien rempli le questionnaire, deux enquêtrices ont, cependant, trouvé beaucoup de difficultés à le maîtriser (non respect des filtres et confusion en remplissant le tableau de régulation de fécondité).

Environ 60 agents ont été recrutés parmi le personnel régional du Ministère de la Santé Publique ayant au moins trois années d'expérience, pour effectuer l'enquête sur le terrain. La formation a duré du 28 mars au 24 avril 1987; les enquêtrices ont reçu une formation de quatre semaines, les aides-contrôleurs et les contrôleurs ont bénéficié de 3 semaines et de 4 semaines de formation respectivement.

Tous les candidats aux différents postes ont participé à un programme de formation consacré aux différents aspects de l'enquête: description détaillée des méthodes contraceptives, étude des sujets liés à la démographie, la santé familiale et la nutrition et techniques d'interview. Des spécialistes ont renforcé la compréhension des candidats sur tous les aspects que recouvre le questionnaire par le biais d'exposés suivis de discussions. Par ailleurs, des interviews simulées et réelles sur le terrain ont fait l'objet du stage de formation.

La formation du personnel chargé des mesures anthropométriques (poids, taille et périmètre crânien) a duré quatre jours et a eu lieu au centre des sages pratiques. Elle a été assurée par quatre médecins dans deux maternités de Rabat. Le test de standardisation a montré que presque le tiers des enquêtrices avait du mal, et, par conséquent, celles-ci ont passé un jour supplémentaire dans les deux maternités pour pratiquer les mesures de taille. Les enquêtrices ont été formées pour être mesureurs et les aides-contrôleuses ont été formées pour être assistantes ou mesureurs de réserve.

À la fin de la formation, huit équipes ont été sélectionnées pour participer à la phase du terrain. Chacune des équipes comprenait un contrôleur (chef d'équipe), une aide-contrôleuse (responsable du contrôle du travail des enquêtrices), quatre enquêtrices et un chauffeur. La collecte des données a commencé le 4 mai 1987 et a duré trois mois.

SUPERVISION

La supervision était assurée, en plus du directeur technique et de son adjoint, par deux cadres statisticiens du SEIS qui ont été désignés comme coordonnateurs sur le terrain.

Data Processing

Data Editing

Cette phase de l'enquête qui a duré trois mois (10 juin-15 septembre) a comporté les trois étapes suivantes:

1. Réception et classement des données: Les questionnaires remplis et contrôlés étaient envoyés au Bureau Central (SELS) de Rabat où, après contrôle d'exhaustivité, ils étaient classés dans l'ordre des ménages par grappe et province.
2. Saisie des données: Elle a été effectuée par une équipe de 8 agents sur trois micro-ordinateurs fournis lors de l'enquête par le programme DHS. Le logiciel ISSA (Integrated Systems for Survey Analysis) développé par IRD/Westinghouse pour les besoins de DHS a été utilisé pour cette tâche. Les agents de saisie ont, en même temps, codifié la seule question sur la profession du mari.
3. Apurement des données: Cette opération, utilisant toujours le logiciel ISSA avait lieu en même temps que la saisie. Les questionnaires de chaque grappe étaient soumis à un programme de vérification batch (ensemble de grappes) plus exhaustif. Dès lors, pendant la saisie, les vérifications des champs de validité des codes et des cohérences des filtres avaient été effectuées.

Après l'apurement des données, les dates des événements ont été imputées, dans le cas où ces informations n'ont pas été enregistrées dans le questionnaire (date de naissance de la femme, date du premier mariage de la femme, date de naissance des enfants et âge au décès des enfants décédés). Les données suivantes donnent les proportions de réponses imputées pour les événements indiqués ci-dessus:

- Date de naissance de la femme (imputée à partir de l'année de naissance et/ou l'âge actuel)
- Mois et année imputés 0,0% Mois imputé 87,1% Date du premier mariage de la femme
- Mois et année imputés 0,2% Mois imputé 76,4%
- Date de naissance des enfants (imputée à partir de l'année de naissance et/ou l'âge actuel)
- Mois et année imputés 0,5% Mois imputé 42,9%
- Âge au décès des enfants décédés 0,3%

Data Appraisal

Estimates of Sampling Error

Les estimations des erreurs de sondage ont été obtenues à partir d'un échantillon national auto-pondéré de 5982 femmes non-clibataires âgées de 15 à 49 ans. Si l'enquête avait été effectuée auprès d'autres répondants, on a tout lieu de penser que les fréquences des réponses auraient été quelque peu différentes de celles qu'on a présentes. C'est l'incertitude de cette hypothèse qui reflète l'erreur de sondage; celle-ci permet donc de mesurer le degré de variation des réponses suivant l'échantillon. L'erreur-type (ET) est un indice particulièrement utile pour mesurer l'erreur de sondage. On l'estime à partir de la variance des réponses dans l'échantillon même. Cet indice a pour propriété que:

- 1) dans 2 échantillons sur 3, la valeur vraie d'un paramètre pour l'ensemble d'une population se trouve à l'intérieur de l'intervalle \pm ET de part et d'autre de la moyenne observée.
- 2) dans 19 échantillons sur 20, la valeur vraie d'un paramètre pour l'ensemble d'une population se trouve à l'intérieur de \pm 2ET.

À titre d'exemple, pour les femmes non-clibataires, l'ENPS a donné un nombre moyen d'enfants vivants de 4,266 auquel correspond une erreur-type de 0,059 enfant. La fourchette dans laquelle se place la moyenne \pm 2ET est donc de 4,149 à 4,383. La probabilité que la vraie valeur ne soit pas à l'intérieur de cet intervalle est de 5 pour cent, si on suppose que les femmes enquêtées ont répondu correctement aux questions dans le tableau des naissances.

Il existe un deuxième indice souvent utile qui s'intitule la racine carrée de l'effet du plan de sondage ou effet de grappe: c'est le rapport de l'erreur-type observée sur l'erreur-type qu'on aurait obtenue si on avait eu recours à un sondage aléatoire simple. Cet indice révèle dans quelle mesure le plan de sondage qui a été choisi (au Maroc, un échantillon à degrés multiples stratifiés) se rapproche d'un échantillon aléatoire simple de la même taille. Autrement dit, la REPS mesure la perte de précision de sondage due au fait qu'on a utilisé un plan de sondage complexe. Les deux principaux facteurs qui déterminent sa valeur sont le nombre moyen de ménages tirés dans chaque grappe et l'hétérogénéité relative des réponses pour une variable donnée, à l'intérieur et entre les grappes. Pour des échantillons tirés à partir de très petites grappes, pour des très petits sous-échantillons dans des grappes de n'importe quelle taille, et pour des variables relativement homogènes, on peut s'attendre à ce que l'effet de grappe ne soit pas très différent de 1. Ceci veut dire qu'on aura perdu très peu en matière de précision d'échantillonnage, du fait du tirage d'un échantillon en grappes par rapport à un sondage aléatoire simple.

Questionnaires

ENPS - Feuille Ménage

Title	ENPS - Feuille Ménage
Author(s)	Ministère de la Santé Publique Service des Etudes et de l'Information Sanitaire
Date	1987-01-01
Country	Morocco
Language	French
Contributor(s)	Institute for Resource Development/Westinghouse
Description	La feuille de ménage consiste en un groupe de questions relativement simples qui sont posées chaque membre du ménage et chaque visiteur(se) ayant passé la nuit précédant le jour de l'interview dans ce ménage: nom et prénoms, lien de parenté avec le chef du ménage, état de résidence, sexe, âge, état matrimonial et niveau d'instruction. La question sur l'état matrimonial est posée aux personnes âgées de 15 ans ou plus et la question sur le niveau d'instruction est adressée aux femmes âgées d'au moins 15 ans. Le but de la feuille de ménage est de fournir les dénominateurs pour le calcul de certains taux et indices comme les taux de fécondité générale, l'indice synthétique de fécondité et l'âge au premier mariage d'une part et de permettre l'identification des femmes éligibles pour les entrevues individuelles d'autre part.

ENPS - Questionnaire Individuel

Title	ENPS - Questionnaire Individuel
Author(s)	Ministère de la Santé Publique Service des Etudes et de l'Information Sanitaire
Date	1987-01-01
Country	Morocco
Language	French
Contributor(s)	Institute for Resource Development/Westinghouse
Description	<p>Le questionnaire individuel comprend neuf sections qui traitent de trois thèmes principaux:</p> <ol style="list-style-type: none"> 1. Nuptialité, fécondité et mortalité infantile et juvénile, y compris l'historique des naissances de tous les enfants de chacune des femmes enquêtées; 2. Régulation de la fécondité, y compris la connaissance, la pratique, la discontinuation et les raisons de la non utilisation de la planification familiale; 3. Santé de la mère et de l'enfant, y compris les visites prénatales, l'assistance à l'accouchement, l'allaitement au sein, la prévalence et le traitement de la diarrhée, les vaccinations, les causes des décès des enfants, les mesures anthropométriques des enfants âgés de moins de cinq ans et la connaissance et l'utilisation du système de Santé Publique.

ENPS - Traduction du Questionnaire

Title	ENPS - Traduction du Questionnaire
Author(s)	Ministère de la Santé Publique Service des Etudes et de l'Information Sanitaire
Date	1987-01-01
Country	Morocco
Language	French
Contributor(s)	Institute for Resource Development/Westinghouse

Description	Le questionnaire de l'ENPS a d'abord été préparé en français et, par la suite, a été traduit en arabe marocain, langue utilisée sur le terrain par les enquêtrices durant les interviews. Il est à noter que seules les questions adressées aux femmes enquêtées sont en arabe, les codes et les instructions réservées aux enquêtrices sont restés en français.
