# Sampling

## Sampling Procedure

L'Enqute Nationale Dmographique et Sanitaire (ENDS) Madagascar a prvu un chantillon national de 6 000 femmes ges de 15 49 ans, destin fournir des rsultats fiables au niveau des milieux urbain et rural sparment. Les travaux cartographiques prpars pour le Recensement Gnral de la Population (RGP), qui devait tre ralis Madagascar en 1991, ont servi de base de sondage. Cette opration cartographique a fourni non seulement des cartes mises jour desfokontany mais aussi des estimations de la population de chaque zone.

L'chantillon de l'ENDS est bas sur un sondage arolaire stratifi et tir~ deux degrs. Au premier degr, 215fokontany ont 6t6 tirs partir de l'ensemble desfokontany avec des probabilits proportionnes leur taille. Un degr de sondage intermdiaire a t introduit dans lesfokontany ruraux, notamment tous les fokontany ruraux qui dpassaient 2 000 habitants ont t diviss en zones plus petites; une seule zone, appele aire d'enqute (AE) a t tire et retenue pour l'enqute. Ce degr de sondage intermdiaire a pour but de limiter le travail de dnombrement des mnages. On appelle donc grappe l'unit~ finale de sondage qui correspond soit unfokontany entier soit une partie dufokontany. Un dnombrement exhaustif des mnages rsidant dans chaque grappe a fourni une liste de mnages partir de laquelle on a tir, au deuxime degr, un chantillon de mnages.

D'aprs les rsultats cartographiques du RGP, la population urbaine tait de 2.121.063 habitants, dont 17 pour cent de la population totale de Madagascar qui tait de 12.289.690 en 1990. Un chantillon de 6000 femmes tir avec une probabilit gale sur l'ensemble du pays n'aurait qu'un peu plus de 1000 femmes rsidant dans le secteur urbain, dont moins de 500 femmes dans la capitale. Ces effectifs assez faibles des sous-chantillons n'auraient pas permis des analyses approfondies au niveau de ces deux domaines. On a donc doubl le taux de sondage du milieu urbain par rapport celui du rural.

D'aprs le recensement de 1975, 25 pour cent de la population urbaine tait constitue de femmes de 15 49 ans; cette proportion tait de 22 pour cent dans la population rurale. En appliquant ces pourcentages aux effectifs de population, on a estim qu'il y a actuellement : 526024 femmes de 15 49 ans en milieu urbain et 2247267 femmes de 15 49 ans en milieu rural.

## Response Rate

Au total, sur les 6500 mnages slectionnes, 6252 ont t identifis, dont 5944 ont t enquts entirement, donnant un taux de rponse de 95 pour cent. L'enqute mnage a permis d'identifier 6520 femmes ligibles dont 6260 ont t interviewes avec succs pendant l'enqute individuelle, soit un taux de rponse de 96 pour cent.

# Questionnaires

## Overview

L'ENDS comporte trois types de questionnaires :
- un questionnaire-mnage
- un questionnaire individuel
- un questionnaire sur la disponibilit des services.

a) Le questionnaire-mnage comporte en page de garde la localisation du mnage, le nombre de visites effectues par l'agent enqutrice, le rsultat de l'interview, et une partie pour le contrle sur le terrain et au bureau. Sur les autres pages, doivent tre ports les renseignements sur les personnes composant le mnage et toute autre personne ayant pass la nuit prcdant l'enqute dans ce mnage ; lien de parent, situation de rsidence, sexe, ge. D'autres questions sont poses sur les personnes de cinq ans et plus telles que la frquentation scolaire, le niveau d'instruction. Et enfin des questions sur la survie des parents pour les personnes de moins de 15 ans. Ce questionnaire permet galement d'identifier les femmes ligibles pour l'enqute individuelle.

b) Le questionnaire individuel doit tre rempli peur toutes les femmes ges de 15-49 ans, recenses dans le mnage, quel que soit leu r statut de rsidence et leur tat matrimonial. Ce questionnaire comporte neuf sections. Il permet de recueillir les informations sur :
- les caractristiques socio-dmographiques de la femme telles que l'fige, la situation matrimoniale, la religion, l'ducation, le lieu de rsidence ;
- la reproduction : plusieurs questions sont poses sur le nombre d'enfants ns-vivants de la femme, les caract6ristiques de chaque naissance vivante (date de naissance, ge de la mre, sexe de l'enfant,...) ;
- la connaissance et l'utilisation de la contraception : les questions relatives cette section permettent de mesurer le degr de connaissance et le taux de prvalence sur les mthodes contraceptives ;
- la grossesse, l'allaitement, la vaccination et la sant. Les diffrentes questions reposent sur les soins prnatals, la vaccination et les maladies rcentes des jeunes enfants (diarrhe, toux,...);
- la nuptialit : en plus des questions sur l'tat matrimonial, d'autres renseignements pourront tre recueillis sur l'activit sexuelle de la femme ;
- la prfrence en matire de fcondit ;
- les caractristiques du conjoint et des femmes enqutes;
- la mortalit maternelle ;
- la taille et le poids des enfants de moins de cinq ans.

c) Le questionnaire sur la disponibilit de services a t rempli pour chaque grappe slectionne dans l'chantillon. Avec ce questionnaire on a recueilli des informations concernant la disponibilit de services scolaires, de sant et de planification familiale dans ces grappes.

# Data Collection

## Data Collection Dates

| Start | End | Cycle |

| 1992-05 | 1992-11 | N/A |

## Data Collection Mode

Face-to-face

**DATA COLLECTION NOTES**

Droulement des activits:

1) Travaux prparatoires -
- Finalisation des questionnaires
- Elaboration du plan de sondage
- Prparation des documents : (les diffrentes fiches)

2) Pr-test
- Recrutement et formation des agents
- Travaux sur terrain
- Mise jour des questionnaires

3) Enqute communautaire et listing
- Formation des agents
- Travaux sur terrain

4) Enqute principale
- Recrutement et formation des agents
- Travaux sur terrain

5) Exploitation et rapports
- Saisie et apurement des donnes
- Prparation du rapport prliminaire
- Tabulation-Analyse et prparation du rapport principal
- Lecture, rvision et impression du rapport principal
- Prparation du rapport rsume
- Organisation du sminaire national

# Data Appraisal

## Estimates of Sampling Error

Les erreurs de sondage peuvent tre values statistiquement. Les estimations qui figurent dans le Rapport Final ont t obtenues partir d'un chantillon de 6260 femmes ges de 15 49 ans. Si l'enqute avait t effectue auprs d'autres enqutes, on a tout lieu de penser que les frquences des rponses auraient t trs peu diffrentes de celles que l'on a prsentes. C'est l'incertitude de cette assomption que reflte l'erreur de sondage; celle-ci permet donc de mesurer le degr6 de variation des rponses suivant l'chantillon.

L'erreur-type (ET) est un indice particulirement utile pour mesurer l'erreur de sondage d'un paramtre (moyenne ou proportion). On l'estime . partir de la variance des rponses dans l'chantillon mme: l'erreur-type est la racine carre de la variance. Cet indice a pour proprit que dans 95 pour cent des chantillons de taille et de caractristique identique, la valeur vraie d'an paramtre pour l'ensemble d'une population se trouve b. l'intrieur de l'intervalle de + 2 ET.

Si l'chantillon des femmes avait t tir d'aprs un plan de sondage alatoire simple, il aurait t possible d'utiliser des formules simples pour calculer les erreurs de sondage. Cependant, l'chantillon de l'ENDS est un chantillon stratifi deux degr6s. Par consquent, on a besoin d'utiliser des formules plus complexes. Le logiciel CLUSTERS, dvelopp par l'International Statistical Institute pour l'Enqute Mondiale de Fcondit, a t utilis pour calculer les erreurs de sondage suivant la mthodologie statistique approprie.

Il existe un deuxime indice trs utile qui est la racine carre de l'effet du plan de sondage (REPS) ou effet de grappe : c'est le rapport de l'erreur-type observe sur l'erreur-type qu'on aurait obtenue si on avait eu recours 1 un sondage alatoire simple. Cet indice rvle dans quelle mesure le plan de sondage qui a t choisi se rapproche d'un chantillon alatoire simple de la mme taille : la valeur 1 de la REPS indique que le plan de sondage est aussi efficace qu'un chantillon alatoire simple, alors qu'une valeur suprieure 1 indique un accroissement de l'erreur de sondage da un plan de sondage plus complexe et moins efficace au point de vue statistique. Le logiciel CLUSTERS calcule aussi l'erreur relative et l'intervalle de confiance pour chaque estimation.

Les erreurs de sondage pour l'ENDS ont t calcules pour certaines variables les plus intrssantes. Les rsultats sont prsentsen annexe du Rapport Final pour le pays en entier, le milieu rural, la capitale Antananarivo, les autres villes et l'ensemble du milieu urbain. En plus, on a les erreurs de sondage des six grandes rgions du pays. En gnral, chaque rgion correspond une province (faritany), sauf Mahajanga et Antsiranana qui doivent tre regroupes pour que les rsultats soient plus fiables statistiquement.

Pour chaque variable, le type de statistique (moyenne ou proportion) et la population de base sont prsents dans le Tableau D.1 du Rapport Final. Les Tableaux D.2 D. 11 prsentent la valeur de la statistique (M), l'erreur- type (ET), le nombre de cas non-pondrs (N) et pondrs (N'), la racine carre de l'effet du plan de sondage (REPS), l'erreur relative (ET/M), et l'intervalle de confiance 95% (M2ET) pour chaque variable.

En gnral, les erreurs relatives de la plupart des estimations pour l'ensemble du pays sont faibles, sauf dans le cas de trs faibles proportions. On remarque certaines diffrences dans les erreurs relatives au niveau des sous-chantillons : par exemple, pour la variable "Enfants ns vivants des femmes ges de 15 49 ans", l'erreur relative en tant qu'un pourcentage de la moyenne estime est, respectivement, de 1,4 %, 2,6% et 5,8% pour l'ensemble des femmes du pays, pour la province d'Antananarivo et pour la capitale Antananarivo.

Pour la mme variable, l'ENDS a donn un nombre moyen d'enfants ns vivants de 3,201 pour l'ensemble des femmes, auquel correspond une erreur-type de 0,044 enfant. La fourchette dans laquelle se place la moyenne + 2 ET est donc 3,113 et 3,288. La probabilit que la vraie valeur du nombre moyen d'enfants ns vivants des femmes ges de 15 49 ans soit l'intrieur de cet intervalle est de 95%.

## Other forms of Data Appraisal

On appelle erreurs de mesure les biais imputables la mise en oeuvre de la collecte et de l'exploitation des donnes tels que l'omission de mnages slectionns, la mauvaise interpr6tation des questions, soit de la part de l'enqutrice, soit de la part de l'enqute, ou encore tels que les erreurs de saisie des donnes. Bien que tout ait t fait pour minimiser ce type d'erreur pendant la mise en oeuvre de l'ENDS, il est difficile d'viter et d'valuer toutes les erreurs de mesure.

## Questionnaires

## ENDS-I Questionnaire Ménage

| | |
|---|---|
| Title | ENDS-I Questionnaire Ménage |
| Author(s) | Centre National de Recherches sur l'Environment |
| Date | 1991-03-01 |
| Country | Madagascar |
| Language | French |
| Contributor(s) | MACRO International Inc. |
| Description | Le questionnaire-ménage comporte en page de garde la localisation du ménage, le nombre de visites effectuées par l'agent enquêtrice, le résultat de l'interview, et une partie pour le contrôle sur le terrain et au bureau. Sur les autres pages, doivent être portés les renseignements sur les personnes composant le ménage et toute autre personne ayant passé la nuit précédant l'enquête dans ce ménage ; lien de parenté, situation de résidence, sexe, âge. D'autres questions sont posées sur les personnes de cinq ans et plus telles que la fréquentation scolaire, le niveau d'instruction. Et enfin des questions sur la survie des parents pour les personnes de moins de 15 ans. Ce questionnaire permet également d'identifier les femmes éligibles pour l'enquête individuelle. |

## ENDS-I Questionnaire Individuel Femme

| | |
|---|---|
| Title | ENDS-I Questionnaire Individuel Femme |
| Author(s) | Centre National de Recherches sur l'Environment |
| Date | 1991-03-01 |
| Country | Madagascar |
| Language | French |
| Contributor(s) | MACRO International Inc. |
| Description | Le questionnaire individuel doit être rempli peur toutes les femmes âgées de 15-49 ans, recensées dans le ménage, quel que soit leu r statut de résidence et leur état matrimonial. Ce questionnaire comporte neuf sections. Il permet de recueillir les informations sur : <br> - les caractéristiques socio-démographiques de la femme telles que l'fige, la situation matrimoniale, la religion, l'éducation, le lieu de résidence ; <br> - la reproduction : plusieurs questions sont posées sur le nombre d'enfants nés-vivants de la femme, les caract6ristiques de chaque naissance vivante (date de naissance, âge de la mère, sexe de l'enfant,...) ; <br> - la connaissance et l'utilisation de la contraception : les questions relatives à cette section permettent de mesurer le degré de connaissance et le taux de prévalence sur les méthodes contraceptives ; <br> - la grossesse, l'allaitement, la vaccination et la santé. Les différentes questions reposent sur les soins prénatals, la vaccination et les maladies récentes des jeunes enfants (diarrhée, toux,...); <br> - la nuptialité : en plus des questions sur l'état matrimonial, d'autres renseignements pourront être recueillis sur l'activité sexuelle de la femme ; <br> - la préférence en matière de fécondité ; <br> - les caractéristiques du conjoint et des femmes enquêtées; <br> - la mortalité maternelle ; <br> - la taille et le poids des enfants de moins de cinq ans. |
