Sampling

Sampling Procedure

La Deuxime Enqute Dmographique et de Sant Madagascar (EDS) a prvu un chantillon de 7000 femmes ges de 15 49 ans, reprsentatif de 99,7 % de la population Malgache. Les deux les Nosy-B et Sainte Marie, exclues de l'chantillon matre qui a servi de base de sondage l'EDS, taient aussi exclues de l'EDS.

Dix principaux domaines d'tude ont t identifis pour l'ENDS-2. Ils correspondaient exactement :
- chacun des six provinces (faritany) (six domaines d'tude),
- la capitale Antananarivo,
- l'ensemble des autres centres urbains,
- l'ensemble des milieux ruraux; et
- l'ensemble du pays.

Une premire allocation proportionnelle de l'chantillon cible (prvu initialement pour 6 000 femmes) aux dix domaines d'tude a montr que les sous-chantillons de la Capitale et des deux faritany de Mahajanga et d'Antsiranana seraient trop faibles pour permettre les analyses approfondies souhaites au niveau de ces trois domaines. On a alors augment l'chantillon cible pour atteindre 7000 femmes et affect un taux de sondage plus lev ces trois domaines d'tude par rapport aux autres. Cependant, un taux de sondage homogne a t appliqu l'intrieur de la Capitale et des strates urbaine et rurale de chaque faritany afin que le sous-chantillon de chaque strate soit auto-pondr.

BASE DE SONDAGE

Madagascar, qui comptait 12.238.914 habitants d'aprs le Recensement Gnral de la Population et de l'Habitation (RGPH) de 1993, est divis en six faritany. l'intrieur de chaque faritany, la hirarchie administrative est la suivante : fivondranana, firaisana, et fokontany. Le milieu urbain est constitu de 103 centres urbains, y compris tous les chefs-lieux de fivondronana. Cette dfinition du milieu urbain est diffrente de celle utilise lors de la premire Enqute Nationale Dmographique et Sanitaire (ENDS) qui comptait seulement 48 communes urbaines d'aprs le recensement de 1975. D'aprs le recensement de 1993, la population urbaine reprsente donc 23 % de la population totale alors que l'ENDS tait base sur une population urbaine d'environ 20 %.

Suite au RGPH et avec l'assistance technique du Bureau de Recensement des Etats-Unis, la Direction de la Dmographie et des Statistiques Sociales (DDSS) de l'Institut National de la Statistique a construit un chantillon matre qui devait servir de base de sondage au programme national d'enqutes auprs des mnages.

L'chantillon matre n'est pas tout fait un chantillon national, mais ne reprsente que 99,7 % de la population malgache. Lesdeux les Nosy-B (Antsiranana) et Sainte-Marie (Toamasina), qui reprsentent 0,03 % de la population, ont t exclues pour des raisons cartographiques: ou les cartes de base du RGPH n'existaient pas, ou elles taient de mauvaise qualit et donc inutilisables.

L'chantillon matre a t stratifi et tir en deux degrs arolaires. La stratification a t mene en plusieurs tapes.

CARACTERISTIQUES DE L'ECHANTILLON DE L'EDS

L'chantillon de l'EDS est bas sur un sondage arolaire stratifi et tir deux degrs. Chacun des six faritany a t stratifi en urbain et rural. La Capitale a constitu une strate part. Ce qui a donn, au total, 13 strates. l'intrieur de chaque strate de l'EDS, les caractristiques de stratification plus fine taient exactement les mmes que celles de l'chantillon matre.

Dans chaque strate, on a tir au premier degr, un certain nombre d'units de sondage partir de trois sous-chantillons de l'chantillon matre. Une unit de sondage correspondait exactement l'UPS ainsi dfinie par l'chantillon matre. Comme l'chantillon matre avait dj t tir avec des probabilits proportionnelles la taille des UPS, on a effectu un tirage systmatique d'UPS l'intrieur de chaque strate avec des probabilits gales. Une fois l'UPS tire, on a adopt la mme unit secondaire de sondage (USS) et la mme aire d'enqute (AE) dfinies par l'chantillon matre. La grappe finale de l'EDS tait donc une ZD en entier ou une AE qui est une partie de ZD.

Un dnombrement des mnages dans chacune de ces grappes a fourni une liste de mnages partir de laquelle on a tir, au deuxime degr, un chantillon de mnages. Tous les membres de ces mnages taient dnombrs l'aide d'un questionnaire mnage et chaque femme ge de 15 49 ans identifie tait enqute avec un questionnaire femme plus dtaill.

REPARTITION DE L'ECHANTILLON

Les tableaux A.2 et A.3 dans le Rapport Final donnent la rpartition de la population estime en 1997 selon les six faritany, mais sans les les Nosy-B et Sainte Marie puisque celles-ci n'taient pas couvertes par l'enqute. Une allocation proportionnelle des 6000 femmes initialement prvues aux 13 strates a donn la rpartition de l'chantillon du tableau A.4.

Alors que les chantillons des quatre plus grands faritany seraient suffisamment grands pour permettre des estimations fiables, tel n'tait pas lecas pour la Capitale, Mahajanga et Antsiranana. On a donc ajout 1 000 femmes l'chantillon initial et sur-chantillonn la Capitale, Mahajanga et Antsiranana par rapport aux autres faritany. l'intrieur de chaque faritany, l'chantillon a t rparti proportionnellement entre les milieux urbain et rural. Les tableaux suivants donnent la rpartition de l'chantillon final ainsi que le nombre d'units arolaires que l'on devait tirer.

Le nombre de grappes tirer dpend du nombre de femmes enquter dans chaque grappe, la grappe tant l'unit de sondage arolaire finale retenue pour l'enqute. Ainsi, dans le cadre de l'EDS, la grappe correspond gnralement une ZD entire ou une partie de ZD(aire d'enqute) ainsi dfinie par l'chantillon matre. Les analyses menes aprs d'autres enqutes analogues ont indiqu que le nombre optimal de femmes enquter par grappe est de l'ordre de 30-35 dans le milieu rural et de 20-25 dans le milieu urbain. En prvoyant d'enquter une moyenne de 30 femmes dans chaque grappe rurale et de 20 femmes dans chaque grappe urbaine, on aboutit un nombre total de 269 grappes, comme le prsente le tableau A.6.

Aprs avoir examin les chiffres du tableau A.6, on a rarrang le nombre de grappes dans chaque strate de telle sorte que : (1) le nombre de grappes soit pair dans chaque strate et (2) le nombre de femmes par strate ne soit pas trop diffrent du nombre optimal du tableau A.5. Le nombre pair de grappes est recommand pour les calculs ultrieurs des erreurs de sondage dans lesquels la premire tape est de former des paires de grappes de telle sorte que chaque paire soit aussi homogne que possible. Le tableau A.7 prsente le nombre final de grappes tires.

Le nombre de mnages tirer pour arriver l'chantillon de femmes propos a t calcul de la manire suivante: d'aprs l'ENDS 92, il y avait 1,3 femmes ges de 15 49 ans par mnage urbain et 1,0 femme 1549 par mnage rural. Dans la mme enqute on a trouv un taux de rponse global de 85 %; ceci en supposant que, parmi l'ensemble des mnages tirs pour l'enqute, on en trouverait seulement 90 % sur le terrain pour des raisons diverses (logement non trouv, refus de rpondre, mnage absent, etc...), et parmi l'ensemble des femmes identifies, on en trouverait seulement 90 % sur le terrain. Ceci conduit tirer, en moyenne, 18 mnages par grappe urbaine et 35 mnages par grappe rurale.

Response Rate

Au total, sur les 7915 mnages qui ont t slectionns, 7349 ont pu tre identifies et 7171 ont t enquts entirement donnant un taux de rponse des mnages de 97,6 %. Par ailleurs, l'enqute mnage a permis d'identifier 7424 femmes ligibles parmi lesquelles 7060 ont t interviewes avec succs pendant l'enqute individuelle, soit un taux de rponse de 95,1 %. Le taux de rponse global des femmes, produit du taux de rponse des enqutes mnages et de celui des femmes est valu 92,8 %.

Questionnaires

Overview

L'EDS comporte deux types de questionnaires: un questionnaire-mnage, et un questionnaire individuel. La version dfinitive des questionnaires a t rdige en malgache, langue nationale du pays.

a) Questionnaire-mnage

Il permet d'tablir la liste de tous les membres du mnages et de toutes les autres personnes ayant pass la nuit prcdant l'enqute dans ce mnage, de collecter leur sujet un certain nombre d'informations telles que le nom, le lien de parent avec le chef de mnage, la situation de rsidence, le sexe, l'ge et le niveau d'instruction. Quelques caractristiques de l'habitat comme le sol, le type de toilettes utilises, l'approvisionnement en eau, ont galement t insres dans ce questionnaire dans le but de fournir des indicateurs socio-conomiques et environnementaux du mnage. Le questionnaire mnage comporte galement en page de garde la localisation du mnage, le nombre de visites effectues par l'agent enquteur, le rsultat de l'interview, ainsi qu'une partie pour le contrle sur le terrain et au bureau. Mais l'objectif principal de ce questionnaire est de permettre l'identification des femmes ligibles (ges de 15-49 ans) et de fournir les informations permettant d'tablir le dnominateur pour le calcul des taux dmographiques (natalit, mortalit, fcondit).

b) Questionnaire individuel

Le questionnaire individuel femme constitue le coeur de l'EDS. Il doit tre rempli pour toutes les femmes ligibles recenses dans le mnage, c'est--dire les femmes ges de 15 49 ans, ayant pass la nuit prcdant l'enqute dans le mnage, quel que soit leur statut de rsidence. Ce questionnaire comporte dix sections. Il permet de recueillir des informations concernant les diffrents domaines suivants :
- Caractristiques socio-dmographiques de l'enqute : le lieu de rsidence, l'ge, la situation matrimoniale, la religion, la scolarisation, l'alphabtisation, l'accs aux mdia et les conditions d'habitat pour les femmes qui sont en visite dans le mnage enqut;
- Reproduction : les naissances vivantes que la femme a eues durant sa vie, ainsi que leur tat de survie au moment de l'enqute; sur l'tat de grossesse, la connaissance de la priode fconde dans le cycle menstruel etc...
- Connaissance et utilisation de la contraception : le niveau de connaissance et la prvalence des mthodes contraceptives, ainsi que les sources d'approvisionnement;
- Grossesse, allaitement, vaccination et sant : les diffrentes questions portent sur la grossesse, l'allaitement, la vaccination, la prvalence et le traitement des maladies rcentes chez les moins de 3 ans (diarrhe, toux, etc ...);
- Nuptialit : en plus des questions sur l'tat matrimonial, d'autres renseignements sont recueillis sur l'activit sexuelle de la femme;
- Prfrence en matire de fcondit : le dsir d'enfants supplmentaires, l'intervalle idal entre les naissances et l'opinion sur la taille de la famille;
- Caractristiques du conjoint et activit conomique des femmes enqutes : Ces questions ont t poses afin de connatre les caractristiques socio-professionnelles du conjoint des femmes en union et l'activit professionnelle de ces femmes;
- Mortalit maternelle : Ces questions permettent d'obtenir des informations sur l'tat de survie des frres et soeurs de l'enqute. En cas de dcs d'une soeur de 12 ans ou plus, des questions permettent de dterminer si le dcs est li une cause maternelle;
- MST et sida : informations sur la connaissance et la prvalence des Maladies Sexuellement Transmissibles et sur les modes de transmission et de prvention du sida;
- Taille et poids des mres et des enfants : mesures anthropomtriques des femmes enqutes et de leurs enfants de moins de 3 ans.

DATA COLLECTION NOTES

Neuf quipes comportant chacune un chef d'quipe, un contrleur, et un nombre variable d'enqutrices ont t constitues pour couvrir l'ensemble des grappes lors de l'enqute principale.

Par rapport 1992, il faut remarquer que l'EDS 1997 comporte 4 nouveauts. En premier lieu, une localisation prcise des grappes a t donne travers le Global Positionning System (GPS). Deuximement, un test sur le sel couramment utilis par les mnages a t fait pour dterminer le niveau d'utilisation du sel iod par les mnages. Par ailleurs, l'EDS 1997 a comport un test sur l'anmie, ralis auprs des enfants de moins de 3 ans et de leur mre. Le niveau d'hmoglobine sanguine a t mesur l'aide d'une hmocue et des niveaux d'anmie (lgre, moyenne et svre) ont pu tre dtermins. Ces tests sanguins ont t effectus par des mdecins. Enfin, le questionnaire a comport un module MST/SIDA permettant d'apprhender la connaissance et la prvalence des MST/SIDA chez les femmes malgaches.

Les travaux de terrain de l'enqute principale se sont drouls du mois de septembre au mois de dcembre.

Data Processing

Data Editing

L'exploitation des donnes englobe plusieurs activits : la rception des donnes et le contrle de bureau (contrle des fiches), la saisie, la comparaison de chaque fichier, l'dition des donnes, l'apurement et la tabulation.

La vrification des donnes a dmarr ds la rception des premiers questionnaires de l'enqute. Elle a consist en des contrles d'exhaustivit de l'chantillon par rapport aux fiches de terrain et en un contrle sommaire de la cohrence des donnes.

Afin de rduire les taux d'erreurs et d'amliorer la qualit des donnes, tous les questionnaires ont fait l'objet d'une double saisie. En outre, des tableaux fournissant des rsultats bruts sur certaines variables de base et permettant de rectifier les erreurs de collecte taient produits rgulirement de faon contrler la qualit des donnes collectes. Ces tableaux taient analyss et les problmes dtects taient signals aux enqutrices de faon amliorer la qualit de remplissage des questionnaires.

L'dition des donnes a t ralise par les informaticiens de l'quipe technique en vue de vrifier la cohrence interne des rponses enregistres dans le questionnaire et de corriger les ventuelles erreurs. Pour l'apurement, on a utilis un programme de contrle pour vrifier, grappe par grappe, aprs saisie et dition, la cohrence interne des rponses. Quant la tabulation, elle a consist dvelopper et exploiter les programmes de sortie des tableaux de base destins l'laboration du rapport final. La tabulation a t entirement ralise au sige de Macro International Inc. Calverton, Maryland.

Notons enfin que les oprations de saisie, d'dition, d'apurement et de tabulation ont t ralises avec le logiciel (Integrated System for Survey Analysis) dvelopp par Macro International Inc.

Data Appraisal

Estimates of Sampling Error

Les erreurs de sondage peuvent tre values statistiquement. Les estimations qui figurent dans le Rapport Final ont t obtenues partir d'un chantillon de 7060 femmes ges de 15 49 ans. Si l'enqute avait t effectue auprs d'un autre chantillon de femmes, il y a tout lieu de penser que les frquences des rponses auraient t trs peu diffrentes de celles prsentes ici. C'est l'incertitude de cette assomption que reflte l'erreur de sondage; celle-ci permet donc de mesurer le degr de variation des rponses d'un chantillon un autre.

L'erreur-type (ET) est un indice particulirement utile pour mesurer l'erreur de sondage d'un paramtre (moyenne ou proportion). Elle est estime partir de la variance des rponses dans l'chantillon mme : l'erreur-type est la racine carre de la variance.

Si l'chantillon de femmes avait t tir d'aprs un plan de sondage alatoire simple, il aurait t possible d'utiliser des formules simples pour calculer les erreurs de sondage. Cependant, l'chantillon de l'EDS tant un chantillon stratifi deux degrs, des formules plus complexes ont t utilises. Le module erreurs de sondage du logiciel ISSA a t utilis pour calculer les erreurs de sondage suivant la mthodologie statistique approprie. Ce module utilise la mthode de linarisation (Taylor) pour des estimations telles que les moyennes ou proportions, et la mthode de Jackknife pour des estimations plus complexes tels que l'indice synthtique de fcondit et les quotients de mortalit.

La mthode de Jackknife drive les estimations des taux complexes partir de chacun des souschantillons de l'chantillon principal, et calcule les variances de ces estimations avec des formules simples. Chaque sous-chantillon exclut une grappe dans les calculs des estimations. Ainsi, des sous-chantillons pseudo-indpendants ont t crs. Dans l'EDS, il y a 269 grappes non-vides. Par consquent, 269 souschantillons ont t crs.

Il existe un deuxime indice trs utile qui est la racine carre de l'effet du plan de sondage (REPS) ou effet de grappe : c'est le rapport de l'erreur-type observe sur l'erreur-type qu'on aurait obtenue si un sondage alatoire simple avait t utilis. Cet indice rvle dans quelle mesure le plan de sondage qui a t choisi se rapproche d'un chantillon alatoire simple de mme taille : la valeur 1 de la REPS indique que le plan de sondage est aussi efficace qu'un chantillon alatoire simple, alors qu'une valeur suprieure 1 indique un accroissement de l'erreur de sondage d un plan de sondage plus complexe et moins efficace au point de vue statistique. Le logiciel calcule aussi l'erreur relative et l'intervalle de confiance pour chaque estimation.

Les erreurs de sondage pour l'EDS ont t calcules pour certaines des variables les plus intressantes. Les rsultats sont prsents en annexe du Rapport Final pour l'ensemble du pays, le milieu urbain, le milieu rural, et pour chacune des six provinces (Faritany). Pour chaque variable, le type de statistique (moyenne, proportion ou taux) et la population de base sont prsents dans le tableau B.1 du Rapport Final. Les tableaux B.2 B.10 prsentent la valeur de la statistique (M), l'erreur-type (ET), le nombre de cas non-pondrs (N) et pondrs (N'), la racine carre de l'effet du plan de sondage (REPS), l'erreur relative (ET/M), et l'intervalle de confiance 95 % (M2ET) pour chaque variable. L'effet du plan de sondage (REPS) est non-dfini quand l'cart-type sous l'chantillon alatoire simple est zro (quand l'estimation est proche de 0 ou 1). Dans le cas de l'indice synthtique de fcondit, le nombre de cas non-pondrs n'est pas pertinent, car la valeur nonpondre de femmes-annes d'exposition au risque de grossesse n'est pas connue.

L'intervalle de confiance est interprt de la manire suivante : pour la variable Enfants ns vivants des femmes 15-49 ans, l'EDS a donn un nombre moyen d'enfants ns vivants de 3,215 pour l'ensemble des femmes, auquel correspond une erreur-type de 0,05 enfant. Dans 95 % des chantillons de taille et caractristique identiques, la valeur relle du nombre moyen d'enfants ns vivants des femmes ges de 15 49 ans se trouve entre 3,215 - 2x0,05 et 3,215 + 2x0,05, soit 3,115 et 3,315.

Les erreurs de sondage ont t analyses pour l'chantillon national de femmes et pour deuxgroupes d'estimations : (1) moyennes et proportions, et (2) taux dmographiques. Les erreurs relatives (ET/M) des moyennes et proportions se situent entre 1,2 % et 27,4 % avec une moyenne de 5,9 %. Les erreurs relatives les plus leves sont gnralement celles des trs faibles estimations (par exemple, parmi les femmes actuellement en union qui utilisent le condom). Si on enlve les estimations de trs faible valeur (moins de 10 %), la moyenne tombe 3,6 %. Ainsi, en gnral, les erreurs relatives de la plupart des estimations pour l'ensemble du pays sont faibles, sauf dans le cas de trs faibles proportions. L'erreur relative de l'indice de fcondit est assez faible (2,4 %). Cependant, pour les taux de mortalit, l'erreur relative moyenne est un peu plus lev (6,7 %).

Il existe des diffrences entre les erreurs relatives au niveau des sous-chantillons. Par exemple, pour la variable Enfants ns vivants des femmes ges de 40 49 ans, l'erreur relative pour l'chantillon de femmes est respectivement de 2 %, 3,4 % et 6 % pour l'ensemble du pays, l'ensemble du milieu urbain et le faritany de Mahajanga.

Pour l'chantillon national de femmes, la moyenne de l'effet du plan de sondage (REPS) calcule pour l'ensemble des estimations est de 1,6 ce qui veut dire que, par rapport un chantillon alatoire simple, la variance est multiplie par un facteur de 1,62 = 2,56 parce qu'on utilise un plan de sondage complexe (par grappes et plusieurs degrs).

Other forms of Data Appraisal

Les erreurs de mesure et les erreurs de sondage. Les erreurs de mesure sont celles associes la mise en oeuvre de la collecte et de l'exploitation des donnes telles que l'omission de mnages slectionns, la mauvaise interprtation des questions de la part de l'enqutrice ou de l'enqute, ou les erreurs de saisie des donnes. Bien que tout le possible ait t fait pour minimiser ce type d'erreur pendant la mise en oeuvre de l'EDS, il est difficile d'viter et d'valuer toutes les erreurs de mesure.

Questionnaires

ENDS-II Questionnaire Ménage

Title	ENDS-II Questionnaire Ménage
Author(s)	Centre National de Recherches sur l’Environment
Date	1997-01-01
Country	Madagascar
Language	French
Contributor(s)	MACRO International Inc.
Description	Questionnaire-ménage Il permet d'établir la liste de tous les membres du ménages et de toutes les autres personnes ayant passé la nuit précédant l'enquête dans ce ménage, de collecter à leur sujet un certain nombre d'informations telles que le nom, le lien de parenté avec le chef de ménage, la situation de résidence, le sexe, l'âge et le niveau d'instruction. Quelques caractéristiques de l'habitat comme le sol, le type de toilettes utilisées, l'approvisionnement en eau, ont également été insérées dans ce questionnaire dans le but de fournir des indicateurs socio-économiques et environnementaux du ménage. Le questionnaire ménage comporte également en page de garde la localisation du ménage, le nombre de visites effectuées par l'agent enquêteur, le résultat de l'interview, ainsi qu'une partie pour le contrôle sur le terrain et au bureau. Mais l'objectif principal de ce questionnaire est de permettre l'identification des femmes éligibles (âgées de 15-49 ans) et de fournir les informations permettant d'établir le dénominateur pour le calcul des taux démographiques (natalité, mortalité, fécondité).

ENDS-II Questionnaire Individuel Femme

Title	ENDS-II Questionnaire Individuel Femme
Author(s)	Centre National de Recherches sur l’Environment
Date	1997-01-01
Country	Madagascar
Language	French
Contributor(s)	MACRO International Inc.

Description	Questionnaire individuel Le questionnaire individuel femme constitue le coeur de l'EDS. Il doit être rempli pour toutes les femmes éligibles recensées dans le ménage, c'est-à-dire les femmes âgées de 15 à 49 ans, ayant passé la nuit précédant l'enquête dans le ménage, quel que soit leur statut de résidence. Ce questionnaire comporte dix sections. Il permet de recueillir des informations concernant les différents domaines suivants : - Caractéristiques socio-démographiques de l'enquêtée : le lieu de résidence, l'âge, la situation matrimoniale, la religion, la scolarisation, l'alphabétisation, l'accès aux média et les conditions d'habitat pour les femmes qui sont en visite dans le ménage enquêté; - Reproduction : les naissances vivantes que la femme a eues durant sa vie, ainsi que leur état de survie au moment de l'enquête; sur l'état de grossesse, la connaissance de la période féconde dans le cycle menstruel etc... - Connaissance et utilisation de la contraception : le niveau de connaissance et la prévalence des méthodes contraceptives, ainsi que les sources d'approvisionnement; - Grossesse, allaitement, vaccination et santé : les différentes questions portent sur la grossesse, l'allaitement, la vaccination, la prévalence et le traitement des maladies récentes chez les moins de 3 ans (diarrhée, toux, etc ...); - Nuptialité : en plus des questions sur l'état matrimonial, d'autres renseignements sont recueillis sur l'activité sexuelle de la femme; - Préférence en matière de fécondité : le désir d'enfants supplémentaires, l'intervalle idéal entre les naissances et l'opinion sur la taille de la famille; - Caractéristiques du conjoint et activité économique des femmes enquêtées : Ces questions ont été posées afin de connaître les caractéristiques socio-professionnelles du conjoint des femmes en union et l'activité professionnelle de ces femmes; - Mortalité maternelle : Ces questions permettent d'obtenir des informations sur l'état de survie des frères et soeurs de l'enquêtée. En cas de décès d'une soeur de 12 ans ou plus, des questions permettent de déterminer si le décès est lié à une cause maternelle; - MST et sida : informations sur la connaissance et la prévalence des Maladies Sexuellement Transmissibles et sur les modes de transmission et de prévention du sida; - Taille et poids des mères et des enfants : mesures anthropométriques des femmes enquêtées et de leurs enfants de moins de 3 ans.

Enquête Nationale Démographique et Sanitaire 1997 - Rapport Final

Title	Enquête Nationale Démographique et Sanitaire 1997 - Rapport Final
Author(s)	Centre National de Recherches sur l’Environment
Date	1998-11-01
Country	Madagascar
Language	French
Contributor(s)	MACRO International Inc.
Description	Ce rapport présente les résultats de l'Enquête Démographique et de Santé (EDS), réalisée à Madagascar en 1997 par la Direction de la Démographie et des Statistiques Sociales (DDSS) de l'Institut National de la Statistique (INSTAT), avec l'assistance technique de Macro International Inc. Le Fonds des Nations Unies pour la Population a financé la totalité des coûts locaux de l'enquête et l'UNICEF a contribué au projet en fournissant des véhicules et d'autres matériels pour les activités de terrain. L'assistance technique et l'équipement médical et informatique ont été financés par l'Agence des États-Unis pour le Développement International (USAID). L'EDS fait partie du programmemondial des Enquêtes Démographiques et de Santé (Demographic and Health Surveys - DHS), dont l'objectif est de collecter, d'analyser et diffuser des données démographiques portant en particulier sur la fécondité, la planification familiale et la santé de la mère et de l'enfant.
