Sampling

Sampling Procedure

L'chantillon de l'EDS-Mali est national et pondr couvrant les strates urbaines et rurales. La strate urbaine est reprsentative 100 pour cent, et la strate rurale de 90 95 pour cent cause de la population nomade et des populations rurales des rgions de Tombouctou et Gao qui ont t cartes.

La section d'numration (SE) du recensement est l'unit primaire d'chantillonnage de la strate urbaine. Elle comprend environ 1000 habitants.

L'arrondissement est l'unit primaire de la strate rurale.

A. STRATE URBAINE

Dans la strate urbaine, 60 SE ont t tires et enqutes. La strate urbaine est compose de toutes les communes, des villes qui avaient une population d'environ 5000 habitants ou plus au recensement de 1976 et des chefs-lieux de cercle, mme si ceux-ci n'avaient pas 5000 habitants. La strate urbaine se subdivise en sous-strate "communes" et sous-strate "villes". Aprs la mise jour de la base de sondage (c'est--dire de la liste des SE) et son dcoupage en segments 500 habitants, le tirage de l'chantillon urbain a t effectu comme suit:

1, Sous-Strate "Villes"
- Au premier degr, sept villes ont t slectionnes avec une probabilit proportionnelle la taille de leur population.
- Au second degr, deux SE ont t6 tires avec probabilits gaies dans chacune des villes tires.
- Au troisime degr, un segment d'environ 500 habitants a t tir avec probabilits gales.
- Au quatrime degr, les mnages ont t tirs de faon systmatique afin d'avoir une fraction de sondage constante gale 1/340.

2. Sous-Strate "Communes"
- Au premier degr, 46 SE ont t rparties de faon proportionnelle entre les communes, suivant leur population. Ensuite dans chaque commune, le nombre de SE ainsi attribu a ~t tir6 avec probabilits gaies.
- Au second degr, un segment a t6 tir~ avec probabilits gaies dans chaque SE tire.
- Au troisime degr, les mnages ont t slectionns de faon systmatique comme dans la sous-strate "villes".

B. STRATE RURALE

Le tirage de l'chantillon rural, aprs la mise jour de la base de sondage, s'est effectu comme suit:
- Au premier degr, 34 arrondissements ont ~t rpartis de faon proportionnelle entre les rgions suivant leur population. Ensuite, dans chaque rgion, le nombre d'arrondissements attribus a t tir avec probabilits proportiormelles la population des arrondissements de la rgion au recensement de 1976.
- Au second degr, deux villages ou groupes de villages ont t tirs dans chaque arrondissement slectionn, de faon proportionnelle au nombre de segments (de 500 habitants) des villages de l'arrondissement.
- Au troisime degr, un segment a t tir avec probabilits gaies dans chacun des deux villages ou groupes de villages slectionns.
- Au quatrime degr, les mnages ont t tires de faon systmatique, telle que la fraction de sondage soit une constante gale 1/490.
Au total, 91 villages ont compos l'chantillon de la strate rurale de l'EDS-Mali.

Lors de l'valuation qui a eu lieu pendant le Ramadan, on a constat un dficit de la taille de l'chantillon et par consquent on a du procder un redressement. Ce dficit provenait de l'estimation incorrecte du nombre de femmes par mnage, rgion et milieu, partir des donnes du recensement de 1976, ainsi que d'une apprciation approximative des flux et reflux saisonniers des populations en milieu rural. Pour remdier ce dficit, un surchantillonnage s'est avr ncessaire. Il visait obtenir les 3600 femmes constituant la taille de l'chantillon fixe au pralable. Il a fallu procder un second tirage des mnages des SE urbaines et des villages qui n'avaient pas encore t enquts.

Deviations from Sample Design

Trois villages n'ont pu tre enquts dans la rgion de Kayes, deux d'entre eux pour cause d'inaccessibilit, et le troisime parce qu'aucun mnage n'y a t tir, ce qui ramne le nombre total de SE urbaines et villages visits 148 units.

Response Rate

Les femmes ges de 15 49 ans rsidentes, prsentes au moment de l'interview ou en visite, constituent l'chantillon femme de l'EDS-Mali. Cet chantillon a t valu au dpart 3600 femmes dont environ 2652 (c'est--dire les deux tiers) devaient tre choisies en milieu rural. En tenant compte de 10 pour cent de non rponse, on esprait interviewer une population de 3240 femmes.

A la fin de l'enqute, 3200 femmes avaient t interroges dans l'ensemble du Mali, sur un total de 3246 femmes ligibles. Parmi les femmes interroges, il y en a 838 en milieu urbain et 2362 en milieu rural. Dans l'ensemble, on estime le taux de rponse de l'EDS-Mali 97,9 pour cent.

Un chantillon des hommes gs de 20 55 ans a t enqut dans deux tiers des mnages urbains et un tiers des mnages ruraux ayant fait l'objet de l'enqute femme. Pralablement fix 1200 hommes dont 10 pour cent de non rponse soit 1080 hommes, l'enqute a touch la fin du travail sur le terrain un total de 970 hommes dont 708 en milieu rural et 262 en milieu urbain. Mais ayant slectionn au pralable 991 hommes ligibles, on a de ce fait un taux de rponse de 97,5 pour cent.

L'chantillon des enfants est compos des enfants de 3 36 mois, issus des femmes qui ont fait l'objet d'une enqute individuelle. Sur 1694 enfants ligibles, 1538 (soit 91%) ont t mesures avec succs. Au total, 156 enfants ont t exclus pour les raisons suivantes: 17 enfants taient absents le jour de l'interview ou leur mre a refus de les laisser mesurer et 139 enfants avalent des mesures qui ont t juges errones.

Questionnaires

Overview

L'EDS-Mali a utilis trois types de questionnaires: une feuille de mnage, un questionnaire individuel femme et un questionnaire individuel homme. Les questionnaires individuels ont t traduits en quatre langues nationales: bamanakan, fulfulde, songhoy et tamasheq. En ralit, le questionnaire tamasheq n'a t utilis que pendant le pr-test.

QUESTIONNAIRE MENAGE

Il a permis:
- d'enregistrer les informations suivantes sur les membres des mnages slectionns: les noms et prnoms, le lien de parent, le sexe, l'ge en annes rvolues, le statut de rsidence.
- de slectionner toutes les femmes ges de 15 49 ans, rsidentes prsentes ou visiteuses des mnages tirs pour l'enqute femme, et tous les hommes gs de 20 55 ans, rsidents prsents ou visiteurs des mnages slectionns pour l'enqute homme.

QUESTIONNAIRE INDIVIDUEL FEMME

Le questionnaire individuel femme de l'EDS-Mali est driv du questionnaire modle du projet des Enqutes Dmographiques et de Sant de l'IRD/Westinghouse. Il comprend huit sections rparties comme il suit:
- Section 1: Caractristiques de l'enqute
- Section 2: Reproduction
- Section 3: Contraception
- Section 4: Sant et allaitement
- Section 5: Mariage
- Section 6: Prfrences en matire de fcondit
- Section 7: Caractristiques du conjoint et activit rofessionnelle de la femme
- Section 8: Poids et taille des enfants de 3 36 mois

QUESTIONNAIRE INDIVIDUEL HOMME

Ce questionnaire ne comporte que deux sections: les caractristiques des enquts et la contraception. Partant de l'hypothse selon laquelle les hommes ont un pouvoir de dcision qui influence de manire significative les attitudes et les pratiques de leurs conjointes en matire de contraception, il a paru ncessaire, pour avoir une ide prcise de la situation, d'en faire une valuation auprs de la population masculine.

Data Collection Mode

Face-to-face

DATA COLLECTION NOTES

L'EDS-Mali a utilis cinq quipes d'enqutrices/enquteurs, rparties au dpart par langue. Les trois quipes bamanakan couvraient les cinq rgions forte population bambaraphone (Kayes, Koulikoro, Sikasso, Sgou et le District de Bamako) tandis que les autres intervenaient dans les rgions respectives d'usage des langues fulfulde (Mopti) et songhoy (Tombouctou et Gao). Par la suite, la constitution d'quipes plurilingues devait s'avrer utile pour pouser les ralits du terrain.

L'enqute sur le terrain a dmarr en mars 1987 et s'est acheve en aot 1987. Elle a t prcde par les oprations de dnombrement qui avaient eu lieu trois mois auparavant et une formation d'un mois des enqutrices/enquteurs. Cette formation a t faite en deux phases: une alphabtisation fonctionnelle des agents et une formation aux techniques de collecte de donnes.

Data Processing

Data Editing

Prcde d'une formation d'une semaine, la saisie de l'EDS-Mali a commenc en avril 1987, soit un mois aprs le dbut de l'enqute sur le terrain. Elle s'est poursuivie simultanment avec celle-ci et a pris fin dbut septembre 1987. Le nettoyage des fichiers a commenc la suite de la saisie et s'est achev fin novembre 1987. Dans le mme temps, a eu lieu une phase d'laboration et d'achvement des programmes prliminaires de tabulation. La tabulation des rsultats dnitifs a eu lieu au mois de mars 1988. L'ensemble de ces oprations a t men sur micro-ordinateurs, avec le logiciel ISSA (Integrated System for Survey Analysis), et avec l'assistance technique soutenue de l'IRD/Westinghouse.

Data Appraisal

Estimates of Sampling Error

Les estimations ont t obtenues partir d'un chantillon pondr de 3200 femmes ges de 15 49 ans et de 970 hommes gs de 20 55 ans. Si l'enqute avait t effectue auprs d'autres rpondants, on a tout lieu de penser que les frquences des rponses auraient t quelque peu diffrentes de celles qu'on a prsentes. C'est l'incertitude de cette hypothse que reflte l'erreur de sondage; celle-ci permet donc de mesurer le degr de variation des rponses suivant l'chantillon. L'erreur-type (ET) est un indice particulirement utile pour mesurer l'erreur de sondage. On l'estime partir de la variance des rponses dans l'chantillon mme. Cet indice a pour proprit que:
1) dans 2 chantillons sur 3, la valeur vraie d'un paramtre pour l'ensemble d'une population se trouve l'intrieur de l'intervalle +/- ET, et aussi l'intrieur de l'intervalle +/- ET de la l'estimation observe.
2) dans 19 chantillons sur 20, la valeur vraie d'un paramtre pour l'ensemble d'une population se trouve l'intrieur de +/- 2 ET.

A titre d'exemple, pour l'ensemble des femmes, l'EDS-Mali a donn un nombre moyen d'enfants ns vivants de 3,963 auquel correspond une erreur-type de 0,69 enfant. La fourchette dans laquelle se place la moyenne + 2 ET est donc de 3,826 4,100. La probabilit que la vraie valeur ne soit pas l'intrieur de cet intervalle est de 5 pour cent, si on suppose que les femmes enqutes ont rpondu correctement aux questions dans le tableau des naissances.

Il existe un deuxime indice souvent utile qui s'intitule la racine carre de l'effet du plan de sondage ou effet de grappe: c'est le rapport de l'erreur-type observe sur l'erreur-type qu'on aurait obtenue si on avait eu recours un sondage alatoire simple. Cet indice rvle dans quelle mesure le plan de sondage qui a t choisi (au Mail, un chantillon degr6s multiples stratifis) se rapproche d'un chantillon alatoire simple de la mme taille. Autrement dit, la REPS mesure la perte de prcision de sondage due au fait qu'on a utilis un plan de sondage complexe. Les deux principaux facteurs qui d6terminent sa valeur sont le nombre moyen de mnages tirs dans chaque grappe et l'homognit relative des rponses pour une variable donne, l'intrieur et entre les grappes. Pour des chantillons tirs partir de trs petites grappes, pour des trs petits sous-chantillons dans des grappes de n'importe quelle taille, et pour des variables relativement homognes, on peut s'attendre ce que l'effet de grappes ne soit pas trs diffrent de 1. Ceci veut dire qu'on aura perdu trs peu en matire de prcision d'chantillonnage, du fait du tirage d'un chantillon en grappes par rapport un soudage alatoire simple.

Questionnaires

Enquête Démographique et Santé 1987 - questionnaire ménage

Title	Enquête Démographique et Santé 1987 - questionnaire ménage
Author(s)	Institut du Sahel, Centre d'Etudes et de Recherche sur la Population pour le Développement (CERPOD)
Date	1987-03-01
Country	Mali
Language	French
Contributor(s)	Institute for Resource Development
Description	Il a permis: - d'enregistrer les informations suivantes sur les membres des ménages sélectionnés: les noms et prénoms, le lien de parenté, le sexe, l'âge en années révolues, le statut de résidence. - de sélectionner toutes les femmes âgées de 15 à 49 ans, résidentes présentes ou visiteuses des ménages tirés pour l'enquête femme, et tous les hommes âgés de 20 à 55 ans, résidents présents ou visiteurs des ménages sélectionnés pour l'enquête homme.

Enquête Démographique et Santé 1987 - questionnaire femme

Title	Enquête Démographique et Santé 1987 - questionnaire femme
Author(s)	Institut du Sahel, Centre d'Etudes et de Recherche sur la Population pour le Développement (CERPOD)
Date	1987-03-01
Country	Mali
Language	French
Contributor(s)	Institute for Resource Development
Description	Le questionnaire individuel femme de l'EDS-Mali est dérivé du questionnaire modèle du projet des Enquêtes Démographiques et de Santé de l'IRD/Westinghouse. Il comprend huit sections réparties comme il suit: Section 1 Caractéristiques de l'enquêtée Section 2 Reproduction Section 3 Contraception Section 4 Santé et allaitement Section 5 Mariage Section 6 Préférences en matière de fécondité Section 7 Caractéristiques du conjoint et activité rofessionnelle de la femme Section 8 Poids et taille des enfants de 3 à 36 mois

Enquête Démographique et Santé 1987 - questionnaire individuel homme

Title	Enquête Démographique et Santé 1987 - questionnaire individuel homme
Author(s)	Institut du Sahel, Centre d'Etudes et de Recherche sur la Population pour le Développement (CERPOD)
Date	1987-03-01
Country	Mali
Language	French
Contributor(s)	Institute for Resource Development

Description	Ce questionnaire ne comporte que deux sections: les caractéristiques des enquêtés et la contraception. Partant de l'hypothèse selon laquelle les hommes ont un pouvoir de décision qui influence de manière significative les attitudes et les pratiques de leurs conjointes en matière de contraception, il a paru nécessaire, pour avoir une idée précise de la situation, d'en faire une évaluation auprès de la population masculine.
