Sampling

Sampling Procedure

A amostra utilizada para o Inqurito Demogrfico e de Sade de 1997 (IDS), uma amostra probabilstica seleccionada em duas etapas: a primeira consistiu na seleco de reas de enumerao e a segunda, na seleco de agregados familiares. A amostra est constituda por 398 reas de enumerao seleccionadas, mas s 388 foram implementadas, distribudas proporcionalmente nas reas urbanas e rurais dentro de cada provncia. A amostra permite estimativas slidas de certas variveis a nvel de cada uma das 10 provncias e da Cidade de Maputo onde ela foi incrementada. Embora inicialmente a amostra fosse planeada dentro de cada provncia para ser auto-ponderada; por motivos de confiabilidade do marco amostral, a amostra acabou no sendo auto-ponderada e da a necessidade de usar factores de ponderao para obter estimativas a nveis de agregados maiores tais como provncias ou o total do pas.

O universo da amostra estudada cobre aproximadamente toda a populao do pas. Foram excludas da amostra certas reas, como as minadas, as quais representam uma fraco muito pequena do territrio do pas.

O tamanho da amostra mencionada permite estimativas slidas (erro padro relativo inferior a 10 por cento) a nvel nacional, para praticamente a maioria das variveis estudadas nas mulheres em idade reprodutiva (MIR). Tambm existem estimativas consistentes a nvel das reas urbanas e rurais, e a nvel das provncias onde a amostra foi incrementada.

UNIDADES AMOSTRAIS
As Unidades Primrias de Amostra (UPA) so as reas de enumerao (AEs). Em mdia, cada reade enumerao tem entre 100 e 200 agregados familiares. reas de enumerao pequenas foram agrupadas s outras contguas da mesma localidade. Dentro de cada rea enumerao, cada agregado familiar a localizado corresponde a uma unidade secundria da amostra (USA).

ESTRATIFICAO
Para uma seleco optimizada (menor erro amostral) das UPAs, agrupou-se as reas de enumerao por rea de residncia urbana e rural dentro de cada provncia. Tambm considerou-se uma estratificao implcita dentro da provncia para os distritos em forma serpentina, geograficamente.

MARCO AMOSTRAL
Dadas as circunstncias histricas no pas, no se dispunha dum marco amostral actualizado, utilizou-se como informao bsica a cartografia correspondente as onze cidades capitais de provncia para a seleco das UPAs (quarteires). Para o resto do pas o marco das UPAs foi a lista de localidades (aldeias ou comunidades) consideradas na lista de votantes das eleies gerais e multipartidrias de 1994.

SELECO DAS UPAS
Elaborou-se uma frequncia acumulada do nmero de quarteires nas cidades capitais e da populao eleitoral para as comunidades rurais, calculou-se um intervalo amostral (nmero total de quarteires ou total de populao eleitoral por domnio dividida pelo nmero de UPAs a serem seleccionadas) e se seleccionou as UPAs para a amostra aplicando sistematicamente o intervalo amostral a partir dum ponto de partida aleatrio. Este procedimento de seleco conhecido por seleco sistemtica com probabilidade proporcional ao tamanho dos agregados familiares.

SELECO DAS USAS
Para cada UPA seleccionada obteve-se uma lista de agregados familiares durante o processo de actualizao cartogrfica e de agregados familiares das UPAs seleccionadas. Inicialmente trabalhou-se supondo-se que a amostra dentro de cada UPA auto-ponderada, quer dizer, todo agregado familiar seleccionado na provncia tinha a mesma probabilidade de seleco. Entretanto, dado que a informao destas fontes foram muita diversas e no muito confiveis, as probabilidades de seleco eram muito inconsistentes. Por estas razes, decidiu-se implementar uma metodologia para tornar possvel os ajustes necessrios para essas deficincias de informao. Assumiu-se que as reas de enumerao urbanas (ou conglomerados censitrios) foram seleccionadas com probabilidade proporcional a densidade dos agregados familiares em cada unidade. A densidade foi calculada dividindo-se o nmero total de agregados familiares pela superfcie da rea de enumerao, portanto tanto, o total de agregados familiares foi obtido durante a actualizao e a superfcie da rea de enumerao foi obtida durante a implementao do inqurito.

Response Rate

Dos 11,059 agregados familiares que foram seleccionados para o inqurito de mulheres, quase 8.1 por cento no se encontrava no domiclios desocupados, destrudos ou por outras razes. Nos 9,279 agregados familiares as entrevistas foram

completas, para uma taxa de resposta de 95.9 por cento, excluindo do clculo os agregados familiares no disponveis para as entrevistas pelas razes j mencionadas. Dum total de 9,590 mulheres elegveis entrevistou-se 8,779, obtendo-se uma taxa de resposta de 91.5 por cento.

A taxa de resposta combinada de agregados familiares e mulheres foi de 88 por cento, bastante satisfatria para este tipo de inqurito, sobretudo tomando em conta as difceis condies que apresentam algumas provncias do pas para trabalho de campo. A melhor taxa de cobertura foi atingida nas Provncias de Niassa, Manica e Gaza (92.1, 91.1 e 91.9 por cento, respectivamente) e a pior na Provncia da Zambzia
(80.3 por cento).

Dos 3,422 agregados familiares que foram seleccionados, quase 6.7 por cento no se encontravam disponveis, pois a casa encontrava-se desocupada, destrudas ou por outras razes. Nos 3,193 agregados familiares a entrevista foi completa, correspondendo a uma taxa de resposta de 96.8 por cento, excluindo do clculo os agregados familiares no disponveis para entrevistas por as razes j anunciadas. Do total de 2,889 homens elegveis logrou-se entrevistar 2,335, correspondendo a uma taxa de resposta de 80.8 por cento.

A taxa de resposta combinada de agregados familiares e mulheres foi de 78 por cento (10 pontos menos que a das mulheres), bastante satisfatria para este tipo de inquritos, sobretudo tomando em conta as difceis condies que apresentam algumas provncias do pas para trabalho de campo. A melhor taxa de cobertura foi atingida nas Provncias de Cabo Delgado e Manica (82.1, e 85.8 por cento, respectivamente) e a pior na Provncia de Tete (66.9 por cento).

Questionnaires

Overview

Para a recolha de dados, adoptou-se metodologia de entrevistas aos agregados familiares de casa em casa, com aplicao de trs tipos de questionrios:
- Questionrio de Agregados Familiares;
- Questionrio de Mulheres;
- Questionrio de Homens.

Os questionrios tiveram por base o modelo utilizado pelos Inquritos Demogrficos e de Sade para a terceira fase, contextualizados e acrescidos de questes especficas em atendimento s necessidades de dados para o Pas. Para facilitar a comunicao com a populao analfabeta estes questionrios foram traduzidos para dois idiomas maternos (Emakua e Xitsonga) e devidamente pr-testados na Cidade de Maputo, entre Outubro e Novembro de 1996.

DATA COLLECTION NOTES

ESTRUTURA DO TRABALHO DE CAMPO E CONTROLE DE QUALIDADE

O trabalho de campo foi executado por 11 equipas, uma por provncia, constitudas por seis pessoas cada: Supervisor, Crtico de Campo e quatro Inquiridoras, alm do motorista. O Ministrio de Sade proporcionou a maior parte do pessoal de campo, enquanto que os restantes eram das Delegaes Provinciais do INE ou contratados pelo Projecto.
As Supervisoras tiveram a seu cargo a responsabilidade de medir o peso e altura das crianas e das mes. O trabalho de campo contou com uma estreita cooperao das autoridades locais e dos guias que apoiaram na localizao das agregados familiares seleccionados.

O trabalho de campo foi acompanhado pelo Director Tcnico, Consultor Residente da Macro e por dois Coordenadores regionais que realizaram numerosas visitas as equipas.
Alm disso, durante a recolha de dados foi operacionalizado um rigoroso controle a nvel de cada equipa sobre o processo de recolha, mediante a deteco de erros por parte da crtica de campo, o que permitiu a correco imediata ainda no terreno. A nvel da coordenao central, os crticos de dados fizeram reviso adicional dos questionrios e os problemas encontrados eram comunicados as respectivas equipas, via "memorandum", pela coordenao regional.

O processamento interactivo e por lotes de informao atravs do programa ISSA (Integrated System for Survey Analysis), permitiu, a nvel central, a obteno peridica de resultados parciais, para anlise dos dados recolhidos at dado momento, mediante a produo de tabelas para acompanhamento e controle de qualidade. Os resultados dessas tabulaes foram reportados em retro alimentao s entrevistadoras, assegurando a qualidade dos dados.

FORMAO DO PESSOAL DE CAMPO E RECOLHA DE DADOS

A fim de assegurar a uniformidade da formao e dos procedimentos de trabalho de campo, todo o pessoal de campo foi formado ao mesmo tempo por tcnicos do INE e da Macro Internacional. As equipas receberam treinamento terico-prtico durante 3 semanas e meia, atravs de aulas expositivas, dinmica de grupo, dramatizao, exerccios e prtica de campo. O curso decorreu de l4 a 27 de Fevereiro de 1997; 50 mulheres e 22 homens participaram na formao. Dada a diversidade tnica e lingustica de Moambique, todos os participantes eram originrios das provncias onde deveriam trabalhar, e falavam correctamente os idiomas predominantes nessas zonas. Concluda a formao, as equipas iniciaram a recolha de dados em Maro de 1997, tendo terminado em Julho.

Data Processing

Data Editing

A entrada de dados comeou em Maro, duas semanas aps o incio da recolha, tendo terminado em Agosto, um ms depois do trmino do trabalho de campo. As actividades de processamento do inqurito envolveram processos manuais e automticos: recepo e verificao dos questionrios, crtica (reviso e codificao), digitao, edio, anlise de inconsistncias e superviso, envolvendo 1 supervisor geral, 4 crticos de dados e 20 digitadores. Fez-se uso do software interactivo ISSA para micro-computadores, programa desenhado especialmente para agilizar a digitao dos dados, crtica, obteno de frequncias e tabulaes. Este programa permite verificar interactivamente os intervalos das variveis, detectar inconsistncias e controlar o fluxo interno dos dados durante a digitao dos questionrios.

Data Appraisal

Estimates of Sampling Error

Por tratar-se dum inqurito por amostragem, os resultados do IDS-97 em Moambique apresentados neste relatrio so estimativas que esto afectadas por dois tipos de erros: erros amostrais e erros noamostrais. Os erros no-amostrais produzem-se durante a fase de recolha e processamento de dados e os chamados erros amostrais resultam do facto de ter-se entrevistado s uma parte da populao e no a sua totalidade.

O primeiro tipo de erro inclui a falta de cobertura de todas as mulheres seleccionadas, erros na formulao das perguntas e no registo das respostas, confuso ou incapacidade das mulheres em dar informao e erros de codificao ou de processamento. Neste estudo tentou-se reduzir ao mnimo este tipo de erros atravs duma srie de procedimentos que se usam em amostras bem desenhadas e executadas como por exemplo, o desenho cuidadoso, as numerosas provas do questionrio, a intensa capacitao das entrevistadoras, a superviso permanente do trabalho de campo e a reviso dos questionrios no campo por parte do pessoal de crtica. A superviso apropriada na etapa de codificao e processamento dos dados e limpeza cuidadosa dos arquivos, a retro alimentao s supervisoras, as crticas s entrevistadoras a partir dos quadros de controle de qualidade, tambm contribuiram para minimizar os erros. Os elementos de avaliao disponveis assinalam que este tipo de erros manteve-se dentro das margens razoveis no IDS-97. No que se segue no se faz mais refernncia aos erros alheios a amostra, seno unicamente aos chamados erros amostrais.

A amostra das mulheres estudadas no IDS-97 no seno uma das demais amostras possveis com o mesmo tamanho que poderiam ter sido seleccionadas na populao a estudar, utilizando a mesma tcnica de amostragem. Cada uma dessas amostras teria gerado resultados em certa medida diferentes daqueles obtidos pela amostra que foi efectivamente seleccionada. A variabilidade que se observaria entre todas as amostras possveis constitui o erro amostral. Embora o grau de variabilidade no seja conhecido com exactido, pode ser estimado a partir dos resultados proporcionados pela amostra efectivamente seleccionada.

O erro amostral mede-se por meio do erro padro. O erro padro duma mdia, percentagem, diferena ou qualquer outra estatstica calculada com os dados da amostra define-se como a raiz quadrada da varincia da estatstica, e uma medida de sua variao em todas as amostras possveis. Em consequncia, o erro padro mede o grau de preciso com que a mdia, a percentagem, ou outra qualquer estatstica baseada na amostra se aproxima do resultado que se obteria se todas mulheres da populao tivessem sido entrevistadas nas mesmas condies.

O erro padro pode ser utilizado para calcular intervalos dentro dos quais supe-se, com determinado grau de confiana, que o valor real para a populao recair. Para qualquer medida estatstica calculada a partir da amostra (por exemplo, uma percentagem), o valor dessa medida cair num intervalo de mais ou menos duas vezes o erro padro dessa medida em 95 por cento de todas as amostras possveis de igual desenho e tamanho.

Se as mulheres includas na amostra tivessem sido seleccionadas na forma aleatria simples, teria sido possvel utilizar directamente as frmulas muito conhecidas que aparecem nos textos de estatstica para calcular erros padro e limites de confiana e para a realizao de testes e hipteses. Entretanto, como foi mencionado, o desenho utilizado complexo, para o qual se requerem frmulas especiais que consideeam os efeitos da estratificao e conglomerao.

Um valor de EDIS igual a 1.0 indica que o desenho utilizado to eficiente quanto uma amostragem aleatria simples, enquanto que um valor superior a 1.0 indica que o uso de conglomerados produziu uma varincia superior a que obteria com uma amostragem aleatria simples do mesmo tamanho.

Em geral, os erros padro so pequenos e que a amostra pode ser classificada de bastante precisa; isto particularmente claro na antepenltima coluna onde aparecem os erros relativos. Note-se que os efeitos de desenho tendem a aumentar para as classificaes geogrficas e a diminuir para aquelas que cruzam toda a amostra, como a idade.

Moçambique Inquérito Demográfico e de Saúde 1997 - Relatorio Final

Title	Moçambique Inquérito Demográfico e de Saúde 1997 - Relatorio Final
Author(s)	Instituto Nacional de Estatística (INE)
Date	1998-09-01
Country	Mozambique
Language	Portuguese
Contributor(s)	Macro International Inc.

Description	Este relatório apresenta os resultados do Inquérito Demográfico e de Saúde (IDS), realizado pelo Instituto Nacional de Estatística e pelo Ministério da Saúde, entre Março e Junho de 1997. O Inquérito Demográfico e de Saúde (IDS) em Moçambique faz parte dum programa internacional de inquéritos desenvolvido pela Macro International Inc., através de um contrato com a USAID - Washington, com o propósito de apoiar aos governos e instituições privadas dos países em desenvolvimento na realização de inquéritos nacionais por amostragem, nas áreas de população e saúde. O Programa IDS tem por objectivo: - Subsidiar a formulação de políticas e implementação de programas nas áreas de população e saúde; - Aumentar a base internacional de dados sobre população e saúde para acompanhamento e avaliação; - Aprimorar metodologia de inquérito por amostragem; e - Consolidar, na área de inquérito, a capacidade técnica da instituição executora no país participante do Programa.
