Sampling

Sampling Procedure

L'Enquête Démographique et de Santé au Niger (EDSN) a prévu un échantillon de 6000 femmes âgées de 15 à 49 ans. Le Recensement Général de la Population (RGP), réalisé au Niger en 1988, a servi de base de sondage. Pour répondre certaines contraintes d'organisation des travaux sur le terrain, il a été nécessaire d'exclure de cette base certaines zones géographiques qui étaient d'accès difficile, notamment les zones pastorales du désert du Nord, et, de plus, la population est très faible. L'EDSN couvre donc tous les départements du Niger sauf, dans le département d'Agadez, la zone restante d'Arlit et l'arrondissement de Bilma dans sa totalité. Les zones exclues, essentiellement désertiques et qui représentent environ un tiers de la superficie du pays, représentent moins de 1 pour cent de la population totale.

BASE DE SONDAGE

Le fichier informatique des 4 479 zones de recensement (ZD), créées en 1987/1988 par le Bureau Central de Recensement pour les besoins du recensement, a servi de base de sondage pour l'EDSN. Des cartes d'assez bonne qualité, qui figurent les limites de toutes les ZD qui constituent le canton, existent pour chaque ZD et pour chaque canton.

Un classement du fichier par ordre géographique était nécessaire avant d'effectuer l'échantillonnage des ZD. Bien que les ZD du fichier soient déjà stratifiés par milieu urbain/rural à l'intérieur de chaque département, on a introduit une stratification implicite en ordonnant les arrondissements et, ultérieurement, les cantons à l'intérieur de chaque arrondissement, par ordre géographique.

CARACTERISTIQUES DE L'ECHANTILLON

L'échantillon de l'EDSN est basé sur un sondage aléatoire stratifié et tiré en deux degrés. Au premier degré, 235 zones de recensement ont été tirées à partir de l'ensemble des ZD avec des probabilités proportionnelles à leur taille. Un recensement exhaustif des ménages résidant dans chaque grappe a fourni une liste de ménages à partir de laquelle on a tiré, au deuxième degré, un échantillon de ménages.

DOMAINES D'ETUDE ET STRATIFICATION

Un domaine d'étude est une sous-population pour laquelle on propose des analyses basées sur les informations recueillies par l'enquête. Les trois domaines d'étude importants au Niger sont : la communauté urbaine de Niamey, le reste du milieu urbain et le milieu rural.

La stratification urbain/rural adoptée dans la base de sondage suit une définition administrative : le milieu urbain comprend tous les chefs-lieux de département et d'arrondissement qui peuvent, ou non, posséder les caractéristiques socio-économiques normalement accordées au milieu urbain. Pour cette raison, il était nécessaire de considérer la communauté urbaine de Niamey comme tant un domaine séparé et de lui accorder des analyses propres.

Quant aux chefs-lieux de départements et d'arrondissements, il était possible de reclassifier certains d'entre eux dans le milieu rural suivant leurs caractéristiques socio-économiques. Cependant, cette nouvelle classification urbain/rural n'a pas été adoptée car il aurait été difficile de déterminer les nouveaux critères de classification. De plus, elle aurait rendu les résultats de l'EDSN difficilement comparables aux résultats du recensement et des autres enquêtes qui ont adopté la classification administrative.

L'effectif cible de l'échantillon tant de 6000 femmes, un échantillon proportionnel aurait accordé seulement 360 femmes à Niamey et 600 femmes au reste du milieu urbain, ce qui aurait été trop faible pour des analyses approfondies au niveau de ces deux domaines. On a donc multiplié le taux de sondage du milieu rural par 4 pour obtenir celui de Niamey et par 3 pour obtenir celui du reste du milieu urbain.

PARAMETRES DE SONDAGE

D'après les résultats préliminaires du RGP, la population résidente de femmes âgées de 15 à 49 ans représente 6 pour cent et 10 pour cent, respectivement, à Niamey et dans le reste du milieu urbain. (Ces chiffres ne tiennent pas compte des femmes qui résident dans l'arrondissement de Bilma et dans la zone restante d'Arlit qui sont exclus de la couverture de l'EDSN)

D'après les résultats du RGP, le nombre de femmes âgées de 15 à 49 ans est de 1,32 par ménage dans le milieu urbain, y compris Niamey, et de 1,45 femmes par ménage dans le milieu rural. Le nombre de ménages tirés dans chaque domaine a été calculé de la manière suivante : Nombre de ménages = Nombre de femmes / Nombre de femmes par ménage.

On a aussi prévu un taux de perte de la part des ménages tirés ou des femmes identifiées dans ces ménages. L'expérience

d'autres enquêtes EDS dans les pays africains permet de supposer un taux de réponse de 90 pour cent pour les ménages et de 90 pour cent pour les femmes, soit un taux global de 80 pour cent.

Le nombre de grappes tirées dépend du nombre de femmes à enquêter dans chaque grappe. Les analyses menées après d'autres enquêtes analogues indiquent que le nombre optimal de femmes à enquêter par grappe est de l'ordre de 30 femmes dans le milieu rural et de 20 femmes dans le milieu urbain. En décidant un tirage de 25 ménages en moyenne dans chaque grappe rurale, et de 20 ménages en moyenne à Niamey et dans le reste du milieu urbain (ce qui reviendrait à enquêter, respectivement, 29 et 21 femmes en moyenne, en tenant compte du nombre de femmes par ménage et du taux de réponse), on a abouti à un nombre total de 235 grappes, dont 50 à Niamey, 55 dans le reste du milieu urbain et 130 dans le milieu rural. Ceci correspond à 1 000 ménages à Niamey, 1 100 ménages dans le reste du milieu urbain et 3 250 ménages dans le milieu rural. En conséquence, le taux de sondage du milieu rural a été multiplié par 4,3 pour obtenir le taux de sondage de Niamey et par 2,7 pour obtenir celui du reste du milieu urbain. Le nombre de grappes allouées à chaque strate est proportionnel à l'effectif des ménages recensés dans la strate.

ECHANTILLON MARI

L'enquête mari au Niger porte sur la moitié des ménages sélectionnés pour l'enquête principale. Pour pouvoir mener aussi bien une analyse comparative femme-mari qu'une analyse portant uniquement sur les maris, on a enquêté les maris de toutes les femmes éligibles trouvées dans un ménage sur deux. Le tirage des ménages pour l'enquête-mari a été effectué au même moment que le tirage des ménages dans toutes les grappes, de façon systématique, et avec une probabilité égale un ménage sur deux.

Response Rate

Toutes les 235 grappes sélectionnées ont pu être enquêtées au cours de l'EDSN, le nombre de ménages sélectionnés dans chaque grappe variant de 10 à 45. Au total, 5 819 ménages ont été sélectionnés et, parmi eux, 5 500 ménages ont été identifiés au moment de l'enquête. Parmi ces 5 500 ménages, 5 242 ont pu être enquêtés avec succès, soit un taux de réponse de 95 pour cent comme l'indique le Tableau ci-dessous.

Dans les 5 242 ménages enquêtés, 6 750 femmes ont été identifiées comme étant éligibles pour l'enquête individuelle, et un sous-échantillon de 1 843 maris de femmes éligibles a été sélectionné pour l'enquête mari. Parmi les femmes éligibles, 6 503 ont été enquêtées avec succès, soit un taux de réponse de 96 pour cent. Parmi les 1 843 maris éligibles, 1 570 ont été enquêtés avec succès, soit un taux de réponse de 85 pour cent.

Questionnaires

Overview

L'EDSN a utilisé quatre types de questionnaires :

- un questionnaire ménage un questionnaire individuel femme
- un questionnaire individuel mari un questionnaire communautaire.

Les questionnaires individuels ont été traduits dans les deux principales langues du pays, le haoussa et le djerma.

a) Le questionnaire ménage permet d'établir la liste de tous les membres du ménage et des visiteurs et de collecter, leur sujet un certain nombre d'informations telles que le sexe, l'âge, l'état matrimonial, le niveau d'instruction... En outre, par le biais du questionnaire ménage, sont collectées quelques caractéristiques des logements devant servir à évaluer les conditions socio-économiques et environnementales dans lesquelles vivent les femmes qui seront enquêtées individuellement. Cependant, l'objectif principal de ce questionnaire est de permettre l'identification des femmes éligibles et, éventuellement, de leur mari; le questionnaire ménage fournit également les informations permettant d'établir le dénominateur pour le calcul des taux démographiques (natalité, mortalité, fécondité).

b) Le questionnaire individuel femme qui constitue le cœur de l'EDSN a été élaboré sur la base du questionnaire Module B de DHS (questionnaire pour les pays à faible prévalence contraceptive). Il comprend également une page de couverture, similaire à celle du questionnaire ménage, sur laquelle sont enregistrées les informations d'identification et les résultats des interviews. Avec les neuf sections qui le composent, il sert à recueillir des informations sur les thèmes suivants :

- Caractéristiques socio-démographiques : cette section comprend trente questions qui portent sur le lieu de résidence, l'âge, la scolarisation, l'alphabétisation, la nationalité et la religion.
- Reproduction : cette deuxième section qui comprend vingt-huit questions permet de collecter des informations au sujet des naissances que la femme a eues durant sa vie (enfants vivants, enfants décédés), au sujet de l'état de grossesse au moment de l'enquête, des dates et durées de menstruation, de l'âge de la femme aux premières règles et de la connaissance de la période féconde dans le cycle menstruel.
- Connaissance et utilisation de la contraception : trente-neuf questions composent cette section qui permet de recueillir des informations sur la connaissance et l'utilisation des diverses méthodes contraceptives.
- Grossesse et allaitement, vaccination et santé des enfants : deux sous-parties composent cette section : la première qui comporte quarante questions permet d'obtenir des informations concernant la période de la grossesse, les soins prénatals, le lieu d'accouchement et la qualification de la personne ayant assisté la femme, le retour des règles et la reprise des rapports sexuels après la naissance du nouveau-né. Concernant l'allaitement, les questions portent sur sa fréquence et sa durée, sur le type d'allaitement (maternel ou artificiel), ainsi que sur l'utilisation des différents compléments nutritionnels. La deuxième sous-partie, de cinquante-deux questions, porte sur la vaccination et la santé des enfants. Il s'agit de la fréquence et du traitement de la fièvre, de la toux et de la diarrhée chez les enfants de moins de cinq ans.
- Nuptialité : cette section comporte dix-sept questions qui permettent de saisir l'état matrimonial de la femme, la cohabitation avec le mari lorsqu'elle est mariée, le régime de mariage et l'activité sexuelle.
- Préférences en matière de fécondité : cette section recueille des informations sur le désir d'enfants supplémentaires, l'intervalle préféré et idéal entre les naissances, et l'attitude du mari concernant la taille de la famille.
- Caractéristiques du conjoint et activité économique de la femme : ce niveau, seize questions ont été posées afin de connaître les caractéristiques socio-professionnelles du conjoint des femmes en union et l'activité professionnelle de ces femmes. Mortalité maternelle : cette section vise à obtenir des informations sur les décès provoqués par les grossesses et/ou les accouchements. On pose des questions concernant tous les frères et sœurs de la femme enquêtée.
- État nutritionnel des mères et des enfants de moins de 5 ans : cette section est réservée aux mesures anthropométriques des femmes enquêtées et de leurs enfants âgés de moins de cinq ans.

c) Le questionnaire mari qui est une forme simplifiée du questionnaire individuel femme permet de collecter des informations sur la connaissance et l'utilisation de la contraception, et sur les opinions des maris en matière de fécondité, de taille de la famille et de planification familiale.

d) Le questionnaire communautaire a pour objectif de recueillir quelques informations sur les infrastructures socio-économiques et sanitaires disponibles pour les 235 grappes sélectionnées.

DATA COLLECTION NOTES

PERSONNEL ET CALENDRIER DES ACTIVITES DE L'EDSN

Pour assurer une bonne réalisation des objectifs assignés l'EDSN, une Direction Nationale a été mise en place sous l'autorité d'un Directeur National. Le Directeur National était assisté par un Directeur Technique qui s'occupait de toutes les questions techniques; il encadrait les superviseurs ainsi que le personnel d'enquête; il assurait aussi la coordination générale des travaux informatiques.

D'autre part, des consultants nationaux ont effectué la traduction des questionnaires dans les deux principales langues nationales (le haoussa et le djerma) ainsi que la formation du personnel de terrain dans ces deux langues. Enfin il faut préciser que ce travail de l'équipe de l'EDSN a été complété par une assistance technique internationale dans plusieurs domaines (sondage, conception des questionnaires, formation du personnel d'enquête, traitement et analyse des données).

Le recrutement et la formation du personnel de terrain se sont effectués en trois étapes, le dénombrement, le pré-test et l'enquête principale.

Pour le dénombrement, compte tenu de la complexité de l'opération, 19 agents ont été recrutés parmi les agents de la DSCN et parmi les contractuels ayant déjà effectué la cartographie du RGP de 1988.

Pour le pré-test, 20 agents dont 16 des différents départements du pays et 4 de la DSCN ont été retenus pour suivre une formation de 21 jours. La formation en langues traditionnelles a été assurée par des spécialistes du Centre de Formation des Cadres de l'Alphabétisation (CFCA). Pour les travaux de terrain du pré-test, deux zones d'enquêtes ont été retenues : le quartier Boukoki IV (Communauté Urbaine de Niamey) pour le milieu urbain et les villages de Saguia, Diamoy, Kollo haoussa et Kollo djerma pour le milieu rural. D'une manière générale, le pré-test a permis d'identifier plusieurs problèmes concernant la formulation de certaines questions, la présentation des questionnaires et la traduction en langues traditionnelles.

En ce qui concerne l'enquête principale, le recrutement s'est effectué de la manière suivante:

- les membres de l'équipe technique de l'EDSN, sélectionnés au niveau de la DSCN, ont assuré la supervision des activités de terrain. Il faut préciser que l'équipe technique était composée d'un épidémiologiste du Ministère de la Santé Publique, d'une sociologue du Ministère du Développement Social, de la Population et de la Promotion de la Femme, de statisticiens et démographes de la DSCN et d'une démographe consultante;

- les chefs d'équipe et les contrôleuses (16 au total) ont été sélectionnés parmi les cadres des régions ayant effectué le pré-test;
- les enquêtrices (au nombre de 33) ont été sélectionnées au niveau de la Communauté Urbaine de Niamey, après la formation et d'après leurs résultats aux différents tests d'aptitude.

La formation qui a duré quatre semaines consistait, d'une part, en des exposés théoriques concernant les techniques d'enregistrement des informations et d'interview et, d'autre part, en des exercices sur la façon de remplir les questionnaires. Les cours étaient donnés en français et, par la suite, des compléments de formation ont été donnés en haoussa et djerma par des cadres de l'alphabétisation. En outre, des cadres du Ministère de la Santé sont intervenus durant la formation pour donner aux enquêtrices des informations sur le planning familial et la santé de la mère et des enfants. Après cette formation théorique, une formation sur le terrain s'est déroulée dans trois centres de Protection Maternelle et Infantile (PMI) de Niamey pour que les enquêtrices pratiquent la prise des mesures anthropométriques.

COLLECTE DES DONNEES

Après une formation de quatre semaines environ, huit équipes composées de quatre enquêtrices, une contrôleuse, un chef d'équipe et un chauffeur ont visité les 235 zones de dénombrement sélectionnées pour réaliser l'enquête principale. Au total, il a fallu près de quatre mois aux équipes (du 4 mars au 30 juin 1992) pour mener bien cette tâche.

SUPERVISION

Dans le cadre du suivi des travaux sur le terrain, des missions de supervision ont été organisées régulièrement. Ces missions avaient pour but d'apprécier les conditions de travail de chaque équipe, de contrôler la qualité du travail, de résoudre les problèmes éventuels rencontrés par les équipes, de contrôler les moyens mis à leur disposition, de les ravitailler en matériel et de ramener à Niamey les questionnaires des grappes enquêtées.

Data Processing

Data Editing

L'exploitation des données de l'EDSN s'est déroulée en quatre étapes :

- a) Vérification : la vérification consistait en un contrôle d'exhaustivité de l'échantillon par rapport aux fiches de terrain et en un contrôle sommaire de la cohérence des données. Ce travail, exécuté par quatre agents de vérification sous l'autorité d'un superviseur, a commencé trois semaines après le début de la collecte et a été mené parallèlement aux travaux de terrain. Cette vérification a permis d'améliorer la qualité des données recueillies.
- b) Saisie et édition des données : l'ensemble des opérations de saisie et d'apurement des données, ainsi que la tabulation ont été réalisées sur micro-ordinateurs au moyen du logiciel ISSA (Integrated System for Survey Analysis) développé par Macro International Inc. La saisie a été effectuée par six agents de saisie. Ces agents ont été formés en même temps que les enquêtrices avant de suivre leur propre formation sur micro-ordinateurs. À la suite de la saisie, les membres de l'équipe technique ont procédé à l'édition des données, savoir la vérification de la cohérence interne des réponses contenues dans les questionnaires. Pour apprécier la qualité des données et réduire le taux d'erreurs lors de la saisie, une double saisie était prévue par un autre agent. Cette double saisie a concerné dix pour cent des grappes.
- c) Apurement: après la saisie et l'édition des données d'une grappe, un programme de contrôle était exécuté pour vérifier la cohérence interne des réponses. À ce stade tous les fichiers de grappes sont fusionnés en un seul et unique fichier.
- d) Tabulation : il s'agit du développement et de l'exploitation des programmes destinés à fournir les tableaux de base nécessaires à l'élaboration du rapport préliminaire et du rapport final.

L'ensemble des opérations de contrôle et de nettoyage de fichier ainsi que la fabrication des données ont été réalisées au moyen du logiciel ISSA.

Data Appraisal

Estimates of Sampling Error

Les erreurs de sondage peuvent être évaluées statistiquement. Les estimations qui figurent dans ce rapport ont été obtenues à partir d'un échantillon de 6 503 femmes âgées de 15 à 49 ans. Si l'enquête avait été effectuée auprès d'autres enquêtes, on a tout lieu de penser que les fréquences des réponses auraient été quelque peu différentes de celles que l'on a présentées. C'est l'incertitude de cette assumption que reflète l'erreur de sondage; celle-ci permet donc de mesurer le degré de variation des réponses suivant l'échantillon.

L'erreur-type (ET) est un indice particulièrement utile pour mesurer l'erreur de sondage d'un paramètre (moyenne ou proportion). On l'estime à partir de la variance des réponses dans l'échantillon même : l'erreur-type est la racine carrée de la variance. Cet indice a pour propriété que dans 95 pour cent des échantillons de taille et caractéristique identiques, la valeur vraie d'un paramètre pour l'ensemble d'une population se trouve à l'intérieur de l'intervalle de ± 2 ET.

Il existe un deuxième indice très utile qui est la racine carrée de l'effet du plan de sondage (REPS) ou effet de grappe : c'est le rapport de l'erreur-type observée sur l'erreur-type qu'on aurait obtenue si on avait eu recours à un sondage aléatoire simple. Cet indice révèle dans quelle mesure le plan de sondage qui a été choisi se rapproche d'un échantillon aléatoire simple de la même taille : la valeur 1,0 de la REPS indique que le plan de sondage est aussi efficace qu'un échantillon aléatoire simple, alors qu'une valeur supérieure 1,0 indique un accroissement de l'erreur de sondage d'un plan de sondage plus complexe et moins efficace au point de vue statistique. Le logiciel CLUSTERS calcule aussi l'erreur relative et l'intervalle de confiance pour chaque estimation.

Les erreurs de sondage pour l'EDSN ont été calculées pour certaines des variables les plus intéressantes. Les résultats sont présentés en annexe du Rapport Final pour tout le pays, l'ensemble du milieu urbain, le milieu rural, la capitale Niamey, les autres centres urbains, et les cinq départements ou groupes de départements (Dosso, Maradi, Tahoua/Agadez, Tillabéri et Zinder/Diffa). Pour chaque variable, le type de statistique (moyenne ou proportion) et la population de base sont présentés dans le tableau D. 1 du Rapport Final. Les tableaux D.2 D. 11 présentent la valeur de la statistique (M), l'erreur-type (ET), le nombre de cas non-pondérés (N) et pondérés (N'), la racine carrée de l'effet du plan de sondage (REPS), l'erreur relative (ET/M), et l'intervalle de confiance ET 95% ($M \pm 2ET$) pour chaque variable.

En général, les erreurs relatives de la plupart des estimations pour l'ensemble du pays sont faibles, sauf dans le cas de très faibles proportions. On remarque certaines différences dans les erreurs relatives au niveau des sous-échantillons : par exemple, pour la variable "Enfants nés vivants des femmes âgées de 15 à 49 ans," l'erreur relative en tant que pourcentage de la moyenne estimée est, respectivement, de 1,4%, 2,0% et 3,6% pour l'ensemble des femmes du pays, pour le milieu urbain et pour Niamey. Pour la même variable, l'EDSN a donné un nombre moyen d'enfants nés vivants de 3,852 pour l'ensemble des femmes, auquel correspond une erreur-type de 0,056 enfant. La fourchette dans laquelle se place la moyenne ± 2 ET est donc 3,740 et 3,963. La probabilité que la vraie valeur du nombre moyen d'enfants nés vivants des femmes âgées de 15 à 49 ans soit à l'intérieur de cet intervalle est de 95%.

Si l'échantillon des femmes avait été tiré d'après un plan de sondage aléatoire simple, il aurait été possible d'utiliser des formules simples pour calculer les erreurs de sondage. Cependant, l'échantillon de l'EDSN est un échantillon stratifié à deux degrés. Par conséquent, on a besoin d'utiliser des formules plus complexes. Le logiciel CLUSTERS, développé par l'International Statistical Institute pour l'Enquête Mondiale sur la Fécondité, a été utilisé pour calculer les erreurs de sondage suivant la méthodologie statistique appropriée.

Other forms of Data Appraisal

On appelle erreurs de mesure les biais imputables à la mise en œuvre de la collecte et de l'exploitation des données telles que l'omission de ménages sélectionnés, la mauvaise interprétation des questions, soit de la part de l'enquêtrice, soit de la part de l'enquêté, ou encore les erreurs de saisie des données. Quoique tout le possible ait été fait pour minimiser ce type d'erreur pendant la mise en œuvre de l'EDSN, il est difficile d'éviter et d'évaluer toutes les erreurs de mesure.

Enquête Démographique et de Santé - Feuille Ménage

Title	Enquête Démographique et de Santé - Feuille Ménage
Author(s)	Direction de la Statistique et des Comptes Nationaux (DSCN)
Date	1992-03-01
Country	Niger
Language	French
Contributor(s)	Macro International, Inc.
Description	Le questionnaire ménage permet d'établir la liste de tous les membres du ménage et des visiteurs et de collecter, à leur sujet un certain nombre d'informations telles que le sexe, l'âge, l'état matrimonial, le niveau d'instruction... En outre, par le biais du questionnaire ménage, sont collectées quelques caractéristiques des logements devant servir à évaluer les conditions socio-économiques et environnementales dans lesquelles vivent les femmes qui seront enquêtées individuellement. Cependant, l'objectif principal de ce questionnaire est de permettre l'identification des femmes éligibles et, éventuellement, de leur mari; le questionnaire ménage fournit également les informations permettant d'établir le dénominateur pour le calcul des taux démographiques (natalité, mortalité, fécondité).

Country	Niger
Language	French
Contributor(s)	Macro International, Inc.

Description	<p>Le questionnaire individuel femme qui constitue le coeur de l'EDSN a été élaboré sur la base du questionnaire Modèle B de DHS (questionnaire pour les pays à faible prévalence contraceptive). Il comprend également une page de couverture, similaire à celle du questionnaire ménage, sur laquelle sont enregistrées les informations d'identification et les résultats des interviews. Avec les neuf sections qui le composent, il sert à recueillir des informations sur les thèmes suivants :</p> <ul style="list-style-type: none"> - Caractéristiques socio-démographiques : cette section comprend trente questions qui portent sur le lieu de résidence, l'âge, la scolarisation, l'alphabétisation, la nationalité et la religion. - Reproduction : cette deuxième section qui comprend vingt-huit questions permet de collecter des informations au sujet des naissances que la femme a eues durant sa vie (enfants nés vivants, enfants décédés), au sujet de l'état de grossesse au moment de l'enquête, des dates et durée de menstruation, de l'âge de la femme aux premières règles et de la connaissance de la période féconde dans le cycle menstruel. - Connaissance et utilisation de la contraception : trente-neuf questions composent cette section qui permet de recueillir des informations sur la connaissance et l'utilisation des diverses méthodes contraceptives. - Grossesse et allaitement, vaccination et santé des enfants : deux sous-parties composent cette section : la première qui comporte quarante questions permet d'obtenir des informations concernant la période de la grossesse, les soins prénatals, le lieu d'accouchement et la qualification de la personne ayant assisté la femme, le retour des règles et la reprise des rapports sexuels après la naissance du nouveau né. Concernant l'allaitement, les questions portent sur sa fréquence et sa durée, sur le type d'allaitement (maternel ou artificiel), ainsi que sur l'utilisation des différents compléments nutritionnels. La deuxième sous-partie, de cinquante-deux questions, porte sur la vaccination et la santé des enfants. Il s'agit de la fréquence et du traitement de la fièvre, de la toux et de la diarrhée chez les enfants de moins de cinq ans. - Nuptialité : cette section comporte dix-sept questions qui permettent de saisir l'état matrimonial de la femme, la cohabitation avec le mari lorsqu'elle est mariée, le régime de mariage et l'activité sexuelle. - Préférences en matière de fécondité : cette section recueille des informations sur le désir d'enfants supplémentaires, l'intervalle préféré et idéal entre les naissances, et l'attitude du mari concernant la taille de la famille. - Caractéristiques du conjoint et activité économique de la femme : à ce niveau, seize questions ont été posées afin de connaître les caractéristiques socio-professionnelles du conjoint des femmes en union et l'activité professionnelle de ces femmes. - Mortalité maternelle : cette section vise à obtenir des informations sur les décès provoqués par les grossesses et/ou les accouchements. On pose des questions concernant tous les frères et soeurs de la femme enquêtée. - Etat nutritionnel des mères et des enfants de moins de 5 ans : cette section est réservée aux mesures anthropométriques des femmes enquêtées et de leurs enfants âgés de moins de cinq ans.

Enquête Démographique et de Santé Niger 1992 - Rapport final

Title	Enquête Démographique et de Santé Niger 1992 - Rapport final
Author(s)	Direction de la Statistique et des Comptes Nationaux (DSCN)
Date	1993-09-01
Country	Niger
Language	French
Contributor(s)	Macro International, Inc.

Description	Ce rapport présente les principaux résultats de l'Enquête Démographique et de Santé (EDSN) réalisée au Niger en 1992 par le Ministère des Finances et du Plan (Direction de la Statistique et des Comptes Nationaux). L'EDSN, financée par l'Agence des Etats-Unis pour le Développement International (USAID), a bénéficié de l'assistance technique de Macro International Inc. L'EDSN fait partie du programme mondial des Enquêtes Démographiques et de Santé (Demographic and Health Surveys-DHS) dont l'objectif est de collecter, analyser et diffuser des données démographiques portant en particulier sur la fécondité, la planification familiale et la santé de la mère et de l'enfant.
