Sampling

Sampling Procedure

L'Enquête Démographique et de Santé au Tchad (EDST) a prévu un échantillon de 7000 femmes âgées de 15 à 49 ans. Elle couvre seulement la population scolaire et n'inclut pas les zones non-recensées de la préfecture du Ouaddai. La population non-recensée de cette préfecture a été estimée à 2 035, donc 0,03 % de la population scolaire, proportion très négligeable. Cependant, les zones non-recensées dans les six cantons du Logone Oriental ont été couvertes par l'EDST.

Trois principaux domaines d'étude ont été identifiés pour l'EDST. Ils correspondent à la capitale N'Djamena, l'ensemble des autres centres urbains et l'ensemble des milieux ruraux. Une première allocation proportionnelle de l'échantillon des 7 000 femmes aux trois domaines d'étude a montré qu'un échantillon assez faible (moins de 1 000 femmes) a été accordé aux deux domaines urbains, N'Djamena et les autres villes. Effectivement, ces deux domaines ne représentent respectivement qu'environ 9,7 et 13,3 % de la population scolaire. Ces sous-échantillons relativement faibles ne permettaient pas les analyses approfondies que l'on désirait effectuer au niveau de ces deux domaines. L'analyse des autres enquêtes du projet Enquête Démographique et de Santé a montré que, pour obtenir des résultats sur la fécondité et la mortalité avec des marges d'erreur acceptables, il devait y avoir un minimum de 1 000 femmes dans chaque domaine d'étude. On a alors proposé d'affecter un taux de sondage plus élevé ces deux domaines par rapport au domaine rural. Cependant, un taux de sondage homogène a été appliqué à l'intérieur de chaque domaine afin que l'échantillon de chaque domaine soit auto-pondéré.

Pour pouvoir étudier également l'attitude des hommes envers la planification familiale ainsi que leurs pratiques contraceptives et leur connaissance sur le SIDA, l'EDST a aussi interrogé un échantillon d'hommes de 15 à 59 ans dans un sous-échantillon des ménages tirés pour l'enquête des femmes.

BASE DE SONDAGE

Administrativement, le Tchad est divisé en 14 préfectures et la capitale N'Djamena qui, elle aussi, a un statut préfectoral. Le pays comptait 6 279 931 habitants d'après le Premier Recensement Général de la Population et de l'Habitation d'Avril 1993 (RGPH), dont 5,6 % étaient des nomades. L'intérieur de chaque préfecture, on trouve des sous-préfectures qui se composent de cantons.

Le Bureau Central de Recensement (BCR) de la Direction de la Statistique, des études économiques et Démographiques dispose d'un fichier informatique de plus de 6 732 zones de dénombrement (ZD) qui ont été tirées pour les besoins du RGPH.

Pour que ce fichier de ZD puisse servir de base de sondage pour l'EDST, on l'a apuré de telle sorte qu'il réponde aux conditions suivantes :

- 1 - Le fichier ne devait pas inclure les ZD qui ne comptent pas de ménages ordinaires (cas de 12 ZD).
- 2 - Le fichier ne devait pas inclure les ZD qui comptent moins de 10 ménages ordinaires (cas de 9 ZD avec une population totale de 194), ceci pour des raisons pratiques de terrain 2.
- 3 - Pour chaque ZD, le fichier devait inclure le code d'identification du canton qui lui est attaché selon le Manuel de Codification du RGPH. Comme les ZD ont des numéros de façon séquentielle à l'intérieur de chaque canton, le code d'identification du canton était nécessaire pour retrouver la ZD dans les documents cartographiques du RGPH. Dans quelques cas particuliers, les ZD ont des numéros à l'intérieur de la sous-préfecture; le code de canton ne s'appliquait donc pas. On s'est aussi trouvé en présence de cas où une seule ZD était attachée à plusieurs cantons administratifs (et apparaissait donc plusieurs fois dans le fichier) alors que physiquement elle était une seule ZD géographique; on a cherché à grouper ces sous-ZD administratives pour qu'elles apparaissent ensemble dans une seule ZD géographique.
- 4 - Le fichier devait être regroupé par ordre géographique : préfectures et sous-préfectures au sein de chaque préfecture; arrondissements au sein de N'Djamena.

Le fichier apuré devait donc fournir une bonne base de sondage pour l'EDST si on adoptait les règles de sondage suivantes :

- 1 - Au premier degré de sondage, on tirait un certain nombre de ZD avec des probabilités proportionnelles à la taille des ZD, tant donné que les coefficients de variation sont assez élevés.
- 2 - Avant le tirage des ZD, on regroupait les ZD de petite taille avec les ZD voisines sur le terrain.
- 3 - Après le tirage, on scindait les grandes ZD en segments et un seul segment était retenu pour l'EDST. Dans la pratique, le regroupement des ZD pouvait aussi se faire après le tirage : chaque ZD tirée, ayant moins de 40 ménages, serait groupée avec la ZD suivante dans la liste sauf si la ZD tirée était la dernière dans la liste; dans ce dernier cas, on la regrouperait avec celle qui la précède dans la liste. Après avoir regroupé la base par ordre géographique, on pouvait tirer de sorte que les ZD avoisinantes sur la liste étaient aussi avoisinantes sur le terrain.

CARACTÉRISTIQUES GÉNÉRALES DE L'ÉCHANTILLON

L'échantillon de l'EDST est basé sur un sondage aratoire stratifié et tiré à deux degrés. Le tirage a été fait indépendamment à l'intérieur de

chaque domaine. Dans chaque domaine, on a tiré au premier degré un certain nombre de ZD à partir de l'ensemble des ZD dans le fichier apur. On a examiné ensuite les ZD tirés pour voir si un regroupement (de ZD de petite taille) ou une segmentation (d'une ZD de grande taille) était nécessaire. On a trouvé que dans l'ensemble des ZD tirés, il n'existe pas de ZD ayant moins de 40 ménages et il existe une seule ZD qui comptait 407 ménages en 1993. On a décidé de ne pas segmenter cette ZD tant que c'est une ZD urbaine qui n'est pas excessivement grande.

Un dénombrement des ménages dans chacune des ZD tirées a fourni une liste de ménages à partir de laquelle on a tiré, au deuxième degré, un échantillon de ménages. Tous les membres de ces ménages ont été dénombrés à l'aide d'un questionnaire ménage et chaque femme âgée de 15-49 ans.

Une allocation proportionnelle de l'échantillon-cible de 7000 femmes aux trois domaines a donné seulement 682 femmes à N'Djamena et 934 femmes aux autres centres urbains, ce qui n'était pas suffisant pour permettre des estimations fiables dans ces deux domaines. On a donc sur-échantillonné N'Djamena et les autres centres urbains par rapport aux milieux ruraux.

Le nombre de grappes tirées dépend du nombre de femmes enquêtées dans chaque grappe. On entend par grappe l'unité de sondage aérolaire finale retenue pour l'enquête. Ainsi, dans le cadre de l'EDST, la grappe correspond à la ZD. Les analyses menées après d'autres enquêtes analogues indiquent que le nombre optimal de femmes enquêtées par grappe est de l'ordre de 30-35 femmes dans le milieu rural et de 20-25 femmes dans le milieu urbain. Si l'on décide d'enquêter 30 femmes, en moyenne, dans chaque grappe rurale et de 25 femmes, en moyenne, dans chaque grappe urbaine, on aboutirait à un nombre total de 253 grappes. On a proposé d'arrondir le nombre de grappes rurales à 130 pour des raisons budgétaires et logistiques de terrain. Ce qui revenait enquêter en moyenne environ 31 femmes rurales par grappe au lieu de 30 femmes. Le nombre total de grappes tirées a donc été de 250.

Le nombre de ménages tirés pour parvenir à l'échantillon cible de femmes a été calculé de la manière suivante:

$$\text{Nombre de ménages} = \frac{\text{Nombre de femmes } 15-49}{\text{Nombre de femmes } 15-49} \times \text{Nombre de ménages } 15-49 \times \text{Taux de réponse}$$

D'après le RGPH, le nombre de femmes âgées de 15-49 ans par ménage est de 1,09 à N'Djamena et 1,14 dans les autres centres urbains et dans les milieux ruraux. Comme taux de réponse, on a utilisé un taux global de 90%; ceci en supposant que, parmi l'ensemble des ménages tirés pour l'enquête, l'on en trouverait seulement 95% sur le terrain pour des raisons diverses (logement non trouvé, refus de répondre, ménage absent, etc...). On a supposé également un taux de réponse de 95% pour les femmes. Ce qui revenait tirer en moyenne environ 25 ménages dans chaque grappe de N'Djamena, environ 24 ménages dans chaque grappe des autres centres urbains et environ 29 ménages dans chaque grappe rurale.

A cause de la répartition non-proportionnelle de l'échantillon parmi les domaines, des taux de pondération au niveau des domaines ont été nécessaires pour assurer la représentativité actuelle de l'échantillon au niveau national.

Deviations from Sample Design

Trois grappes, habitées par des nomades, avaient pu être dénombrées au cours des opérations de cartographie; cependant, au moment de l'enquête principale, la population de ces grappes s'était déplacée, aucun questionnaire n'a pu y être rempli.

Pour des raisons d'insécurité, cinq villages du canton Signal dans la sous-préfecture Goz-Béda, n'ont pas été recensés.

Response Rate

Au total, 7345 ménages ont été sélectionnés pour l'enquête ménage : 6930 ont été identifiés et parmi ceux-là, 6840 ont pu être enquêtés avec succès, soit un taux de réponse de 98,7% (tableau 1.2). En ce qui concerne les femmes de 15-49 ans, sur les 7705 éligibles pour une enquête individuelle, 7454 ont pu être enquêtées, soit un taux de réponse de 96,7%. Ce taux de réponse est satisfaisant puisqu'il est supérieur à celui proposé dans le plan de sondage (95%). En ce qui concerne les hommes, le taux de réponse de 94,0% est également supérieur à celui prévu par le plan de sondage (90%) pour l'enquête homme.

Questionnaires

Overview

L'Enquête Démographique et de Santé a utilisé 4 types de questionnaires : a) le questionnaire ménage; b) le questionnaire individuel femme; c) le questionnaire individuel homme; et d) le questionnaire communautaire sur la disponibilité des services.

Afin d'atteindre les objectifs de l'enquête, environ 80 expressions et termes relatifs aux parties sensibles des questionnaires (en particulier les questions sur la reproduction, l'activité sexuelle, la contraception et les maladies) ont été traduits en 14 langues parlées au Tchad de façon ce qu'au cours de l'enquête, les enquêtrices traduisent les questions le plus fidèlement possible. Ces lexiques ont été testés et améliorés au cours de la formation et du pré-test avant leur utilisation pour l'enquête principale.

a) Questionnaire ménage

Il permet d'établir la liste de tous les membres du ménage et des visiteurs et de collecter leur sujet un certain nombre d'informations telles que le nom, le lien de parent avec le chef de ménage, la situation de résidence, le sexe, l'âge, le niveau d'instruction. En outre, par le biais du questionnaire ménage, sont collectées quelques caractéristiques des logements devant servir à évaluer les conditions socio-économiques et environnementales dans lesquelles vivent les femmes et les hommes qui seront enquêtés individuellement. Enfin, la page de garde du questionnaire, comprend des informations relatives à la localisation du ménage (Préfecture, Sous-Préfecture, Canton, Village), au nombre de visites effectuées par l'enquêtrice, au résultat de l'interview ainsi qu'une partie réservée au contrôle de terrain et de bureau.

L'objectif principal de ce questionnaire est de permettre l'identification des femmes éligibles (âgées de 15-49 ans) et, dans un tiers des ménages, celle des hommes éligibles (âgés de 15-59 ans). Le questionnaire ménage fournit également les informations permettant d'établir le dénominateur pour le calcul des taux démographiques.

b) Questionnaire individuel femme

Le questionnaire individuel femme constitue le document principal de l'EDST. Il a été basé sur la base du questionnaire Module B du programme DHS (Questionnaire pour les pays à faible prévalence contraceptive). Il comprend une page similaire à celle du questionnaire ménage sur laquelle sont enregistrées les informations d'identification et les résultats des interviews. Les onze sections qui composent le questionnaire femme servent à recueillir des informations sur les différents domaines suivants :

- Caractéristiques socio-démographiques. Cette section porte sur le lieu et la durée de résidence, l'âge et la date de naissance, la scolarisation, l'alphabetisation, la nationalité, la religion, l'éthnie, l'accès aux médias ainsi que sur les caractéristiques des logements des femmes qui sont en visite dans le ménage enquêté.
- Reproduction. Cette section permet de collecter des informations sur les naissances vivantes que la femme a eues durant sa vie ainsi que sur leur état de survie au moment de l'enquête, sur l'état de grossesse au moment de l'enquête, les dates des dernières règles et sur la connaissance de la période fertile au cours du cycle menstruel.
- Contraception. Cette section porte sur la connaissance, spontanée ou non, des diverses méthodes contraceptives, sur leur utilisation ainsi que sur les diverses sources d'approvisionnement. Des questions concernant les raisons de non utilisation de la contraception figurent également dans cette section.
- Grossesse et allaitement. Cette section porte uniquement sur les naissances ayant eu lieu au cours des cinq années précédant l'enquête. Le questionnaire permet d'obtenir des informations sur la période de la grossesse, les soins prénataux y compris la vaccination antitétanique, le lieu d'accouchement et la qualification de la personne ayant assisté la femme pendant l'accouchement, le retour des règles et la reprise des rapports sexuels après la naissance de l'enfant. Concernant l'allaitement, les questions portent sur sa fréquence et sa durée, sur le type d'allaitement (maternel ou artificiel), ainsi que sur l'utilisation des différents compléments nutritionnels.
- Vaccination et santé. Cette section porte également sur les naissances ayant eu lieu au cours des cinq années précédant l'enquête. La section porte sur les vaccinations incluses dans le Programme Élargi de Vaccination (PEV), sur la santé des enfants de moins de cinq ans et, plus particulièrement, sur la prévalence et le traitement de la fièvre, de la toux et de la diarrhée.
- Causes de décès des enfants nés dans les cinq dernières années. Cette section porte sur les causes de décès d'enfants nés vivants au cours des cinq dernières années. Les questions permettent de déterminer quelles sont les principales maladies responsables de la mortalité des enfants de moins de cinq ans dans le pays.
- Mariage. Cette section permet de recueillir des informations sur l'état matrimonial, le régime de mariage (monogamie ou polygamie), l'âge au premier mariage et aux premiers rapports sexuels ainsi que sur l'activité sexuelle.
- Préférences en matière de fœcondité. Cette section recueille des informations sur le désir d'enfants supplémentaires, l'intervalle entre les naissances et l'attitude concernant la taille de la famille.
- Caractéristiques du conjoint et activités économiques de la femme. Dans cette section, les questions portent sur les

caractristiques socioprofessionnelles du conjoint des femmes en union et sur l'activit professionnelle des femmes.

- Sida et autres maladies sexuellement transmissibles. Cette section permet d'obtenir des informations sur la connaissance et la prvalence des maladies sexuellement transmissibles ainsi que sur les modes de transmission et de prvention du sida.

- Mortalit maternelle. Au niveau de cette section, on enregistre des informations sur l'ge et l'tat de survie des frres et sœurs de l'enqute. Pour les sœurs dcées l'ge de 12 ans ou plus, des questions supplmentaires permettent de dterminer si le dcs est en rapport avec la maternit. Des questions supplmentaires sur le nombre d'enfants de la sœur (d, cde ou non) sont aussi posées.

- Taille et poids des mres et des enfants. Cette section est consacrée aux mesures anthropométriques des femmes enquêtes et de leurs enfants gs de moins de cinq ans.

c) Questionnaire individuel homme

Le questionnaire homme qui est une forme allégée du questionnaire individuel femme permet de collecter des informations sur la connaissance et l'utilisation de la contraception par les hommes ainsi que sur leurs opinions en matière de fcondité, de taille de la famille et de planification familiale ainsi que sur les MST et le sida.

d) Questionnaire sur la disponibilit des services

Le questionnaire communautaire a pour objectif de recueillir quelques informations sur les infrastructures socio-économiques (coles, marchés, services de transport, etc.) et sanitaires (hôpitaux, centres de santé communautaire, etc.) disponibles dans chacune des grappes de l'enqute.

DATA COLLECTION NOTES

CARTOGRAPHIE

Les travaux de mise jour de 250 grappes chantillons ont été réalisés par une équipe de 12 agents cartographes. Ces travaux se sont déroulés d'avril à novembre 1996. Ils consistaient spécifiquement à déterminer avec exactitude les limites des grappes, faire leur croquis, indiquer les positions relatives de chaque structure occupée par les ménages et dresser la liste de ces ménages.

ENQUÊTE PILOTE

Les questionnaires et autres instruments de l'enquête (manuels des enquêteurs, des superviseurs, guides de formation, lexiques en langues nationales, etc.) ont été testés dans le cadre d'une pré-enquête dans laquelle ont participé 18 enquêteurs et enquêtrices devenus superviseurs et contreuses dans le cadre de l'enquête principale. Cette pré-enquête a duré une semaine et s'est déroulée sur deux zones de la ville de N'Djamena et une zone rurale. Cette opération a permis d'identifier certaines erreurs dans les questionnaires, certaines imprécisions dans les traductions ainsi que des lacunes dans la formation; partir de ces enseignements, il a été possible de préparer la version finale des questionnaires, des traductions et des Instructions de l'enquête.

FORMATION ET COLLECTE

En novembre 1996, a commencé la formation pour l'enquête principale qui a duré quatre semaines. Outre l'équipe technique du BCR, cette formation a vu l'intervention des différents consultants nationaux et internationaux pour présenter au personnel de collecte un panorama complet de l'état sanitaire du pays et leur expliquer l'importance de l'EDST. L'issue de la formation, huit équipes, chacune composée de trois enquêtrices, d'un enquêteur chargé de l'enquête auprès des hommes, d'une contreuse, d'un chauffeur et d'un chef d'équipe, ont visité les grappes sélectionnées pour procéder à la collecte des informations.

La collecte des données a commencé en décembre 1996 et a pris fin dans le courant du mois de juillet 1997. Toutes les grappes ont pu être visitées. Trois grappes, habitées par des nomades, avaient pu être dénombrées au cours des opérations de cartographie; cependant, au moment de l'enquête principale, la population de ces grappes s'était déplacée, aucun questionnaire n'a pu y être rempli.

Data Processing

Data Editing

La saisie des donnes sur micro-ordinateur a dbut une semaine aprs le dbut de la collecte et a t ralis par dix oprateurs de saisie rpartis en deux groupes. Chacun des deux groupes tait assist d'un contrleur. La supervision technique a t assur par les deux informaticiens du BCR.

Tout au long de la saisie, les donnes ont t dites par un informaticien et un dmographe du BCR. L'dition des donnes a permis de vrifier la cohrence interne des rponses. La vrfication finale a t ralise par un informaticien et un dmographe de Macro International.

Other Processing

Les travaux d'analyse ont t raliss en collaboration avec Macro International. Sur les douze chapitres que comporte le rapport final, huit ont t analys par les cadres nationaux et cinq par les experts de Macro. Un sminaire d'harmonisation d'une dure de sept jours a t organis au Tchad avant la finalisation du rapport final. Le sminaire a regroup d'une part les auteurs des diffrents chapitres (l'exception des experts de Macro) et, d'autre part, les techniciens du Ministre de la Sant Publique. Ce sminaire a permis aux participants de faire des observations sur les diffrents chapitres afin de prparer leur version finale. La version finale des rapports (rapport principal et rapport de synthse) a t ralis au si ge de Macro International par deux cadres du BCR et par deux experts de cette institution.

Data Appraisal

Estimates of Sampling Error

Les erreurs de sondage peuvent tre values statistiquement. Les estimations qui figurent dans ce rapport ont t obtenues partir d'un chantillon de 7 454 femmes ges de 15 49 ans et de 2 320 hommes gs de 15 59 ans. Si l'enqute avait t effectue auprs d'autres enquts, il y a tout lieu de penser que les frquences des rponses auraient t trs peu diffrentes de celles que r on a prsentes. C'est l'incertitude de cette assumption que reflte l'erreur de sondage; celle-ci permet donc de mesurer le degr de variation des rponses suivant l'chantillon.

L'erreur-type (ET) est un indice particulirement utile pour mesurer l'erreur de sondage d'un paramtre (moyenne ou proportion). Elle est estime partir de la variance des rponses dans l'chantillon mme : l'erreur-type est la racine carre de la variance. Cet indice a pour propri t que dans 95 % des chantillons de taille et de caractristique identiques, la valeur relle d'un paramtre pour l'ensemble d'une population se trouve l'intrieur de l'intervalle de 2 ET.

Si l'chantillon des femmes ou des hommes avait t tir d'aprs un plan de sondage alatoire simple, il aurait t possible d'utiliser des formules simples pour calculer les erreurs de sondage. Cependant, l'chantillon de l'EDST tant un chantillon stratifi deux degrs, des formules plus complexes ont t utilises. Le module erreurs de sondage du logiciel ISSA a t utilis pour calculer les erreurs de sondage suivant la mthodologie statistique approprie. Ce module utilise la mthode de linarisation (Taylor) pour des estimations telles que les moyennes ou proportions, et la mthode de Jackknife pour des estimations plus complexes telles que l'indice synthtique de fcondit et les quotients de mortalit.

Les erreurs de sondage pour l'EDST ont t calcules pour certaines des variables les plus intressantes. Les rsultats sont prsents dans une annexe du Rapport Final pour l'ensemble du pays, le milieu urbain, le milieu rural, la capitale Ndjamna, et l'ensemble des autres villes. Pour chaque variable, le type de statistique (moyenne ou proportion) et la population de base sont prsents dans le tableau B.1 du Rapport Final. Les tableaux B.2 B.6 prsentent la valeur de la statistique (M), l'erreur-type (ET), le nombre de cas non-pondrs (N) et pondrs (N'), la racine carre de l'effet du plan de sondage (REPS), l'erreur relative (ET/M), et l'intervalle de confiance 95 % (M+2ET) pour chaque variable. L'effet du plan de sondage (REPS) est non-dfini quand l'cart-type sous l'chantillon alatoire simple est zro (quand l'estimation est proche de 0 ou 1). Dans le cas de l'indice synthtique de fcondit, le nombre de cas non-pondrs n'est pas pertinent, car la valeur non- pondre de femmes-annes d'exposition au risque de grossesse n'est pas connue.

L'intervalle de confiance est interprte de la manire suivante : pour la variable Enfants ns vivants des femmes 15-49 ans, l'EDST a donn un nombre moyen d'enfants ns vivants de 3,505 pour l'ensemble des femmes, auquel correspond une erreur-type de 0,038 enfant. La fourchette dans laquelle se place la moyenne : e 2 ET est donc 3,430 et 3,580. La probabilit que la valeur relle du nombre moyen d'enfants ns vivants des femmes ges de 15 49 ans appartienne cet intervalle est de 95 %.

Les erreurs de sondage ont t produites pour l'chantillon national de femmes et pour deux groupes d'estimations : (1) moyennes et proportions de valeur suprieure ou gale 1%, et (2) taux dmographiques. Les erreurs relatives (ET/M) des moyennes et proportions se situent entre 0,7 % et 11,9 % avec une moyenne de 5 %. Les erreurs relatives les plus leves sont gnralement celles des trs faibles estimations (par exemple, parmi les femmes actuellement en union qui Utilisent la continence priodique). Si on enleve les estimations de trs faible valeur (moins de 10 %), la moyenne tombe 4,2 %. Ainsi, en gnral, les erreurs relatives de la plupart des estimations pour l'ensemble du pays sont faibles, sauf dans le cas de trs faibles proportions. L'erreur relative de l'indice de fcondit est assez faible (1,5 %). Cependant, pour les taux de mortalit, l'erreur relative moyenne est un peu plus lev (5,2 %).

Il existe des diffrences entre les erreurs relatives au niveau des sous-chantillons. Par exemple, pour la variable Enfants ns vivants des femmes ges de 15 49 ans, l'erreur relative pour l'chantillon des femmes est respectivement de 1,1%, 1,8 % et 3 % pour l'ensemble du pays, l'ensemble du milieu urbain et la capitale Ndjamna.

Pour l'chantillon national de femmes, la moyenne de l'effet du plan de sondage (REPS) calcule pour l'ensemble des estimations est de 1,42 ce qui veut dire que, par rapport un chantillon alatoire simple, la variante est multiplie par un facteur de $1,42^2 = 2,01$ parce qu'on utilise un plan de sondage complexe (par grappes et plusieurs degrs).

Other forms of Data Appraisal

Les erreurs de mesure sont les biais imputables la mise en oeuvre de la collecte et de l'exploitation des donnes telles que l'omission de mnages slectionns, la mauvaise interprtation des questions de la part de l'enqutrice ou de l'enqute, ou les erreurs de saisie des donnes. Bien que tout le possible ait t fait pour minimiser ce type d'erreur pendant la mise en oeuvre de l'EDST, il est difficile d'viter et d'valuer toutes les erreurs de mesure.

Questionnaires

Questionnaire Ménage

Title	Questionnaire Ménage
Author(s)	Bureau Central du Recensement (BCR), Direction de la Statistique, des Études Économiques et Démographiques (DSEED) , Ministère du Plan et de l'Aménagement du Territoire
Date	1996-12-01
Country	Chad
Language	French
Contributor(s)	Macro International Inc.
Description	<p>Le questionnaire ménage permet d'établir la liste de tous les membres du ménage et des visiteurs et de collecter à leur sujet un certain nombre d'informations telles que le nom, le lien de parenté avec le chef de ménage, la situation de résidence, le sexe, l'âge, le niveau d'instruction. En outre, par le biais du questionnaire ménage, sont collectées quelques caractéristiques des logements devant servir à évaluer les conditions socio-économiques et environnementales dans lesquelles vivent les femmes et les hommes qui seront enquêtés individuellement. Enfin, la page de garde du questionnaire, comprend des informations relatives à la localisation du ménage (Préfecture, Sous-Préfecture, Canton, Village), au nombre de visites effectuées par l'enquêtrice, au résultat de l'interview ainsi qu'une partie réservée au contrôle de terrain et de bureau. L'objectif principal de ce questionnaire est de permettre l'identification des femmes éligibles (âgées de 15-49 ans) et, dans un tiers des ménages, celle des hommes éligibles (âgés de 15-59 ans). Le questionnaire ménage fournit également les informations permettant d'établir le dénominateur pour le calcul des taux démographiques.</p>

Questionnaire Femme

Title	Questionnaire Femme
Author(s)	Bureau Central du Recensement (BCR), Direction de la Statistique, des Études Économiques et Démographiques (DSEED) , Ministère du Plan et de l'Aménagement du Territoire
Date	1996-12-01
Country	Chad
Language	French
Contributor(s)	Macro International Inc.

Questionnaire individuel femme constitue le document principal de l'EDST. Il a été élaboré sur la base du questionnaire Modèle B du programme DHS (Questionnaire pour les pays à faible prévalence contraceptive). Il comprend une page similaire à celle du questionnaire ménage sur laquelle sont enregistrés les informations d'identification et les résultats des interviews. Les onze sections qui composent le questionnaire femme servent à recueillir des informations sur les différents domaines suivants :

- Caractéristiques socio-démographiques. Cette section porte sur le lieu et la durée de résidence, l'âge et la date de naissance, la scolarisation, l'alphabétisation, la nationalité, la religion, l'ethnie, l'accès aux média ainsi que sur les caractéristiques des logements des femmes qui sont en visite dans le ménage enquêté.
- Reproduction. Cette section permet de collecter des informations sur les naissances vivantes que la femme a eues durant sa vie ainsi que sur leur état de survie au moment de l'enquête, sur l'état de grossesse au moment de l'enquête, les dates des dernières règles et sur la connaissance de la période féconde au cours du cycle menstruel.
- Contraception. Cette section porte sur la connaissance, spontanée ou non, des diverses méthodes contraceptives, sur leur utilisation ainsi que sur les diverses sources d'approvisionnement. Des questions concernant les raisons de non utilisation de la contraception figurent également dans cette section.
- Grossesse et allaitement. Cette section porte uniquement sur les naissances ayant eu lieu au cours des cinq années précédant l'enquête. Le questionnaire permet d'obtenir des informations sur la période de la grossesse, les soins prénatals y compris la vaccination antitétanique, le lieu d'accouchement et la qualification de la personne ayant assisté la femme pendant l'accouchement, le retour des règles et la reprise des rapports sexuels après la naissance de l'enfant. Concernant l'allaitement, les questions portent sur sa fréquence et sa durée, sur le type d'allaitement (maternel ou artificiel), ainsi que sur l'utilisation des différents compléments nutritionnels.
- Vaccination et santé. Cette section porte également sur les naissances ayant eu lieu au cours des cinq années précédant l'enquête. La section porte sur les vaccinations incluses dans le Programme Elargi de Vaccination (PEV), sur la santé des enfants de moins de cinq ans et, plus particulièrement, sur la prévalence et le traitement de la fièvre, de la toux et de la diarrhée.
- Causes de décès des enfants nés dans les cinq dernières années. Cette section porte sur les causes de décès d'enfants nés vivants au cours des cinq dernières années. Les questions permettent de déterminer quelles sont les principales maladies responsables de la mortalité des enfants de moins de cinq ans dans le pays.
- Mariage. Cette section permet de recueillir des informations sur l'état matrimonial, le régime de mariage (monogamie ou polygamie), l'âge au premier mariage et aux premiers rapports sexuels ainsi que sur l'activité sexuelle.
- Préférences en matière de fécondité. Cette section recueille des informations sur le désir d'enfants supplémentaires, l'intervalle entre les naissances et l'attitude concernant la taille de la famille.
- Caractéristiques du conjoint et activités économiques de la femme. Dans cette section, les questions posées portent sur les caractéristiques socioprofessionnelles du conjoint des femmes en union et sur l'activité professionnelle des femmes.
- Sida et autres maladies sexuellement transmissibles. Cette section permet d'obtenir des informations sur la connaissance et la prévalence des maladies sexuellement transmissibles ainsi que sur les modes de transmission et de prévention du sida.
- Mortalité maternelle. Au niveau de cette section, on enregistre des informations sur l'âge et l'état de survie des frères et soeurs de l'enquêtée. Pour les sœurs décédées à l'âge de 12 ans ou plus, des questions supplémentaires permettent de déterminer si le décès est en rapport avec la maternité. Des questions supplémentaires sur le nombre d'enfants de la sœur (décédée ou non) sont aussi posées.
- Taille et poids des mères et des enfants. Cette section est consacrée aux mesures anthropométriques des femmes enquêtées et de leurs enfants âgés de moins de cinq ans.

Description	Ce rapport présente les principaux résultats de l'Enquête Démographique et de Santé (EDST) réalisée au Tchad en 1996-1997 par le Bureau Central du Recensement (BCR), Direction de la Statistique, des Études Économiques et Démographiques (DSEED). L'EDST a été financée par le Gouvernement Tchadien, grâce à ses propres ressources et par un crédit auprès de la Banque Mondiale, par le FNUAP et l'UNICEF, et elle a bénéficié de l'assistance technique de Macro International Inc. L'EDST fait partie du programme mondial des Enquêtes Démographiques et de Santé (Demographic and Health Surveys-DHS) dont l'objectif est de collecter, analyser et diffuser des données démographiques portant en particulier sur la fécondité, la planification familiale et la santé de la mère et de l'enfant.
