Sampling

Sampling Procedure

The pure random sample was drawn following the Census Data, adjusted according to Research Surveys' statistics department. The unit of analysis is the household. A single respondent was selected per household. Although the first level of stratification was drawn on race and dwelling, within a predominant racial suburb, individual households that were selected might not be part of that race. If, however, a household was chosen, or a respondent within a household, that was not of the same predominant race of the strata, the respondent was not replaced. This would allow for the mixed suburb representation that is common in South Africa today.

Questionnaires

Overview

The PSS contain about 100 questions - some common to all respondents, and some to specific worker or social groups. A set of core questions are asked in all the PSS. In addition there are questions about specific issues that are important in the context of the country and/or the socio economic group that the PSS targets. The questionnaires are divided into sections by the seven types of securities that the IFP/SES monitors (except three Latin American surveys).

In addition, there are sections on:

- Background characteristics - these refer to a respondent's age, marital status and household characteristics.
- Basic security - Basic security is analysed in these surveys in terms of access to adequate food, health care, shelter and access to water.
- Social justice - these set of questions explore people's sense of social justice since these perceptions are closely linked to the sense of anxiety and distributive justice that underlies insecurity.

Here are sections of the questionnaire:

Section A of the questionnaire is the household roster, providing data on household members

Section B of the questionnaire collects data on basic security of households, including security related to food, clothing, health and the financial resources of the household.

Section C of the questionnaire collects data on Labour market security

Section D of the questionnaire collects data on Employment security

Section E of the questionnaire collects data on Job security

Section F of the questionnaire collects data on Skill security

Section G of the questionnaire collects data on Work security

Section H of the questionnaire collects data on Income security

Section I of the questionnaire collects data on Representation security

Section J of the questionnaire collects data on Social justice
