Sampling Procedure

Sampling Design

The South African Social Attitudes Survey has been designed to yield a representative sample of adults aged 16 and older. The sampling frame for the survey is the Human Sciences Research Council's (HSRC) Master Sample, which was designed in 2002 and consists of 1 000 primary sampling units (PSUs). The 2001 population census enumerator areas (EAs) were used as PSUs. These PSUs were drawn, with probability proportional to size, from a pre-census 2001 list of EAs provided by Statistics South Africa.

The Master Sample excludes special institutions (such as hospitals, military camps, old age homes, school and university hostels), recreational areas, industrial areas and vacant EAs. It therefore focuses on dwelling units or visiting points as secondary sampling units, which have been defined as 'separate (non-vacant) residential stands, addresses, structures, flats, homesteads, etc.'.

As the basis of the 2005 SASAS round of interviewing, a sub-sample of 500 PSUs was drawn from the HSRC's Master Sample. Three explicit stratification variables were used, namely province, geographic type and majority population group.

Within each stratum, the allocated number of PSUs was drawn using proportional to size probability sampling. In each of these drawn PSUs, two clusters of 7 dwelling units each were drawn. These 14 dwelling units in each drawn PSU were systematically grouped into two subsamples of seven, to give the two SASAS samples.

Number of units: Questionnaire 1: 2 497 cases realised from 3 500 addresses; questionnaire 2: 2 483 cases realised from 3 500 addresses; combined : 4980 cases

Weighting

Data for the combined dataset is available with the individual weight (for analysis at individual level) as well as household weight (when analysis are done at household level).

The data were weighted to take account of the fact that not all the units covered in the survey had the same probability of selection. The weighting reflected the relative selection probabilities of the individual at the three main stages of selection: visiting point (address), household and individual.

Visiting points in the Northern Cape and KwaZulu-Natal were oversampled, because of the small population size in the former and a desire to ensure a large enough Indian/Asian sample in the latter. Because of this, weights had to be applied to compensate for the greater probability of being selected.

The resulting weight is called 'benchwgt' in the half samples and 'combiwgt' in the full sample. The sample is weighted to represent the South African population 16 years and older. Analysis should be done on weighted data.

Questionnaires

Overview

To accommodate the wide variety of topics that was included in the 2005 survey, two questionnaires were administered simultaneously. Apart from the standard set of demographic and background variables, each version of the questionnaire contained a harmonised core module that remains constant from round to round, with the aim of monitoring change and continuity in a variety of socio-economic and socio-political variables. In addition, a number of themes are accommodated on a rotational basis. This rotating element of the survey consists of two or more topic-specific modules in each round of interviewing and is directed at measuring a range of policy and academic concerns and issues that require more detailed examination at a specific point in time than the multi-topic core module would permit.

Questions for the core module were asked of both samples (3 500 respondents each – 7 000) of which 5 734 realised.

The ISSP module:

The International Social Survey Programme (ISSP) is run by a group of research organisations, each of which undertakes to field annually an agreed module of questions on a chosen topic area. SASAS 2003 represents the formalisation of South Africa's inclusion in the ISSP, the intention being to include the module in one of the SASAS questionnaires in each round of interviewing. Each module is chosen for repetition at intervals to allow comparisons both between countries (membership currently stands at 45) and over time. In 2005, the chosen subject was work orientation, and the module was carried in version 2 of the questionnaire (Qs.98-169).

The standard questionnaires dealt with democracy, identity, public services, social values, crime, voting, demographics, families and family authority

The rotating modules in the 2005 survey covered:

Questionnaire 1: Poverty and social exclusion, family life

Questionnaire 2: ISSP module (work orientation), soccer World Cup, democracy part 2
