1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report only covers labour market activities of persons aged 15 to 64 years.

This report presents the key findings of the QLFS conducted from October to December 2012 (Q4: 2012).

2. Highlights of the results

Table A: Key labour market indicators

	Oct-Dec 2011	Jul-Sep 2012	Oct-Dec 2012	Qrt to Qrt change	Year on year change	Qrt to Qrt change	Year on year change
	Thousand				Thousand		
Population aged 15–64 yrs	32 670	33 018	33 128	110	458	0,3	1,4
Labour force	17 741	18 313	18 078	-235	337	-1,3	1,9
Employed	13 497	13 645	13 577	-68	80	-0,5	0,6
Formal sector (non-agricultural)	9 616	9 663	9 611	-52	-5	-0,5	-0,1
Informal sector (non-agricultural)	2 134	2 197	2 205	8	71	0,4	3,3
Agriculture	630	661	685	24	55	3,6	8,7
Private households	1 118	1 124	1 076	-48	-42	-4,3	-3,8
Unemployed	4 244	4 667	4 501	-166	257	-3,6	6,1
Not economically active	14 929	14 705	15 050	345	121	2,3	0,8
Discouraged work-seekers	2 315	2 170	2 257	87	-58	4,0	-2,5
Other (not economically active)	12 614	12 535	12 794	259	180	2,1	1,4
Rates (%)							
Unemployment rate	23,9	25,5	24,9	-0,6	1,0		
Employed/population ratio (absorption)	41,3	41,3	41,0	-0,3	-0,3		
Labour force participation rate	54,3	55,5	54,6	-0,9	0,3		

Due to rounding, numbers do not necessarily add up to totals.

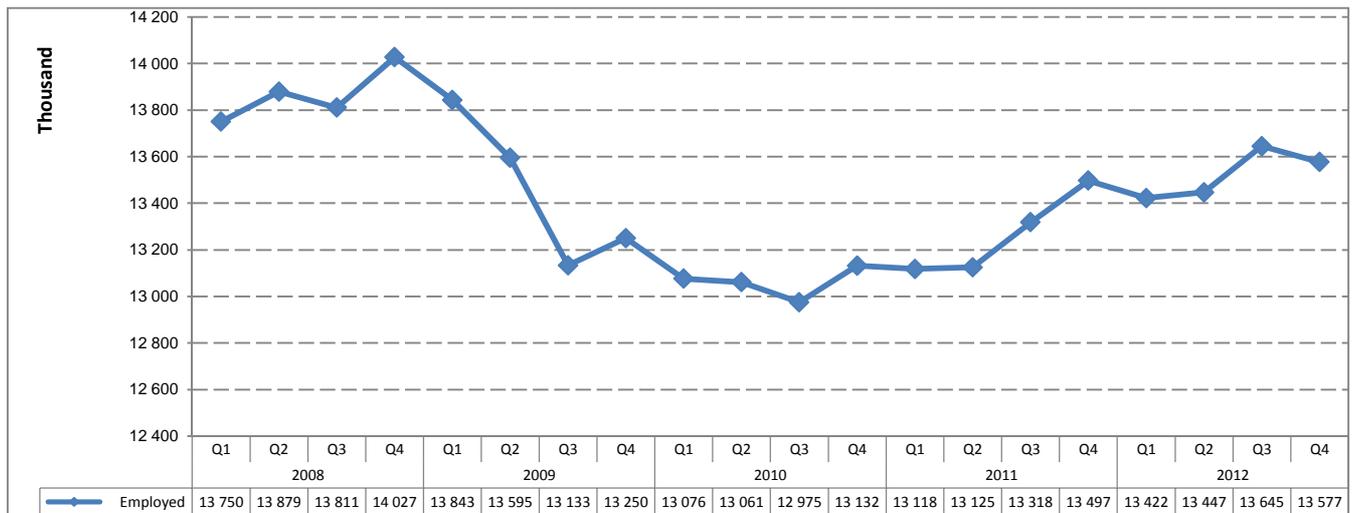

The labour force decreased by 235 000 persons between Q3: 2012 and Q4: 2012. This decrease was reflected in a decrease in the number of both unemployed persons (166 000) and employed persons (68 000), which saw the unemployment rate decline by 0,6 of a percentage point from 25,5% to 24,9% in Q4: 2012. It is the first time since the inception of the QLFS that there is a decrease in employment in the 4th quarter of a year.

A decrease in employment was attributable to job losses experienced in the formal sector (down by 52 000) and Private households (down by 8 000). Employment in agriculture and in the informal sector increased by 24 000 (3,6%) and 8 000 (0,4%) respectively. The number of discouraged work-seekers increased by 87 000 between Q3:2012 and Q4:2012, while other not economically active persons increased by 259 000.

Compared to a year ago, in Q4: 2012, employment increased by 0,6% (80 000), unemployment increased by 6,1% (257 000), the number of discouraged work-seekers decreased by 2,5% (58 000) and other (not economically active) increased by 1,4% (180 000), resulting in a net increase of 121 000 in the not economically active population.

3. Employment

Figure 1: Total employment, quarter 1:2008to quarter 4:2012

Since 2008 there has been a rise in employment during the fourth quarter of every year, followed by a decline in the subsequent quarter with the exception of Q4:2012. Since Q3:2010, employment levels have steadily risen from 12,9 million to 13,5 million in Q4:2012, with annual increases of 365 000 and 80 000 for the years ending Q4:2011 and Q4:2012 respectively. The highest employment levels were observed in Q3:2012 and Q4:2012 since Q2:2009.

Figure 2: Quarter-to-quarter change in employment, quarter 1:2008 to quarter 4:2012

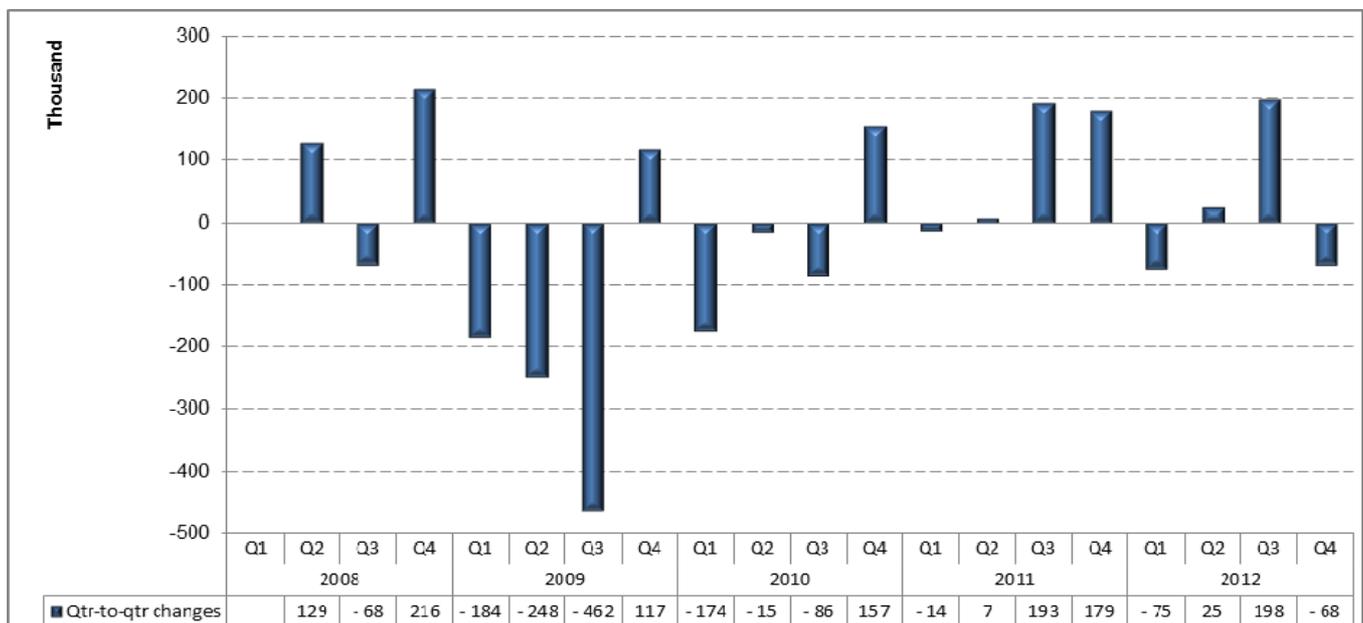

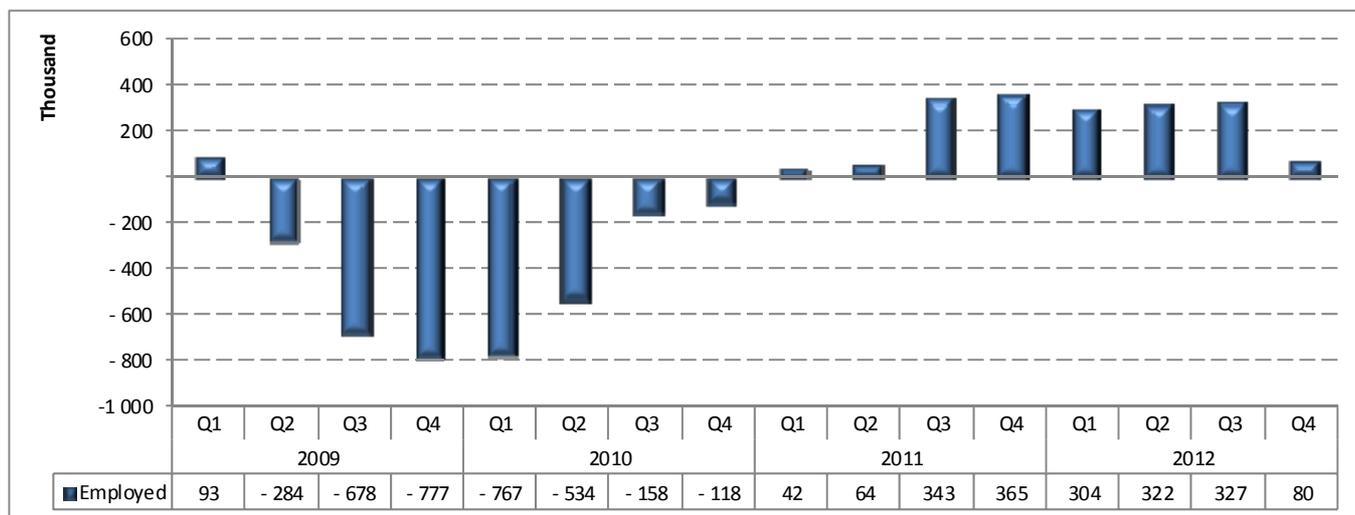

Figure 2 shows that after three successive quarters of increases in employment, employment declined by 75 000 in Q1:2012. Further employment gains of 25 000 and 198 000 were observed in Q2:2012 and Q3:2012 respectively, followed by job losses of 68 000 in Q4:2012.

Figure 3: Year-on-year change in employment, quarter 1:2008 to quarter 4:2012

South Africa has experienced weak employment growth over the past year, with annual employment growing by 80 000 (or 0,6%), following a growth of 327 000 (or 2,5%) in the year ended September 2012. Total employment has grown for eight consecutive quarters on an annual basis since Q1:2011.

Table B: Employment by industry

Industry	Oct-Dec 2011	Jul-Sep 2012	Oct-Dec 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
Total*	13 497	13 645	13 577	-68	80	-0,5	0,6
Agriculture	630	661	685	24	55	3,6	8,7
Mining [#]	327	349	357	8	30	2,3	9,2
Manufacturing	1 789	1 727	1 730	3	-59	0,2	-3,3
Utilities	81	105	98	-7	17	-6,7	21,0
Construction	1 057	1 046	1 061	15	4	1,4	0,4
Trade	3 060	2 962	2 921	-41	-139	-1,4	-4,5
Transport	788	834	816	-18	28	-2,2	3,6
Finance and other business services	1 739	1 811	1 804	-7	65	-0,4	3,7
Community and social services	2 902	3 025	3 028	3	126	0,1	4,3
Private households	1 118	1 124	1 076	-48	-42	-4,3	-3,8

Note: Total includes other industry.

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.

For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

*Due to rounding, numbers do not necessarily add up to totals.

Table B indicates that between Q3:2012 and Q4:2012, the decline in total employment was mainly driven by the decrease in the number of employed persons in Private households (48 000), Trade (41 000) and Transport (18 000) industries, while employment gains were observed in Agriculture (24 000), Construction (15 000) and Mining (8 000).

Compared to the same period last year, employment increased by 80 000 jobs, with Community and social services, Finance and other business services and Agriculture, contributing 126 000, 65 000 and 55 000 jobs respectively. Job losses of 139 000, 59 000 and 42 000 were observed in Trade, Manufacturing and Private Households industries respectively between Q4:2011 and Q4:2012.

Table C: Employment by province

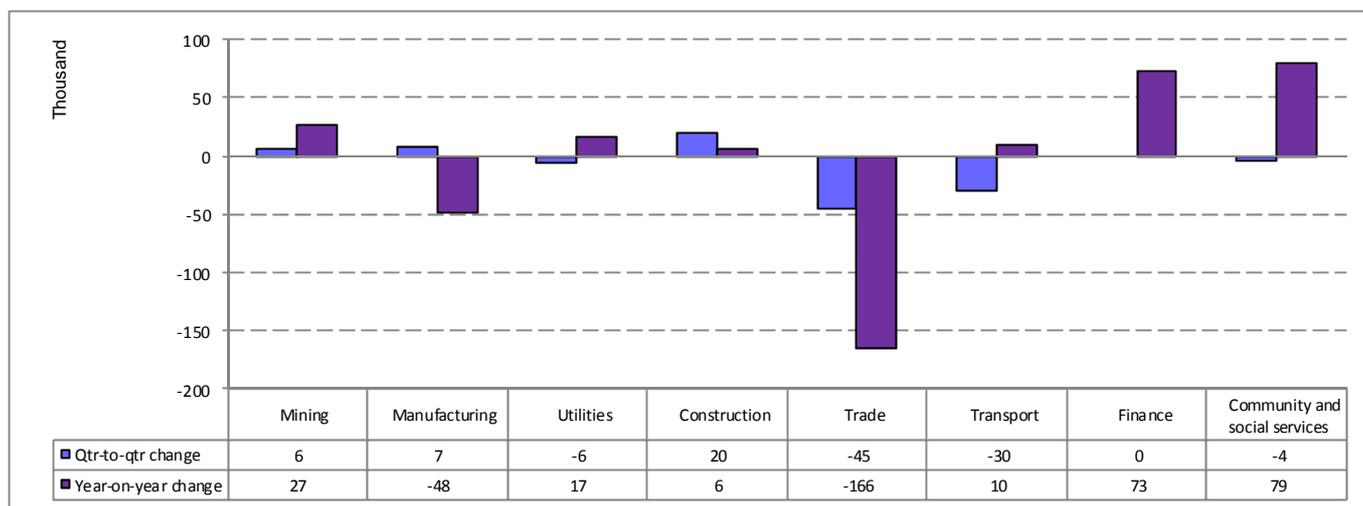

Province	Oct-Dec 2011	Jul-Sep 2012	Oct-Dec 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
South Africa	13 497	13 645	13 577	-68	80	-0,5	0,6
Western Cape	1 842	1 806	1 824	18	-18	1,0	-1,0
Eastern Cape	1 326	1 330	1 261	-69	-65	-5,2	-4,9
Northern Cape	291	290	292	2	1	0,7	0,3
Free State	753	736	732	-4	-21	-0,5	-2,8
KwaZulu-Natal	2 562	2 533	2 493	-40	-69	-1,6	-2,7
North West	700	745	747	2	47	0,3	6,7
Gauteng	4 115	4 194	4 178	-16	63	-0,4	1,5
Mpumalanga	923	928	959	31	36	3,3	3,9
Limpopo	985	1 084	1 092	8	107	0,7	10,9

*Due to rounding, numbers do not necessarily add up to totals.

Table C shows that between Q3:2012 and Q4:2012, there were job losses in four of the nine provinces, with the largest declines observed in Eastern Cape (69 000), KwaZulu-Natal (40 000) and Gauteng (16 000). There were employment gains in Mpumalanga (31 000), Western Cape (18 000) and Limpopo (8 000) over the same period.

Compared to the year ended December 2011, employment increased in five of the nine provinces, with Limpopo (107 000), Gauteng (63 000) and North West (47 000) being the biggest contributors, while job losses were observed in KwaZulu-Natal (69 000), Eastern Cape (65 000) and Free State (21 000).

Figure 4: Changes in the formal sector employment by industry

#Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

In Q4:2012, formal sector employment accounted for 70,8% of total employment, which remained unchanged from the previous quarter. Between Q3:2012 and Q4:2012, employment in the formal sector declined by 52 000, the majority of the job gains being in the Construction (20 000), Manufacturing (7 000) and Mining (6 000) industries.

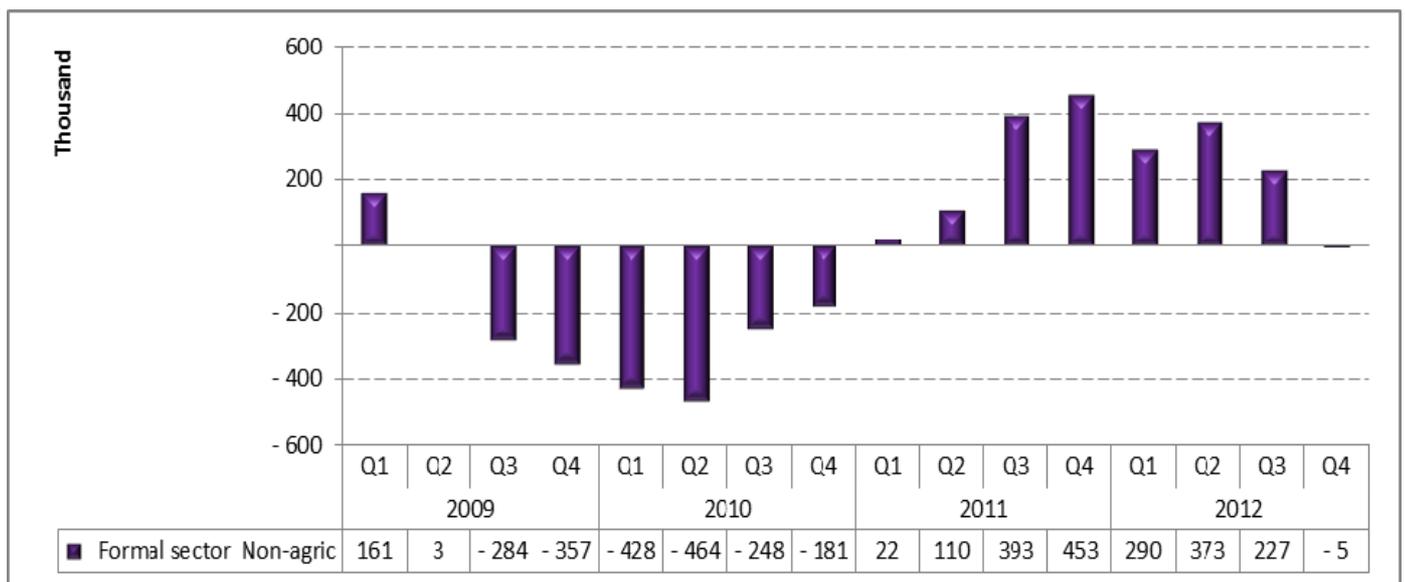

Compared to the same period last year, employment gains were recorded in six of the eight industries, in particular the Community and social services (79 000), Finance and other business services (73 000) and Mining (27 000) industries.

Figure 5: Quarter-to-quarter changes in the formal sector employment

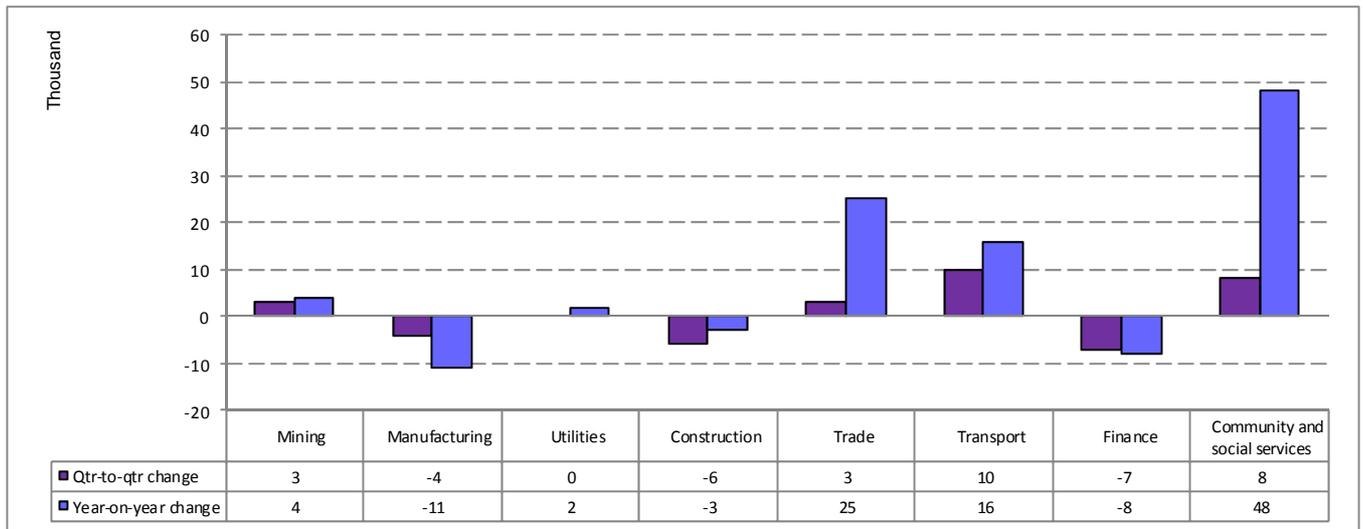

Following two consecutive quarters of employment gains, the formal sector shed 52 000 jobs in Q4:2012 compared to Q3:2012.

Figure 6: Year-on-year changes in the formal sector employment

The annual change in the number of persons employed in the formal sector has been rising since Q1:2011 to Q3:2012. Compared to a year ago, formal sector employment remained virtually unchanged in Q4:2012, (a slight decline of 5 000 jobs).

Figure 7: Changes in the informal sector employment by industry

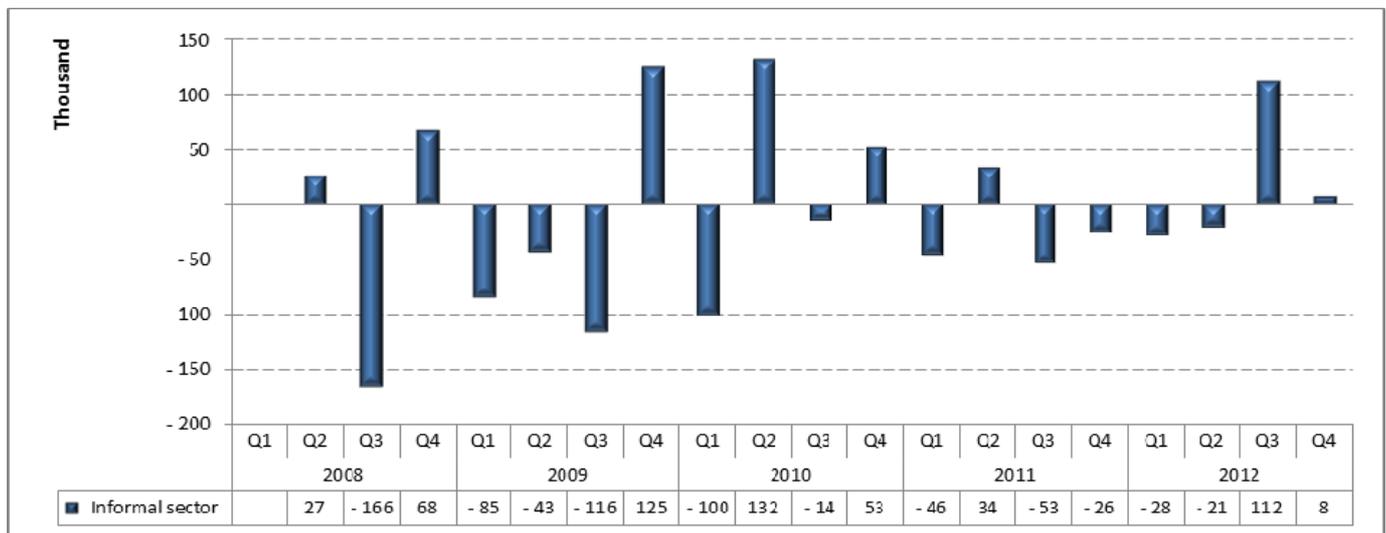

#Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

Informal sector employment increased by 8 000 jobs between Q3:2012 and Q4:2012. Figure 7 indicates that the majority of jobs in the sector were created in Transport (10 000), and Community and social services (8 000), while job losses were mainly observed in Finance and other business services (7 000) and Construction (6 000).

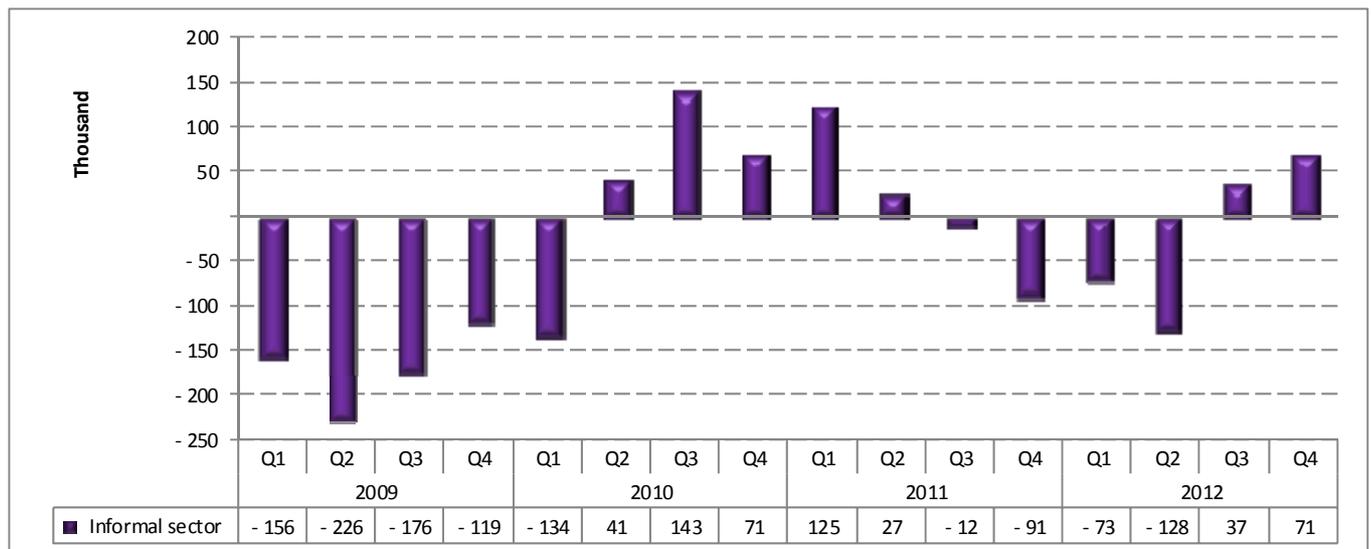

Compared to Q4:2011, the informal sector created 71 000 more jobs in Q4:2012. Community and social service, Trade and Transport are the industries with robust employment gains, contributing 48 000, 25 000 and 16 000 jobs respectively.

Figure 8: Quarter-to-quarter changes in the informal sector employment

Informal sector employment increased by 8 000 (0,4%) jobs between Q3:2012 and Q4:2012, this increase follows 112 000 (5,4%) quarter-to-quarter increase in the previous quarter.

Figure 9: Year-on-year changes in the informal sector employment

Informal sector jobs had contracted for four successive quarters, year-on-year, since Q3:2011. However, 37 000 more jobs were created in Q3:2012 and 71 000 jobs in Q4:2012 compared to the same quarters in the previous year.

Table D: Employment by occupation

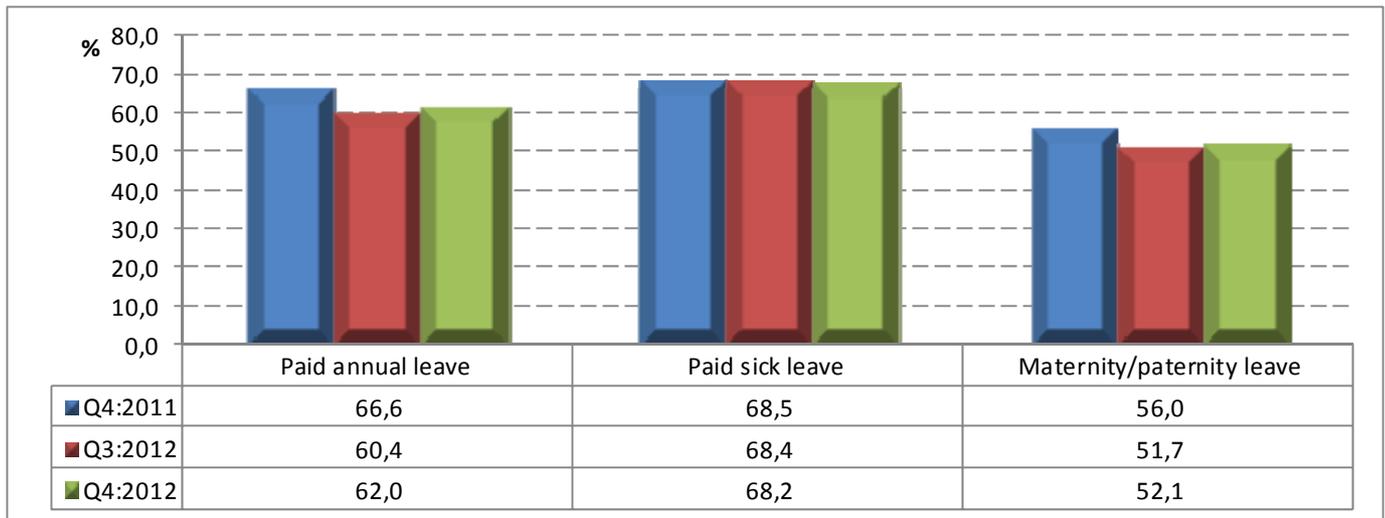

Occupation	Oct-Dec 2011	Jul-Sep 2012	Oct-Dec 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
Total	13 497	13 645	13 577	-68	80	-0,5	0,6
Manager	1 130	1 135	1 075	-60	-55	-5,3	-4,9
Professional	745	798	805	7	60	0,9	8,1
Technician	1 498	1 523	1 503	-20	5	-1,3	0,3
Clerk	1 523	1 390	1 443	53	-80	3,8	-5,3
Sales and services	1 960	2 062	1 996	-66	36	-3,2	1,8
Skilled agriculture	67	67	60	-7	-7	-10,4	-10,4
Craft and related trade	1 637	1 662	1 660	-2	23	-0,1	1,4
Plant and machine operator	1 126	1 150	1 139	-11	13	-1,0	1,2
Elementary	2 933	2 982	3 034	52	101	1,7	3,4
Domestic worker	878	876	861	-15	-17	-1,7	-1,9

*Due to rounding, numbers do not necessarily add up to totals.

Elementary occupations account for the largest share of total employment at 22,3%. The number of persons employed in Elementary occupations increased by 52 000 in Q4:2012. The biggest decline in employment by occupational category was observed in Sales and services (66 000), followed by Managerial (60 000) and Technical (20 000) occupations. Increases in employment were observed in Clerical (53 000), Elementary (52 000) and Professional (7 000) occupations in Q4:2012.

Compared to a year ago, job creation was concentrated in Elementary (101 000), Professional (60 000) and Sales and services (36 000) occupations. There was a decline in the number of persons employed in Clerical (80 000), Managerial (55 000) and Domestic work (17 000) occupations.

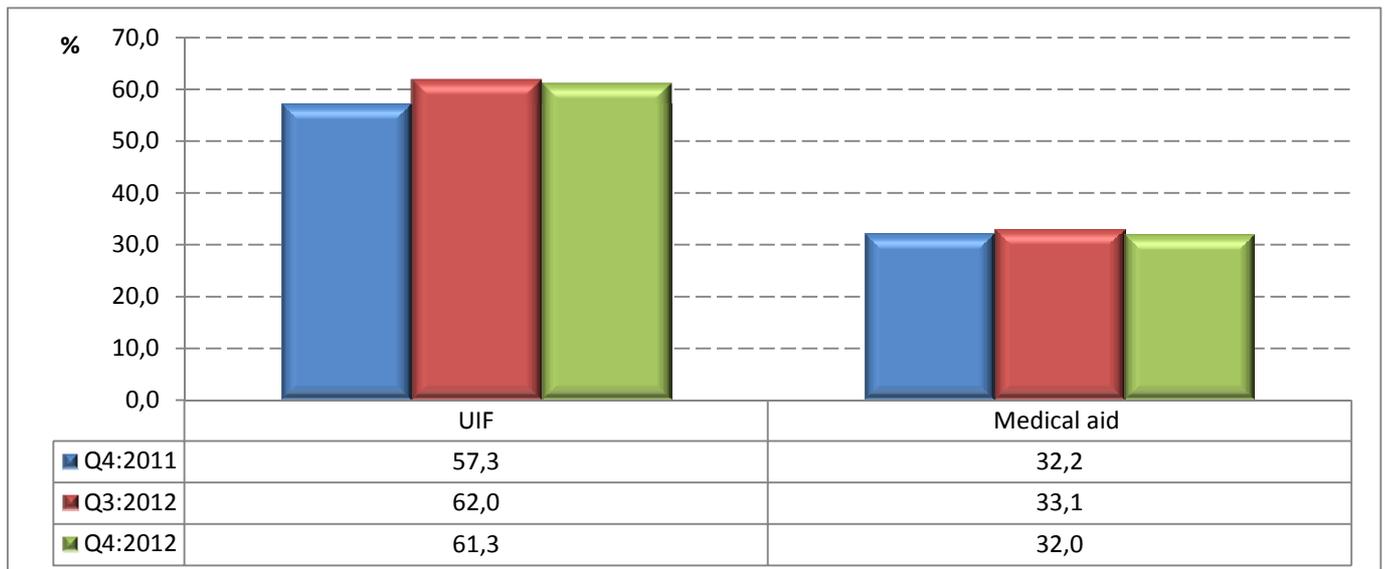

Figure 10: Employee access to selected leave benefits

Between Q3:2012 and Q4:2012, the proportion of employees with access to paid annual leave and maternity leave increased, while paid sick leave benefit declined. Entitlement to paid sick leave benefit was the most available benefit offered by employers, with paid sick leave available to 68,2% of employees in Q4:2012, 0,2 of a percentage point decline from the previous quarter. The proportion of employees with paid annual (vacation) leave increased from 60,4% in Q3:2012 to 62,0% in Q4:2012; while a slight increase (0,4 of a percentage point) was observed in the proportion of employees with maternity/paternity leave benefit.

Compared to the same quarter in 2011, the proportion of employees with access to selected leave benefits declined. Proportion of employees with paid sick leave benefit declined marginally by 0,3 of a percentage points, while paid annual leave benefit and maternity leave benefit increased by 4,6 and 3,9 percentage points respectively.

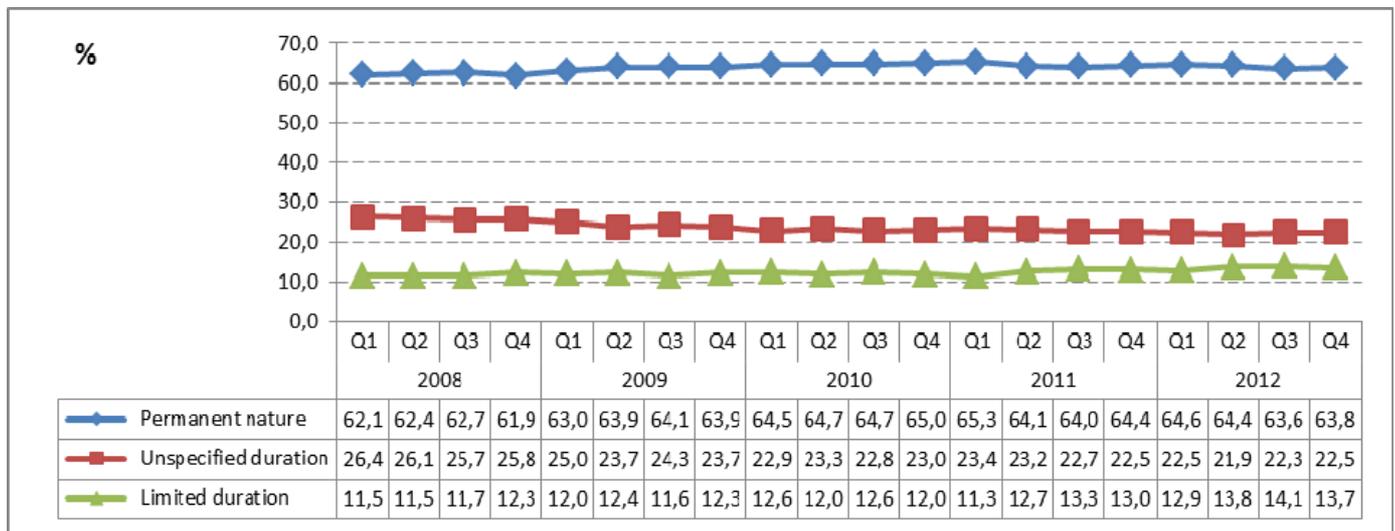

Figure 11: Employee access to other benefits

About three fifths of the employees indicated that their employers paid Unemployment Insurance Fund (UIF) contributions on their behalf, while about a third of employees were entitled to medical aid benefits from their employers. Between Q3:2012 and Q4:2012, there was a decrease of 0,7 of a percentage point in the proportion of employees for whom their employers paid UIF, while medical aid benefit coverage decreased by 1,1 percentage points.

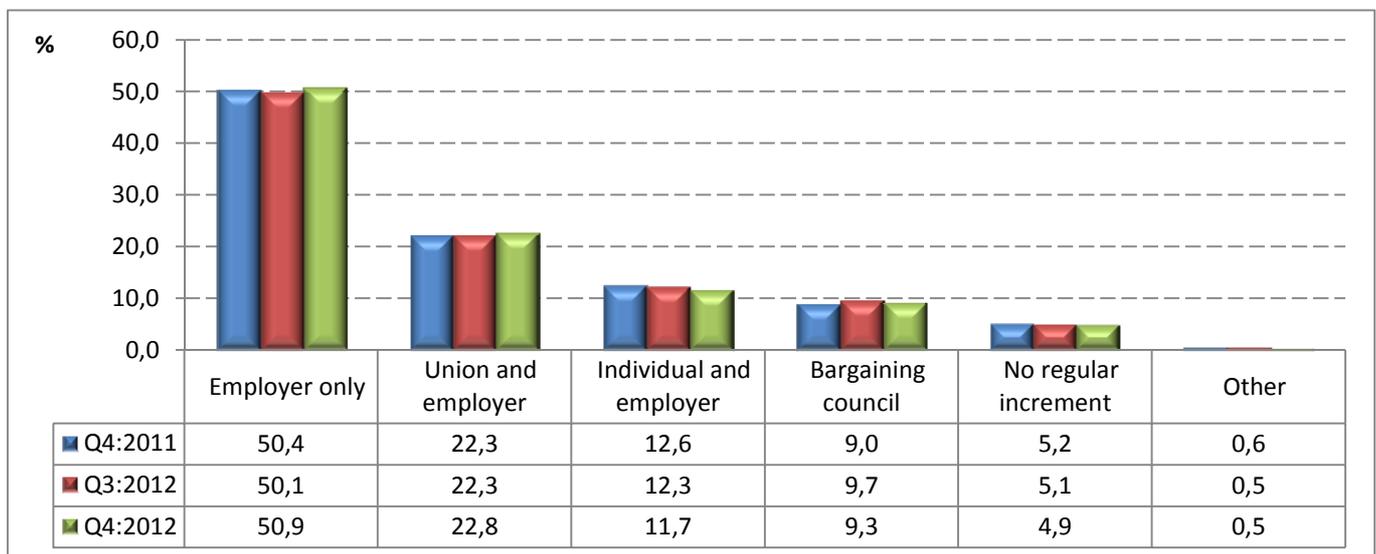

Compared to a year ago, improvements were observed in the proportion of employees whose employers paid UIF for them (up by 4,0 percentage points), while those with medical benefit saw an increase of only 0,2 of a percentage point.

Figure 12: Nature of employment contract or agreement, quarter 1:2008 to quarter 4:2012

Since Q1:2008, more than 60,0% of the employees had a permanent contract/agreement with their employer, while more than 11,0% had a contract of a limited duration with their employer. Between Q1:2008 and Q4:2012, employees with a permanent contract/agreement with their employer had increased by 1,7 percentage points, while those with a limited duration contract increased by 2,2 percentage points.

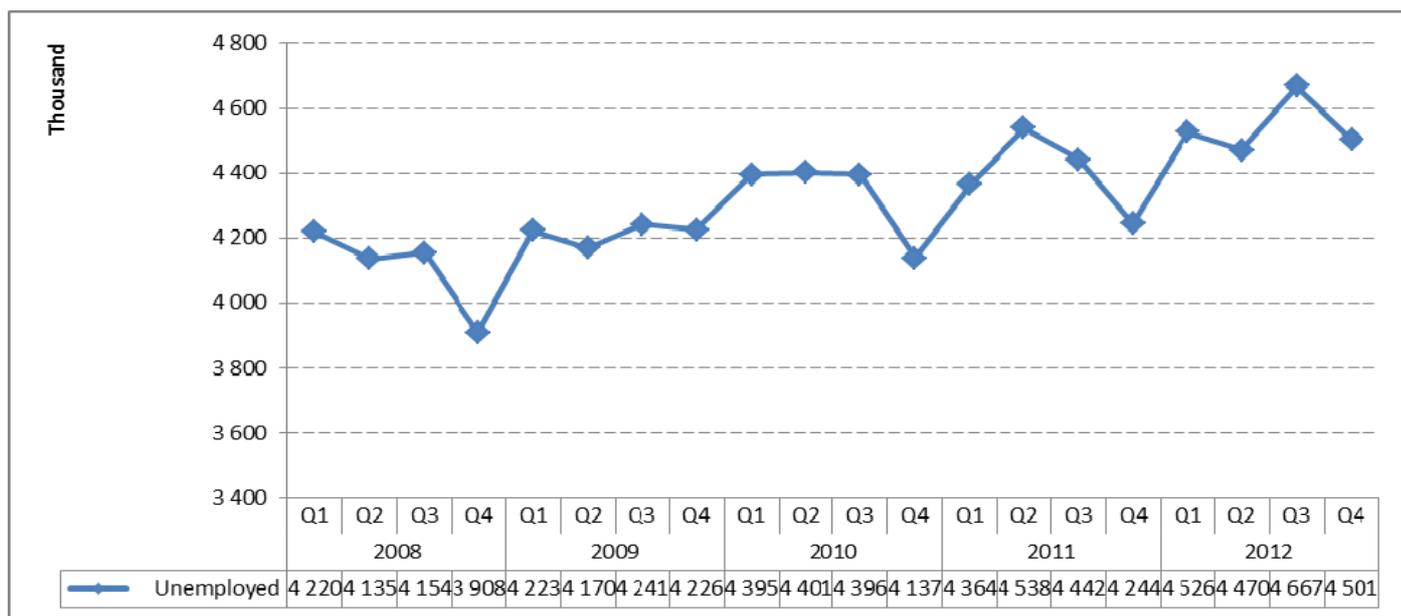

Figure 13: How annual salary increment is negotiated

Approximately 95% of employees have a regular salary increase, though a large proportion (50,9%) indicated that their annual salary increases are determined by the employer only. While the union negotiates salary increment for 22,8% of employees, 11,7% of employees negotiate for themselves and for 9,3% of employees negotiations are made by the bargaining council.

4. The unemployed population

Figure 14: Total unemployment, quarter 1:2008 to quarter 4:2012

In Q4:2008, there were approximately 3,9 million persons unemployed in South Africa, the lowest number since Q1:2008. During the financial and economic crisis, the level of unemployment climbed rapidly, reaching a peak of 4,4 million in Q2:2010, and remaining around this level in the following quarter. The number of unemployed persons rose to 4,6 million in Q3:2012 and decreased by 166 000 (or 3,6%) to 4,5 million in Q4:2012.

Table E: The unemployed by sex

	Oct-Dec 2011	Jul-Sep 2012	Oct-Dec 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
Unemployed	Thousand			Per cent			
Total*	4 244	4 667	4 501	-166	257	-3,6	6,1
Women	2 129	2 331	2 279	-52	150	-2,2	7,0
Men	2 115	2 336	2 222	-114	107	-4,9	5,1

*Due to rounding, numbers do not necessarily add up to totals.

Unemployment decreased by 166 000 (or 3,2%) persons between Q3:2012 and Q4:2012. This decline reflected a drop in both the number of unemployed men (114 000) and unemployed women (52 000).

Year-on-year, the number of unemployed women increased by 150 000 (or 7,0%), while the number of unemployed men increased by 107 000 (or 5,1%).

Figure 15: Unemployment rate by sex

The unemployment rate for women was 27,1% in Q1:2008, while the rate for men was 6,6 percentage points lower, and by Q4:2012 this gap had narrowed to 5,5 percentage points. Unemployment rate for women remained higher than the national average between Q1:2008 and Q4:2012. The biggest difference in unemployment rate between men and women was observed in Q2:2008 (7,1 percentage points), while the smallest difference was realised in Q4:2009 (3,5 percentage points).

Figure 16: Share of the unemployed by education level

In general, lower unemployment rates are associated with higher levels of education. In Q1:2008, about 64% of the unemployed did not have matric, while only 5,2% of the unemployed had tertiary qualifications. In Q4:2012, 61,3% of the unemployed did not have matric (2,8 percentage points lower than in Q1:2008) and only 6,2% had tertiary qualifications (1,0 percentage point higher than in Q1:2008). The share of the unemployed persons with educational levels lower than matric has been steady, accounting for around 60% in each quarter.

Figure 17: Unemployment rate by province

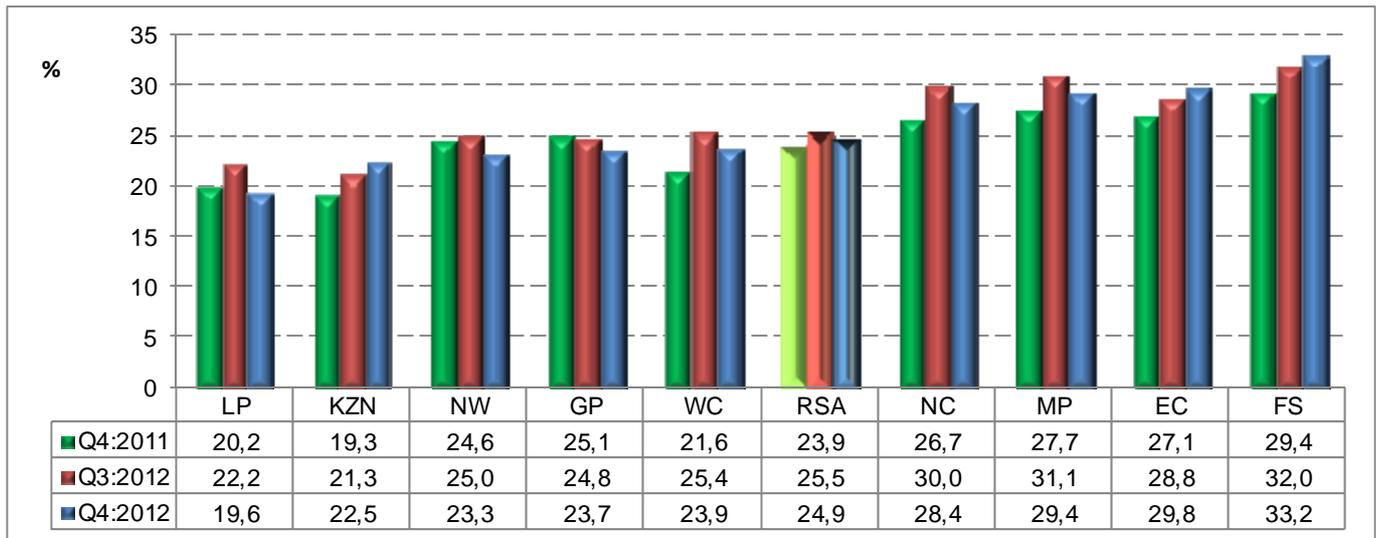

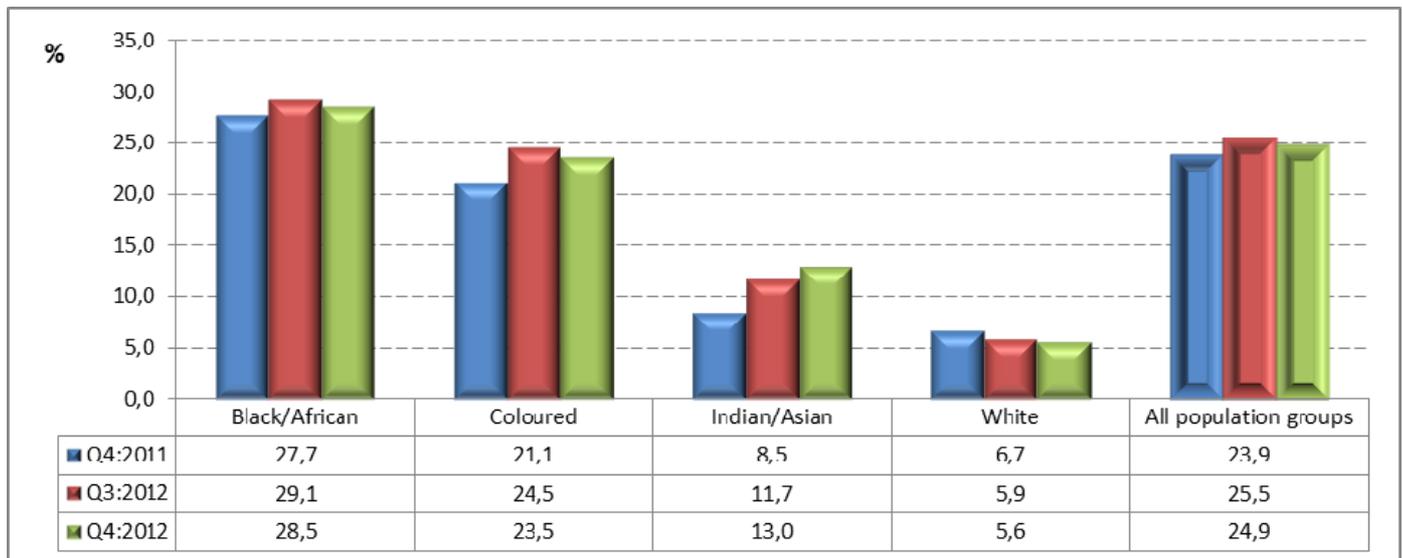

Figure 17 shows a decrease in the unemployment rate in six of the nine provinces in Q4:2012 compared to Q3:2012. The biggest decrease in the unemployment rate was observed in Limpopo (2,6 percentage points), North West (1,7 percentage points) and Mpumalanga (1,7 percentage points). The biggest increase in unemployment rate was recorded in KwaZulu-Natal (1,2 percentage points) and Free State (1,2 percentage points).

In comparison to the same period last year, the unemployment rate increased by 1,0 percentage point at the national level. The biggest increases in the unemployment rate were observed in Free State (3,8 percentage points), KwaZulu-Natal (3,2 percentage points) and Eastern Cape (2,7 percentage points). The biggest decrease in unemployment rate was recorded in Gauteng (1,4 percentage points) in the same period.

Figure 18: Unemployment rate by population group

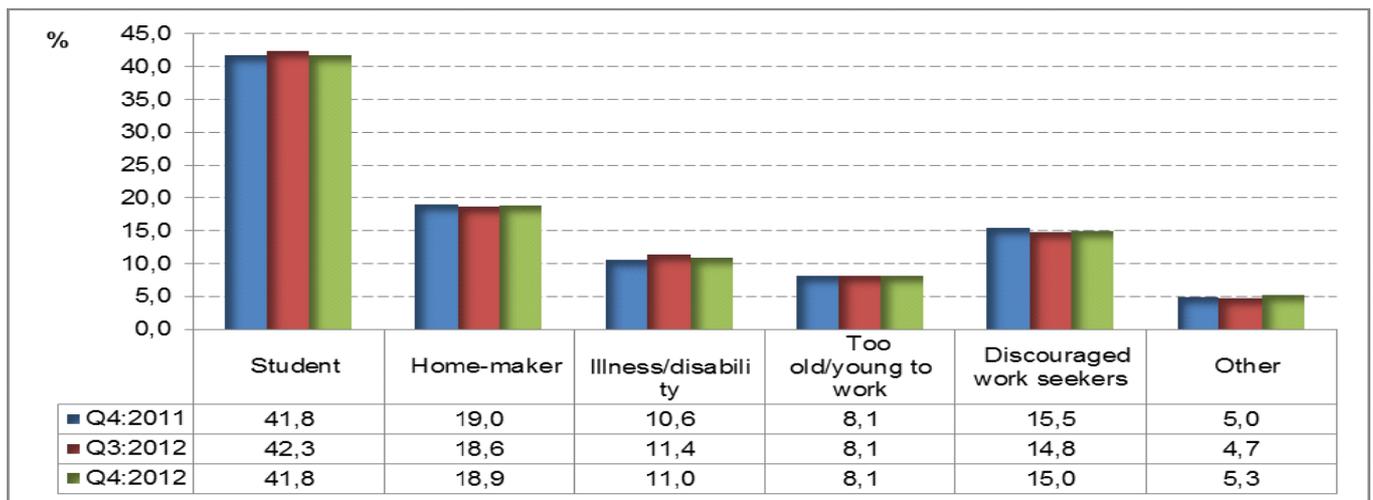

Between Q3:2012 and Q4:2012, unemployment rate decreased among the black African population (down by 0,6 of a percentage point), coloured (down by 1,0 percentage point) and white (down by 0,3 of a percentage point) population groups; while an increase of 1,3 percentage points was observed among the Indian/Asian population.

The year-on-year comparisons show an increase in the unemployment rate among the black African, coloured and Indian/Asian population groups, while it decreased among the white population group.

5. Characteristics of the not economically active population

Figure 19: The not economically active

In Q4:2012, students (41,8%) accounted for the largest share of the not economically active population, followed by home-makers (18,9%), while discouraged work-seekers accounted for 15,0% of the not economically active (0,2 of a percentage point higher than in the previous quarter).

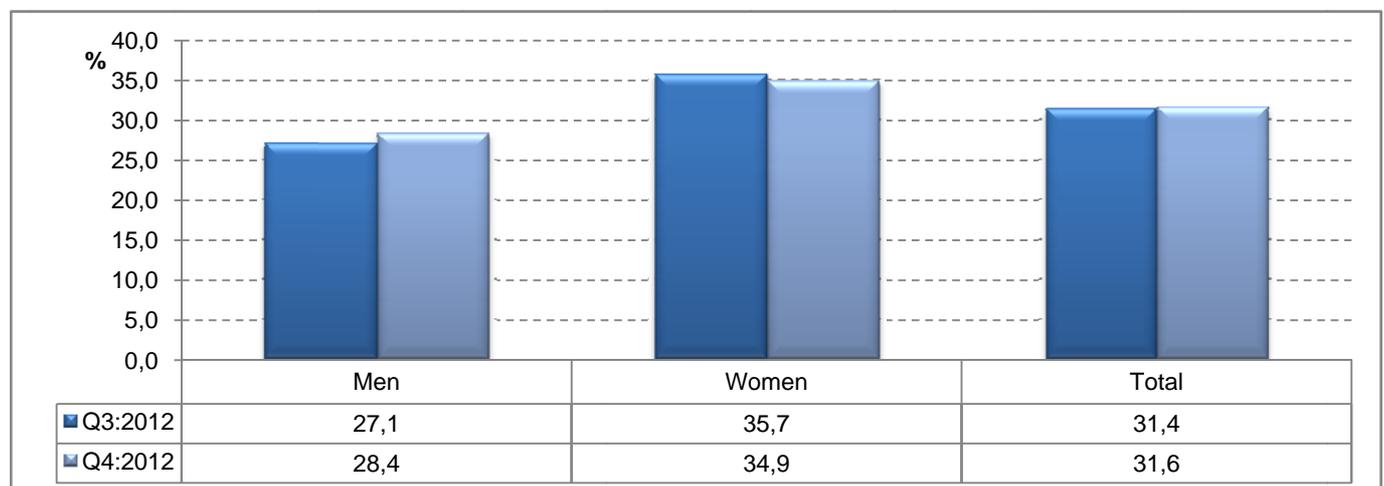

Compared to a year ago (Q4:2011), the share of students among the not economically active population remained unchanged; while the share of discouraged work-seekers decreased by 0,5 of a percentage point.

6. People who were not in employment, education or training (NEET)

Recently there has been increasing interest in the challenges faced by young people in the labour market. This interest resulted in a demand for more information on the dynamics of the youth not in employment, education or training (NEET). Consequently Stats SA decided to include questions in the QLFS questionnaire to enable the identification of the NEETs. The Q4:2012 release is the second report with statistics on NEETs.

Approximately a third of the youth aged 15–24 years were not in employment, education or training in Q4:2012, which indicates the vulnerability of this group. The youth who are categorised as NEET are considered to be disengaged from both work and education. In Q4:2012, approximately 3,3 million youth were NEETs.

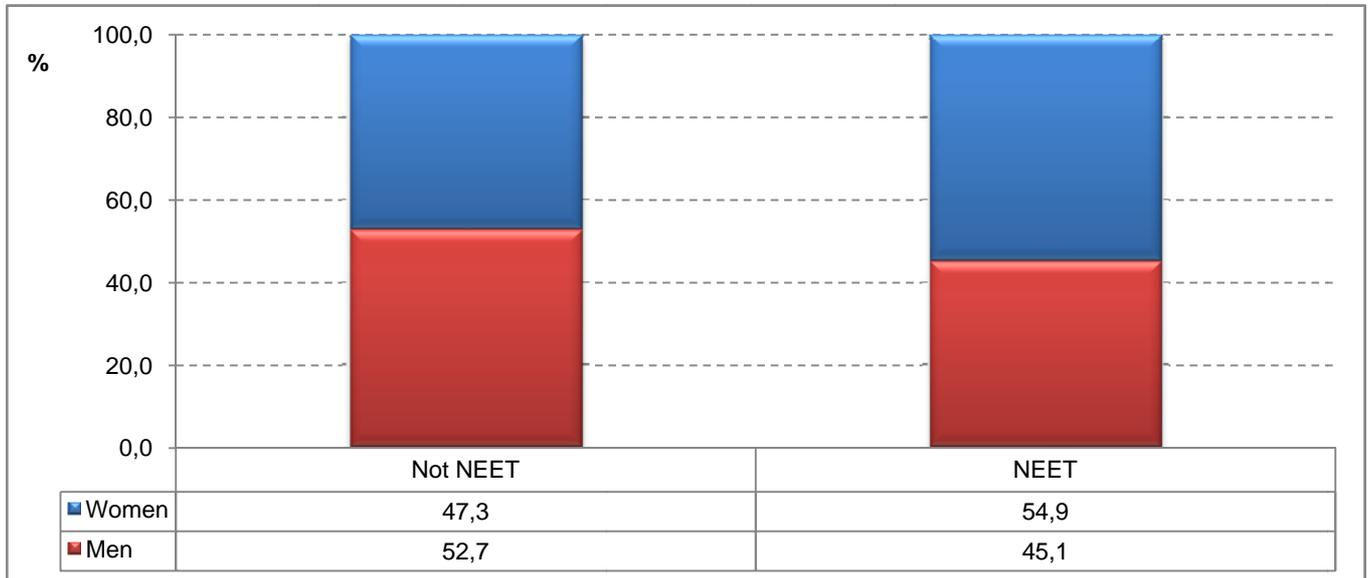

Figure 20: NEET rate¹ of youth aged 15–24 years by sex

¹Note: NEET rate = (Number of unemployed youth + number of youth not in the labour force) – (number of unemployed youth and youth not in the labour force who are in education or training) / Total number of youth.

In Q4:2012 a total NEET rate of 31,6% was observed for youth aged 15–24 years, with a NEET rate for women (34,9%) higher than the NEET rate for men (28,4%). Compared to Q3:2012 the NEET rate for women has decreased by 0,8 of a percentage point, while the NEET rate for men increased by 1,3 percentage points.

Figure 21: Share of 15–24 year olds who are not in the employment, education or training by sex

Women account for a bigger share of those aged 15–24 years who are not in employment, education or training; 54,9% were women and 45,1% were men (Figure 17).

Statistician-General: Statistics South Africa

7. Technical notes

7.1. Response details

Table F: Response rates by province

Province	Oct–Dec 2012
	Per cent
Western Cape	91,9
Eastern Cape	98,3
Northern Cape	91,4
Free State	96,7
KwaZulu-Natal	97,8
North West	93,4
Gauteng	78,1
Mpumalanga	93,8
Limpopo	98,7
South Africa	92,4

7.2. Survey requirements and design

The Quarterly Labour Force Survey (QLFS) frame has been developed as a general-purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA’s household-based surveys use a master sample of primary sampling units (PSUs) which comprise EAs that are drawn from across the country.

The sample is designed to be representative at provincial level and within provinces at metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the redesigned Labour Force Survey (i.e. the QLFS) is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

7.3. Sample rotation

Each quarter, a ¼ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

7.4. Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demographic division of Stats SA.

7.5. Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents; and weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

7.6. Final survey weights

The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography division) cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, etc., and 65 years and above. The provincial level age groups are: 0–14, 15–34, 35–64, and 65 years and over. The calibrated weights are constructed such that all persons in a household would have the same final weight.

7.7. Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in agriculture in Western Cape, number of females employed in manufacturing, etc.

7.8. Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-response and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors. The variance estimation methodology is discussed below.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jackknife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)¹. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation** (cv) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value < 0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value > 0,05, the difference is not significant.

¹Wolter KM, 2007. *Introduction to Variance Estimation, 2nd Edition*. New York: Springer-Verlag.

8. Definitions

Discouraged work-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week: did any work for at least one hour; or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore consist of all persons in the informal sector; employees in the formal sector; and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ less than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period was below 35 hours per week.

Underutilised labour comprises three groups as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

Unemployed persons are those (aged 15–64 years) who:

- a) Were not employed in the reference week **and**;
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview **and**;
- c) Were available for work, i.e. would have been able to start work or a business in the reference week **or**;
- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years
