Sampling

Sampling Procedure

In this study, we wanted to focus on villages that are representative of the poorer villages in different topographical locations across Indonesia. Hence, we sampled 32 villages in five island groups: Sumatera, Java, Kalimantan, Sulawesi, and East Nusa Tenggara. To find the poorer villages in these island groups, ideally we would select based on some direct measures of village-level poverty. However, since reliable poverty maps were only available at the kecamatan level or higher, we had to approximate. We first limited the sample villages to those located in kecamatan that are among the poorest 40% in each island group based on BPS's 2004 kecamatan-level poverty map.

To ensure the tractability of the survey, we then limited the sample to rural villages with between 300 and 600 households based on the Potensi Desa (Podes) 2005 data. Once we obtained a list of these villages, we categorized them in terms of their island groups and topography-whether each is located in a coastal, flatland, or hilly/mountainous area. Within each category, we selected 4-8 villages whose poverty characteristics (as provided by the Podes 2005 data) are around the median in each kecamatan.

The final list of 32 villages was determined after we consulted with the field team regarding the feasibility of conducting the survey within the allotted time, i.e., one survey wave in each quarter. Within each village, the survey interviewed village officials and a random sample of households.

To construct the sampling frame for households, the survey team conducted a mini-census of households. Based on the household consumption categories collected during the mini-census, 120 households were stratified-random sampled from each village.

Target households to be visited in one village is about 20-30% of the total number of households in the villages surveyed. In order to represent the entire village, the selection of households randomized with the following stages:
First, based on data from the census mini, households in the village are grouped into 3 groups of consumption (in rupiah).
Second, from each group equally and randomly selected number of households to be interviewed.
Third, a random list of all households created with a random sequence per village. Each household was selected as the sample of households will be printed in bold, and reserve households will be sorted later. List of random household will be arranged per consumption group.

In the first wave, each field team get a households list from each village visited.
Households reserve used to replace the sample households in the next wave, if there are households who moved out of the village.
Selection of replacement households conducted based on top sequence number of the list of reserves household in the same consumption group.

Questionnaires

Overview

The instruments used in the third wave survey were questionnaires that consists of:
- Village Financial Questionnaire
- Market Price Survey Questionnaire
- Household Questionnaire
- Social Network Questionnaire
- Anthropometry Questionnaire

Data Collection

Data Collection Dates

Data Collection Mode

Face-to-face

DATA COLLECTION NOTES

The survey was conducted by 5 field teams (Lampung, Central Java, East Nusa Tenggara, South Kalimantan, and South Sulawesi). Each team consists of 1 field supervisor and 2 interviewers except for Central Java team there were 3 interviewers. The data was collected by conducting visits and interviewed 3840 households in 32 villages every three months for one year.

The survey lasted for 14 months (July 2008 to August 2009) were divided into 4 rounds (every 3 months) and one additional mini-census prior to the main survey.
Mini census undertaken to compile a list of households from 32 villages. Mini-census results are used as the material for the sampling of households to be interviewed.

Anthropometric measurements performed by midwives who have been trained by the supervisor of the measurement procedures and filling in questionnaires. In order to maximize the accuracy of the measurements and results that standard, then the midwives were asked to apply the standard method of doing these measurements by using height and weight measurement tools provided by the research team. At the end of the field work, interviewers and supervisors checking and editing of the midwives work to ensure that all children aged 0-5 years of data were recorded as respondent was recorded in the anthropometry.

The average of interview time in wave 3 are:
- Village Financial Questionnaire=75 minutes
- Market Price Survey Questionnaire=75 minutes
- Household Questionnaire=75 minutes
- Social Networking Questionnaire=60 minutes
- Anthropometry Questionnaire=15 minutes (including anthopometric measurement)

SUPERVISION

Interviews were conducted by a team of interviewers. Each team consists of interviewers and supervisor.

The role of the team supervisor is to coordinate team in data collection activities, including management of field teams, manage team finances, and make arrangements for travel and accommodation. In addition, the supervisor assigned to do an interview to the village, sending progress reports and send the completed questionnaires to the central office.

In this study the data entry does not conducted in the field but centralized at the office of consultant. Therefore, cross-checking between the interviewer was carried to maintain quality of the data. The things done in the process of re-checking include: checking the completeness of responses to questionnaires (if there were any data missing or not), check the skip patterns, and checking consistencies in the data.

Is there any household member age 0 - 5 years old (calculated based on the data D04 on Household Book)?

Literal question

Household member number

Interviewer instructions

-Anthropometric measurements performed by midwives who have been trained by the supervisor of the measurement procedures and filling in questionnaires. In order to maximize the accuracy of the measurements and results that standard, then the midwives were asked to apply the standard method of doing these measurements by using height and weight measurement tools provided by the research team. At the end of the field work, interviewers and supervisors checking and editing of the midwives work to ensure that all children aged 0-5 years of data were recorded as respondent was recorded in the anthropometry.
- Weight and height measured using measuring instruments provided. For children ages 0 - 24 months, the height should be measured in lay down method. For children ages 24 months - 5 years, the height should be measured in standing method.
- Make sure! If there is any new infant household member also noted in this questionnaire.
- Write the number of household member ages 0 - 5 years in column F02

How much [...] weight at the moment? (af07)
File: AF

Overview	
Type: Continuous	Valid cases: 1856
Format: numeric	Invalid: 158
Width: 3	Minimum: 2
Decimals: 0	Maximum: 27.1
Range: 2-24	
Invalid: 101-101	

Literal question

How much [...] weight at the moment? (if the child could stand use digital scale)

Interviewer instructions

Measure the weight of children using electronic scales. The procedure needs the weighing.
Step 1: Take off the child's cloth that to be measured weight. Make sure the scales is not too hot exposed to the sun and were above a flat surface so that the results can be read clearly.
Step 2: Ask the mother to stand on the scales while holding her child. Record the scales result with one decimal after comma (eg 65.5 kg).
Step 3: Ask the mother to give the child she was carrying to the person who is nearby. Record the result the second scales only for mother (eg 58.3 kg). Weight difference of 7.2 kg is the weight of the child.

Invalid: 1001-1001	

Literal question

How much is [...] lenght? (based on measurement results)

Interviewer instructions

How much is [...] lenght? (af09)
File: AF

MEASUREMENT PROCEDURES:

A. Measure the height of children aged 24 months or more
I. Preparing measurement tools:
1. Put the measuring tools on the wall with a longer part on the floor and a shorter ones on the wall. Pull the measuring meter to the top until you can see the number 0 on the red line on the measuring glass on the floor (you have to kneel down to look at the 0's so that you have to assisted by someone to hold the upper end of the measuring meter). This procedure is essential to ensure accurate measurement.
2. Put the upper end of measuring device using nail, make sure the device stable and not moving
3. After you are ensure that the top is stabilized attached, then the measuring meter can be pulled to top and height measurement ready to be done.

II. Steps for height measurement:
1. Ask the child's mother to take off the child shoes and hair accessories that can be affect the measurement result. Ask the mother to bring the child to the measuring board and knelt in front of the child. Ask the mother to kneel down to the right of the child.
2. Kneel with your right knee to the left of the child. It will make you freely to move.
3. Place the child's both feet are aligned and concurrently in the middle and stick to the device / wall.
4. Ask the child to look straight ahead or toward the mother who stood in front of the child. Make sure the child's line of sight parallel to the ground. With your left hand hold the child's chin. Slowly tighten your hands. Do not cover the child's mouth or ears. Make sure the child's shoulders evenly, with a hand on the side, and the head, shoulder bones and buttocks stick to the measuring board / wall.
5. With your right hand, put the measuring meter to fit on the head of the child. Make sure you press the the child's hair. If the child's position is correct, read and record the measurement results with one decimal after comma by looking at the numbers in a measuring glass. Raise the meter from the top of the child's head and remove your left hand from the child's chin.

B. Measure the height of children aged 0 - 23 months
I. Preparing masurement tools:
1. Put the measuring tools on a flat hard surface, preferably a long table or a bed with one part attached to the wall. Attach the longer part of measuring device to the end that stick to the wall. Pull the measuring meter until you can see the number 0 in the red line on the measuring glass that stick to the wall. This procedure very important to ensure the accuracy measurement.
2. Put the upper end of measuring device using nail, make sure the device stable and not moving
3. After you are ensure that the top is stabilized attached, then the measuring meter can be pulled to top and height measurement ready to be done.

II. Steps for height measurement:
1. With the help of the child's mother, lay the child on a flat hard surface with holding the child's back with one hand and the bottom of the body with the other hand. Gently lower the child onto the hard surface with the foot against the wall.
2. Ask the mother of the child to kneel next to measuring tools overlooks measuring tools so that the child calmer.
3. Hold the child's head from both directions ears. By using the hand comfortably and straight, attach the child's head to the top of the board so that the child can measure looked straight towards the front. The child's line of sight should be perpendicular to the ground. Your head should be straight with the head of the child. Look directly into the eyes of the child.
4. Make sure the child is lying on a hard surface. Place your left hand at the end of the child's ankle (a little above the ankle joint) or on his knees. Press firmly to the hard surface.
5. Using your right hand, slide measuring device toward the child's head. Make sure you press the the child's hair. If the child's position is correct, read and record the measurement results.

Description

- The definition of a household asset (property) is all kinds of goods, land, or livestock are valued and owned by household members, either individually or in conjunction with another household member or a person outside the household.
- Although the property is in disrepair, but if it is still considered valuable by respondents still considered as an asset.
- The meaning of owned is if household member who own property have the authority / freedom to sell the asset.
- Assets of households that have not paid are considered as household assets.

Literal question

Type

Interviewer instructions

Section A. Household Asset is the most sensitive section in this book. Mostly responden refuse, not pleased, or unwilling to answer the question about the household assets. Explain that this study wants to collect information about the property and the needs of each region, as each region has different needs. And this research wants to gain a description of the differences, similarities, and uniqueness of each region.

Food consumption within the last week (hc01)
File: HC1

Overview	

Type: Discrete
Format: numeric
Width: 2
Decimals: 0
Range: 1-15

Valid cases: 57600
Invalid: 0
Minimum: 1
Maximum: 15

Description

- Consumption/expenditure on food consumption is the value of expenditures for household consumption in the last one week that comes from purchases, own productions or gifts.

- For food consumption, either the number and its value which were recorded is that really consumed by households during the survey reference period.
- Time reference used is the last week, a day before the interview 7 days backwards.

- Expenditure on food consumption which was included is the expenditure for the needs of all household members, not including expenditures for household business or purposes given to the other party.
- Each food type might come from purchases, own production, or gifts.

- Expenditure on food consumption according to the origin of food:
1. Food consumption from the purchase is food consumed derived from the purchase. Consumption of food / groceries were taken from the stalls / shops owned by the household is considered a purchase.
2. Food consumption derived from own production, ie if the food consumed comes from the household business, including agricultural produce that is not a household business. Examples of agricultural produce that is not a household business such as fruit taken from the yard, consume fowl, etc..
3. Food consumption that comes from gift, includes all consumption were "received" from others for free.

- For household member who were traveling at the time of the interview, spending on consumption still counted. The way by estimating the usual intake or calculated the same as other household member expenses. Estimates of food consumption from household member who traveling is recorded as processed food consumption.

Literal question

Food consumption within the last week (from purchases, own production, and gift)

Interviewer instructions

- For the ask technical of this part is by asking one by one for all kinds of foods listed in parentheses. The purpose in asking each detail is not to miss anything as the types are too many to remember one by one.. Moreover interviewer should also frequently remind respondents that the expenditure in question is for food / groceries that have been consumed over the last week. Can be derived from the purchase, own production, or gift from others.

- For the household members who are on the go, the calculation of consumption value is done by estimating consumption is calculated the same as usual or calculated the same as other household members expenses.

- For food from own production or gifts, the amount should be calculated in accordance with the local market price. Please note that respondent might give details on his purchases, but not all of them are consumed, therefore, only record food that has truly been consumed in the last one week.

Description

- Household is a person or a group of people living in a part of or the entire physical building, and usually live together and eat from the same kitchen. The meaning of 'eat from the same kitchen' is if the management of daily need is managed together as one household. A regular household usually consists of a mother, a father, and children.
- Household members (art) is all the people who usually reside in a household, whether they are present during the census or temporarily not present.
- Any household members who are away for 6 months or more, and members who are away for less than 6 months but have the intention to move out or will be away for more than 6 months, are not considered household members.
- People who have been living in the household for 6 months or more, or who have been living there for less than 6 months but have the intention to stay for 6 months or more, are considered household members.

Relationship with Head of Household (hd02)
File: HD

Description

- The head of household is a man in a group of household members who is responsible to provide the daily needs of the concerned households, or a person who is considerend/appointed to be the head of a household (for example a group of students live together in one room inside a census building; because they each are responsible for their own needs, one person is appointed as the household head).
- A head of household who owns more than one residence, is only recorded in one of his residences in which he stays the longest. Eg if the head of household is a man who has more than one wife, he recorded at home where he was staying longer.

Relationship with head of household:
- Spouse, is the wife/husband of the head of household
- Children, includes biological children, stepchildren, and/ or adopted children of the head of household
- Biological/step/foster brother or sister of the head of household
- Brother/sister in law, are biological/step/foster brother or sister of spouse
- Son/daughter in laws, are the husbands/wives of biological daughters/sons, step daughters/sons, or adopted daughters/sons
- Grandchildren, are the children of biological children, step children, or adopted children
- Parents/parent in laws, are father/mother of the head of household or father/mother of the spouse of the head of household
- Other families, are those who have blood relation with head of the household or the spouse, such as nephew, cousin, aunties, uncles, grandparents
- Household helpers, are people who works as a helper and lives in the concerned household, receiving wage/salary in the form money or in-kind payment
- Other, are people who do not have familial relation to the head of household or the spouse, who live in the household for more than 6 months, such as visitors, friends, or tenants who rent room plus food, including children of helpers who also live and eat in the employer's house.

Literal question

Relationship with Head of Household

Interviewer instructions

Ask the relation of each household member to the head of household and enter the code accordingly into the D02 column. The first household member should be the head of household, and therefore, Column D02 shoud be filled in with code 01, then followed by:
02. Spouse
03. Biological/step/foster children
04. Biological/step brother/sister
05. Brother/sister in law
06. Son/daughter in law
07. Grandchildren
08. Parents/parents in law
09. Other family
10. Housemaid
95. Others, specify _____

Range: 1-5	

Literal question

Date of Birth

Interviewer instructions

If the respondent were not sure of his age, please try to find more information about his age using the following manners:
1. Birth certificate, birth affidavit, doctor's card, immunization card, Road to Health Card (KMS) or other notes or other records made by his parents. Note the date of issuance of the documents (e.g. ID Card or Family Card); if it stated the age (not the date of birth).
2. Connect the respondent's date of birth with the date, month, and year of an event in Indonesia or in the region which is wellknown nationally or regionally.
Example:
National election, volcano eruption, flood, fire, regional election, etc. Several other important event that can be used to estimate the age of a respondent are among others:
a. Japanese troops landing in Indonesia (1942)
b. The proclamation of the Independence of Indonesia (1945)
c. The First National Election (1955)
d. The Rebellion og G30S/PKI (Indonesian Communist Party) (1965)
3. Compare household members age between siblings. Start with estimating the age of the youngest child, then compare him/her with the second youngest child by asking how old he/she is or asking the things he/she could do [sitting (6 months), crawling (8 months), standing (9 months), walking (12 months)] while his younger brother/sister was born or started being in the womb. Do the above method to get information on the older children.
4. Compare the respondent with the neighbor's child or sibling whose age has been confirmed. Make an estimation on how many months older or younger the respondent is in comparison with those other children.
Is not uncommon for a respondent to say they do not know their age and when asked about his/her age, the answer is " up to you, Sir/Madam". In such cases, enumerators shall be required to ask again with more patience, to repeat all methods suggested.

Description

Marital status (hd05)
File: HD

- Single: is a status of those who have never bound in a marriage.
- Married: is a status of those who are bound in a marriage upon census taking, both live together or separately. In this case, not only those who are legally married (custom, religion, state) but also those who are considered man and wife by the surrounding community.
- Divorced (by law): is a status of those who are separated as man and wife because they are divorced or have not got re-married. This includes those who admit to be divorced although not officially yet. On the contrary, this excludes those who live separately but are still bound in marriage, for instance man/wife abandoned by man/wife who has moved to another place to study, work, seek for a job, or any other need. A woman who admits to have never been married but was once pregnant should be considered divorced.
- Divorced (by nature/death): is a status for those whose husband/wife has passed away and have not got re-married.

Field of business of [...] main job (hd12)
File: HD

Overview

Type: Discrete
Format: numeric
Width: 3
Decimals: 0
Range: 1-95
Invalid: 101

Valid cases: 7640
Invalid: 9484
Minimum: 1
Maximum: 95

Description

- The main work is the most time-consuming work of ART in the past 3 months
- Field of business/occupation of main is a field of activity of work/business/company/office where a person works, or produced by the company/office where a person works.

The method to determine whether an activity is a main job or not is as follows:
1. If respondent during the previous week only had one job, then the job is registered as the main job;
2. If respondent during the previous week had more than one job, then the job that takes most of the time is registered as the main job. If the jobs take equal time, then the job that provides the largest income is registered as the main job. If the time spent and the income are equal, then it's up to respondent, which job is considered the main job.

Description

[...] job status (hd13)
File: HD

Job status is the type of position of a person in a job, consisting of:

1. Own business: is to work or to do business bearing a risk economically, among others production cost that has been spent for a business that does not return, not using paid or unpaid workers both technology as well as special skill.
Explanation:
In a company set up by more than one person and has no worker/employee, each person has the status of own business.
Examples:
A freelance driver (who receives no fixed salary and uses deposit system instead), becak driver, carpenter, bricklayer, electrician, masseuse, well digger, newspaper agent, ojek driver, merchant, doctor/midwife/healer who open their own practice, ticket seller, property broker and so on.

2. To do business assisted by non permanent/unpaid worker is to work or to do business one his/her own risk, and uses unpaid worker/employee and or non permanent worker/employee.
Non permanent worker/employee is a worker/employee who works for a person or institution/office/company and receives salary only based on working hours or volume of the work.
Examples:
a. A shop owner assisted by members of the family/unpaid worker and or assisted by another person who receives wage based on the working days.
b. A pitchman assisted by unpaid worker or another person who receives wage only when he/she helps.
c. A farmer who cultivates his land assisted by unpaid worker. Although at harvest, the farmer shares the harvest, the harvester is not considered as a permanent worker.

3. To do business assisted by permanent worker/paid worker is to do business on his/her own risk and employs at least one permanent and paid worker/employee.
Permanent and paid worker/employee is a person who works for another person or institution/office/company and receives salary permanently, whether there is or there is no activity.
Examples:
a. A shop owner who employs one or more permanent workers;
b. A cigarette plant owner who employs permanent workers.

4. Employee/government worker is a person who works for government institutions/office or a company belong to government permanently and recieves wage/salary both money as well as goods.

5. Worker/employee is a person who works for another person or institution/office/company permanently and receives wage/salary both money as well as goods. A worker who has no permanent employer, is not categorized as worker/employee but freelancer instead. A person is considered to have a permanent employer, if he/she has a permanent employer during the last one month. Especially for worker in the construction field, he is considered to be worker if he has worked for at least three months for one employer.

6. Freelance worker at agriculture is a person who works for another non permanent person/employer/institution (more than one employer during the last one month) in agriculture both home business or not and receives wage in both money as well as goods, both daily as well as contract system.
Agricultural sector includes crops, plantation, forestry, stock breeding, fishery, and hunt.
- Employer is a person or a party that provides a job on an agreed payment.
Examples of a person who is an employer:
a. A rice farmer who employs a farm worker to cultivate the rice field on daily wage basis;
b. A plantation owner who employs several persons to pick coconuts on wage basis.
Examples of freelancer in agriculture: rice harvest worker, hoe artisan, rubber tapper, fishpond prawn harvest worker, coffee, coconut, clove picker, and so on.

7. Freelancer in non agriculture is a person who works for another non permanent person/employer/institution (more than one employer during the last one month), in non agriculture and receives wage in both money as well as goods, both daily as well as contract system.
Explanation: Non agriculture business is business in all sectors except agriculture.
Examples of freelancer in non agriculture: coolie in the market, railway station or other places that have no permanent employer, prospective passenger of public transportation, mobile washerwoman, scavenger, construction worker, free parking attendant, and so on.

8. Family worker/unpaid is a person who works helping another person who makes a business and receives no wage/salary, nor money nor goods.
Unpaid worker consists of:
a. Household member of the person he/she helps, for instance a wife who helps her husband at the rice field;
b. Not a permanent member of the household of the person he/she helps, for instance a relative who helps selling in the shop;
c. Not a member of the household and not a relative of the person he/she helps, for instance a person who helps weaving hats in a neighbor's home industry.

Description

- Wages and salaries are the remuneration received by the worker or employee in accordance with the agreement or certain rules.
- Wages are usually only based on an agreement between the workers (not fixed) and the employer, usually not routine, depending on the whether there is a given job or not.
- Salaries given to permanent workers or employees.
- Wages / salaries may the form of cash or goods / services

How to determine the main work:
- If a household head/member in the last one week only has only one work, then it is considered the main work.
- If a household head/member in the last one week has more than one work, the main work is the one that consumes the most time.
- If the time spent to do those works are the same, then the work that produces the largest income is considered the main work.
- If the time spend and the amount of income are the same, please ask the respondent which one is considered his main work.
- A household head/member is considered to have more than one job if the management of such works done separately. However, a farm worker who works for several farm owners (separate management) is considered having one main work.

Literal question

Main job for the past one month (cash, Rp)

- Write down 0 if in three months is intended no actual income from household enterprises in agriculture.

Production cost for the past 3 months: a. wages/salary (Rp) (hi11a)
File: HIB

Overview	
Type: Continuous	Valid cases: 6058
Format: numeric	Invalid: 600
Width: 9	Minimum: 0
Decimals: 0	Maximum: 18000000
Range: 0-63750000	
Invalid: 100000001, 100000001, 100000001	

Description

- Production Cost includes all costs incurred for the use of seeds, fertilizers, agricultural medicines, animals rent, wages of worker/ employee, spraying wages, equipment rent, etc..
- The cost of production is meant here is the actual incurred by households within the past three months.

Literal question

Production cost for the past 3 months: a. wages/salary

Production cost for the past 3 months: b. raw materials & others (Rp) (hi11b)
File: HIB

Overview	

Production cost for the past 3 months: b. raw materials & others (Rp) (hi11b)
File: HIB

Type: Continuous
Format: numeric
Width: 9
Decimals: 0
Range: 0-74500000
Invalid: 100000001, 100000001, 100000001

Valid cases: 6055
Invalid: 603
Minimum: 0
Maximum: 60000000

Description

Raw materials and other production are costs that issued for purchase of raw materials such as seeds, fertilizers, agricultural medicines, purchase equipment, and pay for services like animals rent, tools, freight, and transportation.

Literal question

Production cost for the past 3 months: b. raw materials & others (including transportation)

Sales for the past 3 months (Rp) (hi12)
File: HIB

Overview

Type: Continuous
Format: numeric
Width: 10
Decimals: 0
Range: 0-447120000
Invalid: 1000000001, 1000000001

Valid cases: 6063
Invalid: 595
Minimum: 0
Maximum: 100000000

Description

- Is the value of commodities issued by the RT, whether are sold, own consumed, or that given within a period of 3 months ago.
- The criteria of commodities same as the explanation in I10. For example if respondent has cattle and which is cultivated is milk, then the value in I12 is the sale, consumption, and delivery of milk. If in the past three months there was also a cow that sold, the value of sales excluding the income from commodity but should recorded as the income of non-business and income of ownership.

Literal question

Sales for the past 3 months

Raw material stocks at the end of last month (Rp) (hi13)
File: HIB

Overview

Type: Continuous
Format: numeric
Width: 9
Decimals: 0
Range: 0-52000000
Invalid: 100000001, 100000001

Valid cases: 6005
Invalid: 653
Minimum: 0
Maximum: 30000000

Description

Raw material stocks at the end of last month is the value of raw material that owned at the prior month's interview. For example for commodity of paddy, the value of raw materials meant are the remaining seeds, fertilizers or pesticides that have not been used.

Literal question

Raw material stock at the end of last month

Household questionnaire ID (hid)

Type of health facilities (nh01type)
File: NH

Overview

Type: Discrete
Format: numeric
Width: 2
Decimals: 0
Range: 1-10

Valid cases: 38400
Invalid: 0
Minimum: 1
Maximum: 10

Description

Type of health facilities:
1. General hospital, is a hospital owned by the central government (such as RSCM/RSUP Dr. Cipto Mangunkusumo); regional government (such as RSU Labuan Baji), National Army/TNI (such as RSPAD), or State-owned Enterprise/BUMN (such as RS Pertamina).
2. Private hospital, is a private owned hospital such as RS St. Carolus, RS Medistra.
3. Community health center (Puskesmas)/ Pustu, is a health service unit owned by the government responsible for providing health services to the community in sub-districts, part of sub-districts or kelurahan (such in DKI Jakarta). Puskesmas team can do mobile practices to certain places within its working territory in order to provide easier access of health services for the society. While pustu is a health service unit that provide assistance to puskesmas in some parts of the Puskesmas working area.
4. Polyclinic/ Private clinic, is a health service center for outpatient (not hospitalized); usually managed by privates, companies, foundations, Army/TNI or various Departments/BUMN.
5. Doctors private practice, are private/personal practices of physicians, whether general practitioners, dentists, or specialists.
6. Village maternity post (Polindes)/ Midwife, is a building constructed with financial donations from the government and villagers to help births and provide a place for delivering women to stay and for a village midwife to reside. In addition to births, it also provides Maternal and Child Health (KIA) services, Birth Control (KB), and other health services, which are needed by the community and consistent with the midwife's technical competencies.
7. Midwife private practice, is a health facility/building used by a practicing midwife usually to provide services for pregnant women and babies.
8. Nurse/ Orderly (mantri) private practice, is a private/personal practice by a nurse or orderly; open outside the hospital, puskesmas, pustu, polindes, posyandu, or clinic.
9. Integrated service post, is a vehicle for public participation, managed and organized from, by, for and together with the community to provide primary health services and monitor under-5 growths in the framework of improving the quality of human resources early. The activities include immunization, public nutrition education, and maternal and child health services.
10. Traditional practices/healer/traditional midwife/alternative, is an alternative health service by shaman/healer/sinshe, including accupuncture practice, finger therapy, paranormal, radiesthesia (usually using a pendulum). While traditional midwife is an alternative health practice by a midwife who specifically handles pregnancy or delivering baby, whether she has been trained by the Ministry of Health or not. The term midwife also known as paraji in West Java, dukun beranak in DKI Jakarta, etc.

Literal question

Type

For the past 3 months, is there any HH Member who visit [....] for medical treat (nh01)
File: NH

Overview

For the past 3 months, is there any HH Member who visit [....] for medical treat (nh01)
File: NH

Type: Discrete	Valid cases: 38360
Format: numeric	Invalid: 40
Width: 2	Minimum: 1
Decimals: 0	Maximum: 3
Range: 1-3	
Invalid: 11	

Description

- Outpatient is effort of household members to consult and get treatment or family planning purposes by visiting health centers without a stay, including health workers bring home.
- Not including health test (KIR) eg to driving license, hiring, promotion, etc., because health checks for KIR done just as a requirement, not for treatment.

Literal question

For the past 3 months, is there any HH Member who visit [....] for medical treatment?

Post question

If H01= 3. No, then skip to next line

How many times the HH Member visit [...] for the past 3 months (nh02)
