Sampling

Sampling Procedure

In measuring poverty, BPS uses the concept of the ability to meet basic needs (basic needs). For macro data and information poverty, the data source is the National Socio-Economic Survey (NSES) BPS conducted every year. For micro poverty data, in 2005 the BPS has conducted Social Economic Colletion (PSE05), which aims to get a database of poor households who deserve direct cash assistance (BLT) in 2005-2006. In addition to BLT program, data PSE05 also used in targeting households on several national programs, such as the Health Insurance of the Poor (HIP) and cheap rice program for the poor (Raskin). After PSE05 activities, in 2007 the BPS also organize poverty micro data collection for household database program recipients of Direct Conditional Cash Transfer (Family Hope Program) in 2007 and 2008 through a survey of Primary Health Care and Education 2007 (SPDKP07).

Age (umur)
File: data_h_art

Overview

Type: Continuous	Valid cases: 21543
Format: numeric	Invalid: 0
Width: 2	Minimum: 0
Decimals: 0	Maximum: 99
Range: 0-99	

Description

In terms of demographics, age is defined as units of time (days, months or years) ever passed by someone in his life. Since this age is always rounded down under the age of last birthday. Experience has shown that the age of the respondents tend to be rounded up. For that, need to be asked again whether the respondent has reached the age at the answer. Once sure of the answers regarding the respondent's age, input into the answer box. Entries in this column between 0-98 years.
example:
1. If the respondent says that he was born on 7 April 1951, and or census in September 2008, the age of respondents was 57 years (2008-1951).
2. If the respondent says he was born on December 22, in December 1951, and or census in September 2008, the age of respondents 56 years (2008-1951-1).
3. Respondents born on 10 Sha'ban 1397 H, and or enumeration in September 2008, as the 10th Sha'ban 1397 H coincides with the date of July 27, 1977, the respondent's age 31, (2008-1977).
CHARGING FOR AGE ONLY TWO BOXES PROVIDED, THAT FOR LESS THAN 10 YEARS OLD HAVE ADDED IN BOX NUMBERS 0 AND THE FIRST 98 YEARS OLD OR MORE written 98.

example:
11 months 0 0

5 years 11 months 0 5

102 year 9 8

Sources of drinking water (sumberair)
File: data_h_rmt

Overview

Type: Discrete
Format: numeric
Width: 1
Decimals: 0
Range: 0-9

Valid cases: 5368
Invalid: 0
Minimum: 0
Maximum: 9

Description

Sources of drinking water (sumberair)
File: data_h_rmt

Ask your primary source of drinking water used by the household. Circle one answer corresponding code and write in the box provided.

It should also be remembered that in question here is the source. So if the respondent households get water from springs is channeled up to the house, then the source of its water from springs. When respondents use the water that comes from a water source, then select the one that springs most volume of water used by the household.

Code 1: Bottled water is water that is produced and distributed by a company in bottle and glass packaging, such as bottled water brand Aqua, Moya, 2 Tang, VIT, and drinking water refill.

Code 2: Plumbing is produced through the process of water purification and sanitation before channeled to consumers through an installation of a water channel. This water source cultivated by PAM (Drinking Water Company), PDAM (Regional Water Company), or BPAM (Water Management Agency), both government-run and private.

Code 3: The pump is the way groundwater extraction is by using a hand pump, electric pump, or windmill, including artesian wells (wells pantek)

Code 4: The well protected when the circumference / dungeon protected by a wall of at least 0.8 meters above the ground and 3 feet under the ground, and no cement floor as far as 1 meter away from the circumference of the well or cistern Water well / cistern is the water that comes from the soil excavated. The way they were taken by using a bailer or bucket, either with or without a pulley.

Code 5: unprotected wells are the water that comes from the soil excavated and unprotected from water used, the former bathing, washing, or other.

Code 6: protected springs are springs that are protected from water used, the former bathing, washing, or other.

Code 7: unprotected springs are springs that have been mixed with the water used, the former bathing, washing, or other.

Code 8: River water is water from the river.

Code 9: Rain water is water that comes from rain, usually in a hard water area, so in the rainy season the rainwater harvesting them in a tub / pool so during the dry season the water can be used.

Code 0: Other is the source of water other than those mentioned above such as water reservoirs / lakes.

Literal question

What is the source of drinking water in this household?
