Sampling

Sampling Procedure

The participating households were randomly chosen from the Amhara, Oromia, SSNP, Benshangul Gumaz, and Afar regions. The sample consists of 1,609 households from Ethiopia's Amhara, Oromia, SSNP, Benshangul Gumaz, and Afar regions. Among the 1,609 households, there are 1,136 male and 473 female respondents. Among these, 10 male respondents are not heads of their households, and 46 women are not heads of their household. Thus 1,172 households have a male head, and 437 households have a female head. The average size of a household is 6 people, mostly consisting of the household head, spouse, and children. The average age of a household head is about 44. Lastly, 1,008 household heads have no education and 596 have attended at least one year of school.

Weighting

DATA COLLECTION NOTES

Data were collected with a household survey completed mostly by the household head, using a survey enumerator and supervisor. The survey primarily asked about the household head, including his/her basic information about each household member and the consumption patterns of the household. The survey is primarily concerned with the effect of RCBP on agriculture, so it asks about access to agricultural extension services through Farmer Training Centers (FTCs) and Development Agencies (DAs). Finally, the survey focuses on specific details about the plots, crop production, and livestock for each household. Some questions were a specialized multiple choice, and others required a numerical value. The remaining questions had answers of the form "yes / no / don't know / refuse to answer" or "everytime / sometimes / one-one time / never/ don't know / refuse to answer.
