DATA COLLECTION NOTES

In each of the two cohorts of the evaluation sample (2013 and 2014), the evaluation includes two arms: one treatment and one control arm. For each applicant cohort, in the treatment arm applicants without sibling priority are randomly assigned to a first-grade slot at Christel House Mexico (CHM). Applicants without sibling priority who do not gain admission to a first-grade slot at CHM are assigned to the control condition. The unit of assignment is the applicant, which implies that there are no assignment clusters.
