Sampling

Sampling Procedure

MICRODATA SOURCE: U.S. Census Bureau

SAMPLE UNIT: Household

SAMPLE FRACTION: 5%

SAMPLE SIZE (person records): 189,828

Response Rate

UNDERCOUNT: No official estimates

Weighting

Weights computed by census agency should be used for most types of analysis.

Questionnaires

Overview

The 2000 census used a long form questionnaire. Long Form Sampling Entities (LFSEs) were used to determine sampling rates. If the smallest LFSE that included all or any part of a block had an estimated housing unit count of less than 800, the housing units in the block were sampled at a 1-in-2 rate. If it had an estimated housing unit count of 800 or more but less than 1,200, units were sampled at a 1-in-4 rate. If a block was not in either of the two previous categories, and was part of an interim census tract with 2,000 or more estimated housing units, units were sampled at a 1-in-8 rate. Housing units in all remaining blocks were sampled at a 1-in-6 rate. When all sampling rates were taken into account across the nation, approximately 1 out of every 6 housing units was included in the Census 2000 sample.

Data Collection

Data Collection Dates

Start	End	Cycle
2000-04-01	2000-04-01	N/A

Time Periods

Start	End	Cycle
2000-04-01	2000-04-01	N/A

Data Collection Mode

Face-to-face [f2f]
