## Record type (RECTYPE)

File: FRA1982-H-H

### Overview

Type: Discrete

Format: character

Width: 1

Valid cases: 0

Invalid: 0

### Description

RECTYPE identifies the type of record for the case: household or person.

NOTE: RECTYPE is an alphabetic (character string) variable with a value of 'H' for household records and 'P' for person records. RECTYPE will not appear as a variable in the default rectangular extracts produced by the data extract system. It is only available in hierarchical extracts, to distinguish between the two record types.

## Year (YEAR)

### Overview

Type: Discrete

Format: numeric

Width: 4

Decimals: 0

Range: 1960-2011

Valid cases: 0

Invalid: 0

### Description

YEAR gives the year in which the census was taken.

## IPUMS sample identifier (SAMPLE)

File: FRA1982-H-H

### Overview

Type: Discrete

Format: numeric

Width: 9

Decimals: 0

Range: 32197001-894201001

Valid cases: 0

Invalid: 0

### Description

SAMPLE identifies the IPUMS sample from which the case is drawn. Each sample receives a unique 9-digit code. The code is structured as follows:

The first 3 digits are the ISO/UN codes used in COUNTRY

The next 4 digits are the year of the census/survey

The final 2 digits identify the sample within the year. For the last two digits, censuses or large census-like surveys have a value "0" (e.g., 01) in the second-to-last digit, household surveys have a value of "2" (e.g., 21), and employment surveys have a value of "4" (e.g., 41).

## Household serial number (SERIAL)

### File: FRA1982-H-H

#### Overview

Type: Continuous  
Format: numeric  
Width: 10  
Decimals: 0

Valid cases: 0  
Invalid: 0

#### Description

SERIAL is an identifying number unique to each household in a given sample. All person records are assigned the same serial number as the household record that they follow. (Person records also have their own unique identifiers -- see PERNUM.) The combination of SAMPLE and SERIAL provides a unique identifier for every household in the IPUMS-International database; SAMPLE, SERIAL and PERNUM uniquely identify every person in the database.

SERIAL can be used to identify dwellings in some samples. In these samples, the first 7 digits of SERIAL provide the dwelling number common to all households that were sampled from the same structure. The last three digits give the sequence of the household within the dwelling. The following is a list of samples in which dwellings can be inferred:

Chile 1970, 1992, 2002  
Colombia 1993, 2005  
Costa Rica 1984, 2000  
Cuba 2002  
Dominican Republic 1981, 2002, 2010  
Ecuador 1990, 2001  
Germany 1971  
Hungary 1980, 1990, 2001  
Jamaica 1982, 1991, 2001  
Malaysia 1970, 1991, 2000  
Mexico 1995, 1990, 2000, 2005  
Nigeria 2006  
Panama 2000  
Peru 1993, 2007  
Portugal 1981, 1991, 2001  
Spain 1991  
Uruguay 2011  
Venezuela 1990, 2001  
Vietnam 1989

In all other samples, the last 3 digits are always zeroes.

SERIAL was constructed for IPUMS-International, and has no relation to the serial number in the original datasets.

## Number of person records in the household (PERSONS)

### File: FRA1982-H-H

#### Overview

Type: Continuous  
Format: numeric  
Width: 3  
Decimals: 0

Valid cases: 0  
Invalid: 0

#### Description

PERSONS indicates how many person records are included in the household (i.e., the number of person records associated with the household record in the sample). These person records will all have the same serial number (SERIAL) as the household record. The information contained in the household record will normally apply to all of these persons.

## Subsample number (SUBSAMP)

### File: FRA1982-H-H

## Subsample number (SUBSAMP)

File: FRA1982-H-H

### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-99

Valid cases: 0  
Invalid: 0

### Description

SUBSAMP allocates each case to one of 100 subsample replicates, randomly numbered from 0 to 99. Each subsample is nationally representative and preserves any stratification of the sample from which it is drawn. Users who need a representative subset of a sample can use SUBSAMP to select their cases. For example, to randomly extract 10% of the cases from a sample, select any 10 of the 100 subsamples.

## Group quarters (collective dwelling) status (GQ)

File: FRA1982-H-H

### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-99

Valid cases: 0  
Invalid: 0

### Description

GQ identifies households as vacant dwellings, group quarters, or private households. Group quarters -- collective dwellings -- are generally institutions and other group living arrangements such as rooming houses and boarding schools.

Institutions often retain persons under formal supervision or custody, such as correctional institutions, military barracks, asylums, or nursing homes. Educational and religious group dwellings (e.g., boarding schools, convents, monasteries, etc.) are also included in the institutional classification.

Group quarter designations are often useful for understanding the universe of households that answered questions about household characteristics. Censuses will often exclude group quarters from such questions.

### Description

ENUTS1 identifies the Nomenclature of Territorial Units for Statistics (NUTS) within Europe in which the household was enumerated. NUTS1 is the first level territorial units within countries. NUTS is a standard administrative division of the European Union, and was developed by the EU. The European Free Trade Association extends the NUTS system to several additional countries outside of the EU, and they are also incorporated into this variable.

The code labels include the standard code for the NUTS1 system and the name of the NUTS1 region, separated by a slash.

The full set of geography variables for the countries can be found in the IPUMS International Geography variables list. For cross-national geographic analysis on the first and second major administrative level refer to GEOLEV1, and GEOLEV2. More information on IPUMS-International geography can be found [here](#).

### Description

HHTYPE is a constructed variable that describes the composition of households.

HHTYPE is constructed from information in RELATE (relationship to head), from the constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father), and from information on group quarters status, GQ.

#### Description

NFAMS is a constructed variable that indicates the number of families within each household. A "family" is any group of persons related by blood, adoption, or marriage. An unrelated individual within the household is considered a separate family. Thus, a household consisting of a widow and her servant contains two families; a household consisting of a large, multiple-generation extended family with no lodgers or servants would count as a single family.

NFAMS is constructed from information in RELATE (relationship to head) and from the constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father). See those variable descriptions for more detail.

GEOLEV1 indicates the major administrative unit in which the household was enumerated. The variable incorporates the geographies for every country, to enable cross-national geographic analysis over time. First administrative units in GEOLEV1 have been spatiotemporally harmonized to provide spatially consistent boundaries across samples in each country.

Question 3: Year in which construction was completed

You will be able to get this information by asking the owner, the caretaker, long- time residents of the building (or the neighborhood). Some buildings have the building completion date engraved on the facade. Lacking direct information, you can classify the buildings by comparing them with others which are typical of a certain time period. The city hall may be able to indicate if there are sizeable blocks in your district built at specific time periods.

For buildings completed beginning in 1961 (headings 5, 6 and 7), specify the year of completion.

In case of renovation or the addition of more floors, indicate the year of the renovation or addition.

## Building central heat (FR1982A\_0016)

Question 9: Central Heating

1.- The case of cooperative housing [immeubles collectifs].

Cooperative housing is said to have a shared heating plant when it is fed, in most of the dwellings, by a single source of heat (a boiler, for example); buildings having integrated electric heat or forced- air heat [chauffage central par air puls] are considered in the same way.

[p. 17]

As for the source of shared heat [chaleur commune] it can be:

- The building's own heat. In this case, check off box number 3;
- Common to a group of buildings (generally neighboring buildings): in this case, check off box number 2 ;
- Common to a large number of buildings scattered throughout a common area depending on a common or inter- municipal establishment: in this case, check off box number 1.

Check off box number 4 in all other cases, even if it is a cooperative building in which most of the dwellings have individual central heating.

2. The case of single family houses

For a single family house with central heat, check box number 3.

However, if the heating for a group of single family houses is provided by collective heat (other than urban heat) check box 2.

3. If you have checked boxes 2 or 3 of the main question (whether it be related to a cooperative building [immeuble collectif] or a single family house, don't forget to specify the fuel used.

### Question 10: Farms

1. A farm is a production unit subject to an ongoing unique management, which is involved in agricultural production, is located in a determined place (a headquarters) and includes at least one hectare of arable agricultural land (workable land, prairies, other cultivation, other farmland, but not including woods/forests, heaths, building sites, parks and ornamental gardens)

- Or, otherwise, 20 units of specialized cultivation, (market gardens, flowers, vineyards, orchards, hops, tobacco, botanical nursery),

- Or, otherwise, very productive or well-known cultivation in a smaller area, for example, 10 units of vineyards which have been awarded a recognized status [appellation contrle],

Or, otherwise, a certain minimum of animals (a milk cow, a mother sow, a broodmare),

This definition is applied regardless of the principal activity of the person who farms.

2. The agricultural building (type 1 building) which functions as the place of resident for the owner will be considered the headquarters/seat of management [sige d'exploitation].

3. As far as the orientation of agricultural production, it may be understood by "farm with a principal production" a farm in which a single one of the five indicated orientations on the first line/indent [alina] of question 10b provides greater than 2/3 of the total sales.

## Type of dwelling (FR1982A\_0022)

### File: FRA1982-H-H

#### 4.2.1 Definition of a dwelling

During the first round, you should take an inventory of the dwellings in each building, whether or not they are occupied, and draw up a housing form for each one.

Generally, the idea of dwelling is not ambiguous, given that the definition used by the census coincides with the standard meaning of the term. However, in some specific cases, the definition of dwelling lies, of necessity, with convention. The census has some conventions which are specific to it and which you should know thoroughly. By applying the rules stated below, you alone must decide if a specific premises, room or suite of rooms should be considered a separate dwelling: you should not let the residents themselves decide according to their individual assessment. It is only by doing this that the census of dwellings [logements] will have the desired accuracy.

Dwelling will be understood to mean all premises which are at the same time:

- separate
- independent
- used to live in

We will consider these 3 conditions one by one.

1. The premises (a single room or a suite of rooms) must be separate, i.e., it must be completely enclosed by walls or dividers [cloisons]; it should not connect with any other premises, unless by the common areas of the building (stairs, entry, etc.).

[p. 18]

2. The premises should be independent, i.e., it should possess an independent entrance to the outside, without it being necessary to cross any other premises occupied by others, either directly or through common areas of the building, to exit the dwelling.

3. The premises must be used for living; you will keep track of the present layout of the premises and not of the intended layout of the building. Thus, you will not establish a housing form for previous dwellings which have been completely modified as (or used as) offices, workshops, etc. However, you will establish a housing form for makeshift accommodations (building type 2 on question 1 of the building questionnaire) which serves as a shelter for a person, a household or a family, lacking any other residence.

Remarks.

You will keep track of the present layout of the premises and not the intended layout (while being built).

For example, if 2 dwellings have been joined by opening a passage between the two to make an apartment inhabited by a single household, you will establish only one housing form.

However, you will establish 2 housing forms when 1 dwelling has been divided into 2 independent parts (each part possessing its own individual access, with any passage between the two having been blocked and each part inhabited by separate groups of people).

Important Special Case

There are instances where 2 households, using the meaning that one normally gives to the term (1) live together in the same dwelling and share certain facilities (kitchen, toilet, etc.).

In such a case, you should establish a single form (since it is a question of a housing form).

This case presents itself notably when one non-independent part of a dwelling is rented, sublet or lent to tenants, sub-tenants, lodgers or other people lodged there. This part will not be subject to [faire l'objet de] a separate housing form. The people lodged in these conditions will be written down on list A (page 2 of the form) of the landlord after the persons of his/her household, even if they take their meals at another location.

#### 4.2.2 Page 1 of the Housing Form

Before dropping off the housing form, you will need to fill in the lower box on page 1 yourself (except the number of #2 forms collected).

If the building includes several dwellings, you should indicate precisely their location in the building. Particularly, in the case of buildings with several levels, specify,

- If necessary, the stairway;
- In all cases, the floor;
- If necessary, the dwelling number marked on the door;
- or, lacking all else, the status on the landing (when getting off the elevator, or stairways if there is not elevator).

You should classify each dwelling in one of the categories 1 through 7. Read carefully the following directions, which will clarify for you the idea of lodging [logement] in some specific instances.

The first 5 housing categories are related to "principal residences." When people have several residences, their principal residence is the one where they spend most of the year.

Category 2 - Assisted Living [Logement- foyer pour personnes âgées]

Assisted living for the elderly is positioned halfway between collective housing [hébergement collectif] (retirement home, hospice) and single housing.

Such dwellings are normally found in establishments which provide optional collective services (communal restaurant) to people lodged there (normally able-bodied), while allowing for independent living. Such lodgings should also fulfill the following conditions:

- Be occupied by persons older than 60 years of age,
- Be equipped with at least one facility for cooking

[Footnote] (1) A group of persons living together (for example, taking their meals together) is often designated as a household. And, in an even more restrictive sense, household is sometimes synonymous with couple.

[p. 19]

Category 3 - Independent Rooms Rented, Sublet, or Lent to Individuals.

Some dwellings sometimes have an independent annex, i.e., it gives access to the outside, either directly or through common areas of the building, without it being necessary to cross the premises occupied by other people. This is the case, for example, of dwellings which have a maid's room located on another floor (which is common in the Paris metropolitan area).

If the owner of the main lodging has such an annex for himself (to house a member of the family, a servant, etc.) or if the independent room is unoccupied at the time of the census, it is not necessary to establish a separate housing form for it.

If, however, the annex is rented, sublet or lent to individuals, you should establish a separate form by checking off box 3 in the lodging category and adding the name of the owner of the main lodging (this information will eventually allow the main dwelling and its annex to be considered as a separate dwelling for certain uses of the census).

Category 4 - Furnished Room in a Hotel, a Furnished Room, etc.

Some clients of these establishments reside there most of the year (for example, students who live most of the school year in a hotel room); others don't have another residence.

In such cases, you will establish a housing form for each room (or, possibly, apartment) occupied by a single household or a person living alone.

For rooms which are occupied by transient clients, a housing form is not established (see the second part of the manual, paragraph A.1.1).

Category 5 - Make-shift Housing or Temporary Construction Used as Dwelling

This category will of course be used for all principal residences of a type 2 building (question 1 on the building questionnaire).

You will likewise classify an improvised shelter in a location not suited for lodging (cellar, attic, barn, shop, workshop, etc.) located inside of an ordinary building.

Specify fully the nature of the locale.

Category 1 - Ordinary Lodging

This category includes all dwellings except the exceptional cases listed in categories 2 and 5, provided that they are occupied as a principal residence. This is the category that you will most often encounter.

Category 7 - Secondary Residence

This category includes all ordinary dwellings used as secondary residences: country homes, villas, vacation housing, etc.

You will also classify in this category furnished dwellings or apartments, rented or for rent during the tourist season at seaside and winter resorts, spa towns [stations climatiques], etc., as well as apartment-type hotels ["résidences hoteliers"] and other types of "unmarked accommodations" [hébergements banaliss] (see these terms in the alphabetical glossary.)

Note

A dwelling used as a secondary residence must obviously be the subject of a housing form. However, personal forms should not be established for those people who may be occupying it when the census takes place. Indeed, these people are already in list A in the housing form established at the site of their principal residence, i.e., where they normally live.

The only exception is when these people may be away from their customary place of residence when the census is taken and where no one can fill out their forms in their stead. In this case, you will consider them as transient and you will classify their personal forms collected as such in folder # 20, verifying that no one has been listed on list A in the housing form established for the secondary residence.

Category 6 - Vacant dwelling

This category includes ordinary vacant dwellings, i.e., unoccupied as either a principal or secondary residence.

Normally, such dwelling is available for sale or rent, but not necessarily. For example, mark box 6 for a new dwelling, already allotted but not yet occupied by its renter or owner. In this case, do not establish a personal form for the future occupants.

[p. 20]

Notes on Dwelling Categories 6 and 7

For vacant dwellings and secondary residences:

- Write out in full at the top of page 1 of the housing form, the notice "vacant dwelling" or "secondary residence."
- Fill out page 4 of the form as well as you can (except questions 4, 5 and 12) with the help of the information that you are able to gather from neighbors or the town hall;
- No one should be written down on lists A and B; cross out pages 2 and 3
- There should be no personal form filed in the housing form.

Category 8 - RV's, Campers, Mobile Homes

This category comes under the special case of the fixed-date March 4, 1982 census (see the 2nd part of the manual, paragraph A.1.3).

Please Note:

In the collection phase, as with the building questionnaire you should not fill out the boxes related to the district, building and dwelling numbers at the top of page 1.

Question 9: Central Heating

1.- The case of cooperative housing [immeubles collectifs].

Cooperative housing is said to have a shared heating plant when it is fed, in most of the dwellings, by a single source of heat (a boiler, for example); buildings having integrated electric heat or forced- air heat [chauffage central par air puls] are considered in the same way.

[p. 17]

As for the source of shared heat [chaleur commune] it can be:

- The building's own heat. In this case, check off box number 3;
- Common to a group of buildings (generally neighboring buildings): in this case, check off box number 2 ;
- Common to a large number of buildings scattered throughout a common area depending on a common or inter- municipal establishment: in this case, check off box number 1.

Check off box number 4 in all other cases, even if it is a cooperative building in which most of the dwellings have individual central heating.

2. The case of single family houses

For a single family house with central heat, check box number 3.

However, if the heating for a group of single family houses is provided by collective heat (other than urban heat) check box 2.

3. If you have checked boxes 2 or 3 of the main question (whether it be related to a cooperative building [immeuble collectif] or a single family house, don't forget to specify the fuel used.

2. \_\_\_ Write down, if there is space, the number of rooms in the dwelling exclusively for professional use. (for example: businessman's office, doctor's or lawyer's office, apartment workshop, etc.)

3. \_\_\_ Number of living spaces resided in not including the kitchen or rooms exclusively for professional use.

Count as living spaces rooms such as: bedroom, dining room, living room, etc. whatever their surface area, as well as maids' rooms and attic garrets.

Do not count as living spaces rooms such as: kitchen, hall, bathroom, alcove, laundry room, etc.

Special case of independent rooms (for example: maid's rooms separated from the dwelling):

Count these rooms among your living spaces if you use them yourself (either for housing a member of your household: a child, a servant, etc.; or as a storage space, etc.).

Do not count them if they are rented, sublet or leased to other people. In this case, they constitute, in the definition of the census, a distinct dwelling and their occupants will fill out a distinct dwelling form.

### Description

MOMLOC is a constructed variable that indicates whether or not the person's mother lived in the same household and, if so, gives the person number of the mother (see PERNUM). MOMLOC makes it easy for researchers to link the characteristics of children and their (probable) mothers.

The method by which probable child-mother links are identified is described in PARRULE.

The general design of MOMLOC and other constructed variables follows the methods developed for IPUMS-USA "Family Interrelationships," but the details vary significantly.

Note: MOMLOC identifies social relationships (such as stepmother and adopted mother) as well as biological relationships. The variable STEPMOM is designed to identify some of these social relationships.

#### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-52

Valid cases: 0  
Invalid: 0

#### Description

PARRULE describes the criteria by which the IPUMS-International variables MOMLOC and POPLOC linked the person to a probable mother and/or father.

IPUMS-International establishes child-parent links according to five basic rules, and PARRULE gives the number of the rule that applied to the link in question. A link to any parent automatically generates a second link to that parent's spouse or partner, so only one rule is needed to describe both MOMLOC and POPLOC.

The design of the interrelationship variables is described in this paper on IPUMSI family linking methodology.

#### Description

STEPMOM indicates whether a person's mother, as identified by MOMLOC, was most probably not the person's biological mother. Non-zero values of STEPMOM explain why it is probable that the person's mother was a step- or adopted mother. A value of 0 indicates no likely stepmother because (1) the mother identified in MOMLOC was probably the biological mother or (2) there is no mother of this person present in the household.

The codes for STEPMOM are as follows:

- 0 = Biological mother or no mother of this person present in household.
- 1 = Mother has no children borne or surviving.
- 2 = Child reports mother is deceased.
- 3 = Explicitly identified relationship (stepchild, adopted child, child of unmarried partner, stepchild/child-in-law).
- 4 = Mother reports no children in the home.
- 5 = Age difference between mother and child was less than 12 or greater than 54 years.
- 6 = Child exceeds known fertility of mother.

See PARRULE for a description of the linking process.

Users should note that there are many stepmothers and adopted mothers in the population that cannot be identified with information available in the censuses. Therefore, STEPMOM will always under-represent their actual number in the population.

#### Description

STEPPOP indicates whether a person's father, as identified by POPLOC, was most probably not the person's biological father. Non-zero values of STEPPPOP explain why it is probable that the person's father was a step- or adopted father. A value of 0 indicates no likely stepfather because (1) the father identified in POPLOC was probably the biological father or (2) there is no father of this person present in the household.

The codes for STEPPPOP are as follows:

- 0 = Biological father or no father of this person present in household.

## Man with more than one wife linked (POLYMAL)

File: FRA1982-P-H

### Overview

Type: Discrete  
Format: numeric  
Width: 1  
Decimals: 0  
Range: 0-1

Valid cases: 0  
Invalid: 0

### Description

POLYMAL indicates if a man had more than one wife linked to him in the constructed IPUMS variable SPLOC -- Spouse's Location in Household.

The point of POLYMAL is to facilitate using SPLOC in samples that identify polygamy. Some statistical matching procedures expect to find only one matching record for each subject record.

## Woman is second or higher order wife (POLY2ND)

### Overview

Type: Discrete  
Format: numeric  
Width: 1  
Decimals: 0  
Range: 0-1

Valid cases: 0  
Invalid: 0

### Description

POLY2ND indicates if a woman was the second or higher order wife linked to a husband in the constructed IPUMS variable SPLOC -- Spouse's Location in Household. The variable does not suggest the actual marital order of wives, only their relative positions in the person order of the household as it was enumerated.

The point of POLY2ND is to facilitate using SPLOC in samples that identify polygamy. Some statistical matching procedures expect to find only one matching record for each subject record.

## Family unit membership (FAMUNIT)

File: FRA1982-P-H

### Overview

Type: Continuous  
Format: numeric  
Width: 2  
Decimals: 0

Valid cases: 0  
Invalid: 0

### Description

FAMUNIT is a constructed variable indicating to which family within the household a person belongs.

All persons related to the household head receive a 1 (see RELATE). Each secondary family or secondary individual receives a higher code. For purposes of FAMUNIT, secondary families are individuals or groups of persons linked together by the IPUMS constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father).

## Number of own family members in household (FAMSIZE)

## Number of own family members in household (FAMSIZE)

File: FRA1982-P-H

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 1-99

Valid cases: 0  
Invalid: 0

### Description

FAMSIZE counts the number of the person's own family members living in the household with her/him, including the person her/himself. These include all persons related to the person by blood, adoption, or marriage as indicated by the census forms or inferred from them.

FAMSIZE is calculated from the units identified in the IPUMS constructed variable FAMUNIT (family unit membership). The primary family is defined as all persons related to the head in the RELATE variable. Secondary families are individuals or groups of persons linked together by the IPUMS constructed pointer variables SPLOC, MOMLOC, and POPLOC (location of spouse, mother, and father).

### Description

EBPLNT1 indicates the NUTS1 region in which the person was born. The Nomenclature of Territorial Units for Statistics (NUTS) is a standard administrative division of the European Union, and was developed by the EU. The European Free Trade Association extends the NUTS system to several additional countries outside of the EU, and they are also incorporated into this variable. NUTS1 identifies the largest territorial units within countries.

EBPLNT1 only identifies regions within the person's country of residence; it does not identify birthplaces of international migrants.

The code labels include the standard code for the NUTS1 system and the name of the NUTS1 region, separated by a slash.

EBPLNT2 indicates the NUTS2 region of Europe in which the person was born. The Nomenclature of Territorial Units for Statistics (NUTS) is a standard administrative division of the European Union, and was developed by the EU. NUTS2 identifies intermediate territorial units: the second level within countries.

EBPLNT2 only identifies regions within the person's country of residence; it does not identify birthplaces of international migrants.

The code labels include the standard code for the NUTS2 system and the name of the NUTS2 region, separated by a slash.

### Overview

Type: Discrete  
Format: numeric  
Width: 1  
Decimals: 0  
Range: 0-9

Valid cases: 0  
Invalid: 0

### Description

EMPSTAT indicates whether or not the respondent was part of the labor force -- working or seeking work -- over a specified period of time. Depending on the sample, EMPSTAT can also convey further information.

The first digit of EMPSTAT is fully comparable, and classifies the population into three groups: employed, unemployed, and inactive. The combination of employed and unemployed yields the total labor force. The second and third digits of EMPSTAT preserve additional information available for some countries and census years but not for others.

Employment status is sometimes referred to in other sources as "activity status".

Decimals: 0  
Range: 1-99

Valid cases: 0  
Invalid: 0

### Description

OCCISCO records the person's primary occupation, coded according to the major categories in the International Standard Classification of Occupations (ISCO) scheme for 1988. For someone with more than one job, the primary occupation is typically the one in which the person had spent the most time or earned the most money.

## Occupation, unrecoded (OCC) File: FRA1982-P-H

### Overview

Type: Continuous  
Format: numeric  
Width: 4  
Decimals: 0

Valid cases: 0  
Invalid: 0

### Description

OCC records the person's primary occupation, classified according to the system used by the respective national census office at the time. For someone with more than one job, the primary occupation is usually the one in which the person spent the most time or earned the most money, although this may not have been explicit in the instructions for a specific census.

To ensure confidentiality, very small occupations are recoded to a residual category indicating the persons had an occupation, but the job title is not identified. The number of cases recoded should be too small to affect analyses.

### Description

## Industry, general recode (INDGEN)

File: FRA1982-P-H

INDGEN recodes the industrial classifications of the various samples into twelve groups that can be fairly consistently identified across all available samples. The groupings roughly conform to the International Standard Industrial Classification (ISIC). The third digit of INDGEN retains important detail among the service industries that could not be consistently distinguished in all samples.

"Industry" refers to the activity or product of the establishment or sector in which a person worked.

### Description

CLASSWK refers to the status of an economically active person with respect to his or her employment -- that is, the type of explicit or implicit contract of employment with other persons or organizations that the person has in his/her job. In general, the variable indicates whether a person was self-employed, or worked for someone else, either for pay or as an unpaid family worker. CLASSWK is related to EMPSTAT, which is used to define the universe in many samples.

Class of worker is often referred to as "status in employment" in other sources.

### File: FRA1982-P-H

#### Overview

Type: Continuous  
Format: numeric  
Width: 8  
Decimals: 2

Valid cases: 0  
Invalid: 0

#### Description

PERWT indicates the number of persons in the actual population represented by the person in the sample.

For the samples that are truly weighted (see the comparability discussion), PERWT must be used to yield accurate statistics for the population.

NOTE: PERWT has 2 implied decimal places. That is, the last two digits of the eight-digit variable are decimal digits, but there is no actual decimal in the data.

### Description

MIGRATEC indicates the person's place of residence at the time of the previous census. The first digit records movement across major administrative divisions and countries. The second digit reports movement across minor administrative divisions, for samples in which that detail is available.

## Educational attainment, international recode [general version] (EDATTAIN)

File: FRA1982-P-H

### Overview

Type: Discrete  
Format: numeric  
Width: 1  
Decimals: 0  
Range: 0-9

Valid cases: 0  
Invalid: 0

### Description

EDATTAIN records the person's educational attainment in terms of the level of schooling completed (degree or other milestone). The emphasis on level completed is critical: a person attending the final year of secondary education receives the code for having completed lower secondary only -- and in some samples only primary.

EDATTAIN does not necessarily reflect any particular country's definition of the various levels of schooling in terms of terminology or the number of years of schooling. EDATTAIN is an attempt to merge -- into a single, roughly comparable variable -- samples that provide degrees, ones that provide actual years of schooling, and those that have some of both. In addition to EDATTAIN, a country-specific education classification is provided which loses no information and reflects the particular educational system of that country (for example EDUCBR for Brazil, EDUCCL for Chile, and EDUCUS for the United States). As always, users can refer to the original education source variables for each sample, if they wish.

Many samples also give single years of schooling completed, recorded in YRSCHOOL. Some samples provide educational information in a form that could not be incorporated into EDATTAIN.

## Educational attainment, Europe (EEDATTAIN)

### Overview

Type: Discrete  
Format: numeric  
Width: 2  
Decimals: 0  
Range: 0-99

Valid cases: 0  
Invalid: 0

### Description

EEDATTAIN records the person's educational attainment in terms of the level of schooling completed (degree or other milestone) for the European samples. The emphasis on level completed is critical: a person attending the final year of secondary education receives the code for having completed lower secondary only -- and in some samples only primary. All education that was relevant to the completion of a level should be taken into account even if it was provided outside of schools and universities.

EEDATTAIN does not necessarily reflect any particular country's definition of the various levels of schooling in terms of terminology or the number of years of schooling. EEDATTAIN is an attempt to merge -- into a single, roughly comparable variable -- samples that provide degrees, ones that provide actual years of schooling, and those that have some of both. In addition to EEDATTAIN, a country-specific education classification is provided which loses no information and reflects the particular educational system of that country.

Hungary 1980 and 1990 also give single years of schooling completed, recorded in YRSCHOOL.

EEDATTAIN has been classified according to the recommendations of the Conference of European Statisticians for the 2010 Population and Housing Censuses. EEDATTAIN presents a less detailed version of EDATTAIN for the European Samples.

## Activity status (employment status), Europe (EEMPSTAT)

File: FRA1982-P-H

### Overview

Type: Discrete  
Format: numeric  
Width: 3  
Decimals: 0  
Range: 0-999

Valid cases: 0  
Invalid: 0

### Description

EEMPSTAT indicates for the European samples whether or not the respondent was part of the labor force -- working or seeking work -- over a specified period of time. Depending on the sample, EEMPSTAT can also convey further information.

EEMPSTAT has been classified according to the recommendations given by the Conference of European Statisticians for the 2010 Population and Housing Censuses. "Employment Status" is referred to as "Activity Status" in the CES recommendations, but the former term is used to maintain consistency with IPUMS practices.

The economically active population constitutes the total labor force: employed and unemployed persons.

### Description

## Status in employment (class of worker), Europe (ECLASSWK)

### File: FRA1982-P-H

ECLASSWK refers in European Samples to the status of an economically active person with respect to his or her employment -- that is, the type of explicit or implicit contract of employment with other persons or organizations that the person has in his/her job. In general, the variable indicates whether a person was self-employed, or worked for someone else, either for pay or as an unpaid family worker.

ECLASSWK is related to EEMPSTAT (employment status), which is used to define the universe for the variable in many samples.

ECLASSWK has been classified according to the recommendations given by the Conference of European Statisticians for the 2010 Population and Housing Censuses. "Class of worker" is referred to as "Status in Employment" in the CES recommendations. The former term is used to maintain concordance with IPUMS practice.
