National Panel Survey 2010-2011 (UNPS 2010-11)

Overview	
Type	Living Standards Measurement Study [hh/lsm]
Identification	UGA_2010_UNPS_v02_M
Version	Production Date: 2010-10-01 Notes Version 02 (March 2022) Version updated to include consumption aggregate dataset pov2010_11.dta
Series	The 2010/11 Uganda National Panel Survey (UNPS) was the second survey that the Uganda Bureau of Statistics conducted in a series of household surveys that started in 1988. The data was a main source of statistical information for monitoring changes and transitions in poverty dynamics, trends and related welfare indicators. The 2010/11 was the second Wave of the UNPS and was undertaken from November 2010 to October 2011 using the 2005/06 UNHS as its baseline.
Abstract The Uganda National Panel Survey (UNPS) was carried out to collect high quality data on key outcome indicators such as poverty, service delivery, employment and to monitor government's development programs like the National Development Plan (NDP) on an annual basis. The 2010/11 survey collected information on socio-economic characteristics at household, individual and community levels. The UNPS 2010/11 was comprised of six modules: the Socio-Economic, Woman, Agriculture, Fisheries, Community and Market Price modules. The survey covered 3,200 households that were scientifically selected and followed for re-interview in 2009/10 and 2010/11. The objectives of the survey were: 1) To provide information required for monitoring the NDP and other development objectives like the JAF, MDGs as well as specific programs such as the National Agricultural Advisory Services (NAADS) among others. 2) To provide high quality nationally representative information on income dynamics at the household level as well as annual consumption expenditure estimates to monitor poverty in years between Uganda National Household Surveys (UNHS). 3) To supply regular data on agriculture in order to characterize and monitor the performance of the agricultural sector.

Sampling
Sampling Procedure The 2010/11 UNPS survey maintained the 2009/10 UNPS sample design where all the households that were sampled for Wave I (2009/10) were tracked and re-interviewed in Wave II (2010/11). Out of the 7,400 households interviewed during the UNHS 2005/06, 3,200 households were selected for the UNPS and the same sample was maintained in both 2009/10 and 2010/11 Panel surveys. During data collection, the population of persons interviewed in Wave II was slightly higher than that of Wave I due to the following reasons: 1. About 20 households that had initially been missed in Wave I were found and successfully interviewed in Wave II. 2. Changes in household composition contributed to the increase in the number of persons that were added to the panel. Most importantly, if a household member split-off from his/her original household (e.g. children leaving home to set up their own household, or a couple separates), all the new households were included/ joined the panel. Inclusion of split-offs was the main way in which panel surveys, maintain sample representativeness over the years. The new households formed are known as Split-off households while the individuals are termed as Movers.
