Sampling

Sampling Procedure

The recruitment of respondents was conducted on a rolling basis, with the project team periodically contacting the 11 PPTKIS (Privately-owned Indonesian Manpower Placement Company) to obtain lists of workers originating in the Greater Malang and Blitar districts who were recruited by these companies to work abroad. The PPTKIS selected workers who were either staying in their dormitory facilities while undergoing training, or otherwise lived close by. These PPTKIs recruit both males and females, but the males typically do not come and stay in dormitory accommodation, so males were only selected if they lived nearby. They did not screen workers for interest in participating in training, so the workers should be considered as broadly representative of Indonesian female migrants. Researchers set a target sample size of 400 households, and continued to collect workers in batches from these recruiting agencies until this target had been met.

As batches of worker names were received from the PPTKIS, they were entered by project staff onto an Excel worksheet in the order listed by the PPTKIS, and a random number generator used to assign individuals to a treatment status. Since batches of workers were often not of size divisible by four, and were of varying numbers, and that the only information available on the workers was basic data supplied by the PPTKIS, the research team did not stratify the randomization. The sample of 400 migrant workers was randomly assigned into one of the following groups:

- Treatment A: Financial literacy training is provided to the migrant worker only
- Treatment B: Financial literacy training is provided to the migrant worker's household member only
- Treatment C: Financial literacy training is provided separately to both the migrant workers and to their household members
- Group D: Control group with no financial literacy training provided

Out of the sample of 400 migrant workers, this random assignment resulted in 101 migrant households being assigned to treatment A, 97 - to treatment B, 98 - to treatment C, and 104 - to a control group.

DATA COLLECTION NOTES

The financial training program worked with 400 Indonesian migrant workers and their households. Almost all of the workers were women, about to go abroad to work as housemaids in Hong Kong, Malaysia, Singapore, and Taiwan. Before they go abroad, their recruiting agencies typically provide some training on job-related matters. The training consisted of 2 days (18 hours) for the migrant worker and/or 2 half-days (8 hours) for their family member. Training covered financial planning and management, budgeting, savings, debt management, sending and receiving remittances, and understanding insurance, all adapted to the local context. Training was designed to be participative, interactive, and applied, and included comic books, brochures, and budget templates. Attendance was high, with 76-91% of those invited attending.

The baseline surveys were conducted on a rolling basis from February to June 2010 to coincide with the training cycle. The baseline survey was directed at the family member of the migrant who would be responsible for receiving remittances and for household decision-making in their absence. In cases where the family member attended training, interviews were done at the training location prior to the commencement of training. For the control group, migrant-training only group, and cases in the other treatments where the family member was invited but didn't show up for training, interviews were done at the dwelling of the household.

Three rounds of follow-up surveys were conducted via in-person interviews. The first follow-up survey took place in March 2011 and interviewed 392 of the 400 households (98%). The second follow-up survey took place in September 2011, and successfully re-interviewed 376 of the 400 households (94%). The third and final follow-up survey took place in January 2012 and interviewed 365 households (91%).

The follow-up surveys were aimed at the family member in charge of receiving remittances and making financial decisions in the household, and effort was made to re-interview the same member each follow-up round.

Pre question

We are conducting a follow-up survey to understand how households in Indonesia operate in the absence of a migrant worker, and the way your household manages its finances. Even if your household does not currently have an overseas worker, it is important for our study to hear from you. Any information that you give will be treated confidential and will not be shared to other parties. Thank you for your cooperation.

Ida Rohayati is a tailor in Sidorahayu village. Each week she makes Rp. 300,000 from her work. She also sells the scraps from her work, for this she earns Rp. 40,000 each week. Each month Ida must pay Rp. 200,000 for the rent of her shop. She also spends Rp. 40,000 per week on her food and household goods. In addition to this she spends about Rp. 10,000 per week on tea and snacks. She must pay Rp. 100,000 each month for the education expenses of her children. Some time ago, Ida took a loan to purchase her sewing machine. She pays an installment of Rp. 50,000 each week for this loan. She also pays Rp. 30,000 per month for a health insurance policy.
