Sampling

Sampling Procedure

The Farmer-Based Organization (FBO) Survey covered farmers in three (3) Millennium Development Authority (MiDA) operational zones and the sample was selected in two (2) stages. In the first stage, FBOs were selected within each zone. MiDA made 600 FBOs available to the survey group, all of which were used in the sample. FBOs were randomly assigned to either receive the early trainings (Batch I) or the late trainings (Batch II). In the second stage, five (5) farmers were selected from each of the the 600 FBOs. Each batch contained approximately 3,000 farmers and 6,000 farmers in all were interviewed.

Deviations from Sample Design

Researchers noted that there seemed to have been some level of contamination of the control group -- a problem that the farmers in the southern zone raised. There were two sources of this contamination. One was from the control farmers attending training sessions meant for the treatment group. The other source was engendered by the situation where farmers who got the training went around to their colleagues in the control group (who may have been part of some "original" groupings) and taught them what they had learned. Whereas the first was an implementation challenge, researchers noted, the second reflects positive spillovers of the training.
