Sampling

Sampling Procedure

Two samples were used in Crisis Monitoring Survey: main sample and booster sample.

The main sample was created in two stages.

First, the population was stratified by district (NUTS 3) and type of settlement. In Bulgaria, there are 28 administrative districts. For the type of settlement three categories were defined - rural, urban (with population under 50,000) and metropolitan (with population over 50,000). Bulgaria's capital, Sofia, is include in the metropolitan category. In this way $28 \times 3 = 84$ categories (strata) were defined and proportional allocation was made. The method of selecting settlements from each stratum is simple random sampling with replacement, weighted by the number of households in the settlement.

In the second stage, voting stations were chosen in each settlement. Voting stations were used as a type of cluster. Voting stations were selected with probability proportional to the number of voters in each station. In each cluster, (voting station), 20 household addresses were randomly selected from the list of all addresses in the station. The first 10 addresses, which had to be visited mandatorily, formed the main list. If there was a refusal in a household of the main list, this household had to be replaced with an address from the list of reserves (the last 10 addresses).

For the Roma booster sample, an expert database was used. It contained basic information for all segregated neighborhoods in the country like locality (district, municipality and settlement), an experts' approximation for the number of population, number of households, number of houses and other characteristics. The planned booster size sample was 300 households. Simple random sampling without replacement was used in segregated neighborhoods, weighted by their population. In this way, 30 segregated neighborhoods in 20 districts were selected. In each district, 10 randomly sampled households had to be interviewed. GPS sampling was used to identify households in each cluster.

In the second round, six months later, all the 2,384 households in the main sample were visited again whether or not they agreed to take place in the survey again. To complete the list with households from second round to 2,400, some additional addresses were drawn out in the same sampling procedure, in the same clusters as in the first round. Therefore, in the second round, there were two types of households, taking place in the survey: first, these who were interviewed in the both rounds; second, these only from the second round (additional ones).

Response Rate

In the second round, all 2,384 households from the first round were visited again. From this sample, 1,852 households (78 percent of the original respondents) were interviewed. The remaining 22 percent were completed with new addresses and each household that was not interviewed was replaced with a new one in the same cluster.

Weighting

Detailed information about weighting procedures is available in the document "Sample Design and Weighting Procedures for Bulgaria Crisis Monitoring Survey (CMS) and the Bulgarian Longitudinal Inclusive Society Survey (BLISS)" in Related Materials.

Questionnaires

Overview

The survey collected information about household demographics (roster), labor market participation and earnings, housing, durables, access to and receipts of social protection programs, informal safety nets and remittances, other income, credit, self-reported impact of the crisis, coping and mitigation mechanisms.

The Bulgaria Crisis Monitoring Survey combines modules that have been used in crisis surveys in a number of countries (including crisis-specific labor, credit, and coping strategies modules) with uniquely detailed modules on income and social assistance.

Original probability score (ps)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous	Valid cases: 4906
Format: numeric	Invalid: 22
Width: 17	Minimum: 0.3
Decimals: 0	Maximum: 1
Range: 0.327607125043869-0.978015959262848	

Imputed probability score (ps2)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous	Valid cases: 4928
Format: numeric	Invalid: 0
Width: 17	Minimum: 0.3
Decimals: 0	Maximum: 1
Range: 0.327607095241547-0.978016018867493	

Number of household members older than 18 years old in CMS1 (num_hhm_18more_1)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Discrete	Valid cases: 4928
Format: numeric	Invalid: 0
Width: 1	
Decimals: 0	
Range: 1-6	

Cluster component of baseline weight for CMS1 (Weight_cluster_component_ms)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous	Valid cases: 4928
Format: numeric	Invalid: 0
Width: 16	Minimum: 1522.9
Decimals: 0	Maximum: 4963.7
Range: 1522.85327148438-4963.67236328125	

Baseline weight for individuals, CSM1 main surveyent (wt_CMS1_baseline_ms_ind)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous	Valid cases: 4928
Format: numeric	Invalid: 0
Width: 16	Minimum: 333.3
Decimals: 0	Maximum: 4963.7
Range: 333.318389892578-4963.67236328125	

CMS2 ms panel weight for individuals, before population adjustment (wt_CMS2_ms_panel_ind)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous	Valid cases: 4928
Format: numeric	Invalid: 0
Width: 16	Minimum: 400.1
Decimals: 0	Maximum: 6973
Range: 400.117889404297-6972.97509765625	

Final population adjustment factor (Adj_CMS2_ms_panel_ind)

File: wt_cms2_ms_panel_ind_v2

Overview

Final population adjustment factor (Adj_CMS2_ms_panel_ind)

File: wt_cms2_ms_panel_ind_v2

Type: Continuous
Format: numeric
Width: 17
Decimals: 0
Range: 0.697333991527557-1.69655001163483

Valid cases: 4928
Invalid: 0
Minimum: 0.7
Maximum: 1.7

Final weight for CMS2 ms panel, after adjustment (wt_CMS2_ms_panel_ind_final)

File: wt_cms2_ms_panel_ind_v2

Overview

Type: Continuous
Format: numeric
Width: 16
Decimals: 0
Range: 385.600006103516-7033.25

Valid cases: 4928
Invalid: 0
Minimum: 385.6
Maximum: 7033.3
