#### DATA COLLECTION NOTES

Much effort was put into the wording in order to adapt the survey to local and cultural contexts. A team of researchers from the Catholic university of Bukavu, IPSOS and the World Bank worked together to finalize the questionnaire instrument, which was then piloted prior to the survey.

Enumerators were recruited based on their past experiences in conducting survey and their ability to implement the survey in local languages.

All field staff received training on data collection. This consisted of instructive lectures and demonstrations followed by practice sessions with non-sampled cross-border traders, and a final special briefing about different field techniques. The enumerator teams were led by supervisors and controllers. They were selected among the most experienced enumerators.

A team of researchers from the Catholic University of Bukavu, IPSOS and the World Bank closely monitored all the field activities through frequent visits for spot checking. They revisited random sub-sample of the respondents, called back the respondents for verification of information, and checked completed questionnaires for consistency. During their visits, assistance and guidance were provided to enumerators and their supervisors where needed.
