Sampling

Sampling Procedure

The LFS is a nationally representative survey, relying on a stratified cluster sample with oversampling in urban areas. It covered 280 enumeration areas (EAs) or clusters, with 15 households selected in each for a total of 4,200 households. SSL conducted the sampling using the 2004 Population and Housing Census as the sampling frame.

In the Sierra Leone Population and Housing Census (SLPHC 2004), the labor underutilization rate was estimated at 27.5%, which at the time was considered one of the most important indicators to be produced from a labor force survey in an economy such as that in Sierra Leone.

The target number of households in the sample, i.e. the sample size, was thus estimated at 4,200, based on the computed value of 4296 rounded down to 4200 for ease of use and due to budget constraints.

However, due to the Ebola outbreak, which began in the final stages of data collection, four selected EAs were quarantined in Kailahun district, Eastern region, immediately prior to the data collection. These EAs were replaced with new EAs randomly selected following the same methodology used to select the original EAs. In addition, one additional cluster was quarantined in Bombali, Northern region (EA 210706081), and it was not possible to replace this cluster using the same randomization methodology as this occurred during the data collection. As a result, this cluster was excluded in conducting the data analysis.

Response Rate

Non-response rate was 1.5 percent, which is low, in particular in view of the difficulties encountered by the field teams caused by the early cases of the Ebola virus.

Weighting

Sampling weights for the LFS households were calculated using the following formula:
Household weight = 1/ the probability of EA being selected within strata*the probability of household being selected within the EA

Questionnaires

Overview

The survey instrument is divided into two parts, Part I - Labor Force Survey, and Part II - Non-Farm Enterprises and Farming Activities, as follows:

Part I
SECTION A. Household listing and demographic information
SECTION B. Education, training, and migration
SECTION C. Current economic activity – screening form
SECTION D. Unemployment or inactivity
SECTION E. Current main economic activity
SECTION F. Current secondary economic activity
SECTION G. Usual economic activity
SECTION H. Industrial relations and occupational injuries
SECTION I. Time-related underemployment and inadequate employment situations
SECTION J. Other activities and time use

Part II
SECTION K. Family/household non-farm enterprises
SECTION L. Farming activities

Part I was administered to all LFS eligible individuals, with the exception of Section J, covering other activities and time use, which applied to those ages five and above. Part II of the questionnaire was applied to the head of household only.

DATA COLLECTION NOTES

The survey field team consisted of four regional coordinators and nineteen field teams, with each team comprised of three enumerators and one supervisor. The questionnaire was administered face-to-face. Field teams were provided a list of 15 selected households and 10 replacement households for each enumeration area. Replacement households were only interviewed if the selected household was unavailable for interviewing or if, after repeated efforts made by the enumerator and supervisor, was unwilling to participate in the survey.

A series of quality control measures were put in place to ensure survey data quality. First, after the interview process was conducted by enumerators, supervisors were responsible for reviewing and editing all questionnaires administered to minimize errors of omission, legibility, and inconsistency across sections and questions. Second, supervisors gave daily updates of their team's progress via SMS to the regional coordinators. SMS messages reported key facts for monitoring progression such as date, cluster number, questionnaires edited and completed by the supervisor, total number of households replaced, number of surveys completed by enumerator, and whether the team faced unexpected issues affecting the data collection. Finally, regional coordinators carried out spot and backup checks for quality control using smartphone-based tools to check the quality completed questionnaires and cross-check key information through short follow up interview with a subsample of respondents.
