Sampling

Sampling Procedure

Un échantillon national de 7 159 ménages a été sélectionné. L'échantillon est stratifié de façon à fournir une représentation adéquate des milieux urbain et rural ainsi que des 12 domaines d'étude, constitués des 12 départements du pays, pour lesquels une estimation est disponible pour tous les indicateurs clés.

L'échantillon est basé sur un sondage à deux degrés. Au premier degré, on a tiré 241 grappes (dont 100 en milieu urbain, 48 en semi-urbain et 93 en milieu rural) ou Zones de Dénombrement (ZD) sur l'ensemble du territoire national à partir de la liste des ZD établie lors du Recensement Général de la Population et de l'Habitation (RGPH) de 2007. Les ZD ont été sélectionnées en procédant à un tirage systématique avec probabilité proportionnelle à leur taille, celle-ci étant le nombre de ménages de la ZD. Un dénombrement des ménages dans chacune de ces grappes a fourni une liste actualisée de ménages à partir de laquelle a été tiré, au second degré, l'échantillon de ménages (24 ménages par ZD en milieu urbain et 34 ménages par ZD en milieu rural) par tirage systématique à probabilité égale. Tous les hommes et toutes les femmes âgés de 15-49 ans vivant habituellement dans les ménages sélectionnés, ou présents la nuit précédant l'enquête, étaient éligibles pour être enquêtés et pour participer au test du VIH.

Questionnaires

Overview

Deux types de questionnaire ont été utilisés au cours de l'ESISC-I : le Questionnaire Ménage et le Questionnaire Individuel. Le contenu de ces documents est basé sur les questionnaires modèles développés par le Programme DHS dans le cadre des Enquêtes sur les Indicateurs du Sida (AIDS Indicator Surveys – AIS).

Le Questionnaire Ménage a été utilisé pour lister tous les membres habituels et les visiteurs des ménages sélectionnés. Un des objectifs essentiels du Questionnaire Ménage est d'identifier les femmes et les hommes éligibles pour des interviews individuelles et pour le test du VIH et de collecter certaines informations de base sur les caractéristiques sociodémographiques de chaque personne. Le Questionnaire Ménage a également permis de collecter des informations sur les caractéristiques du ménage, comme la principale source d'eau de boisson, le type de toilettes, le type de matériau du sol et du toit du logement, la possession de certains biens durables, etc.

Le Questionnaire individuel a été utilisé pour collecter des informations sur tous les hommes et toutes les femmes âgés de 15 à 49 ans. Les questions portent sur des sujets très variés tels que :

- les caractéristiques sociodémographiques des enquêtés ;
- l'état matrimonial et l'activité sexuelle ;
- les connaissances et attitudes vis-à-vis du VIH/sida et des autres infections sexuellement transmissibles (IST).

Data Processing

Data Editing

En ce qui concerne le traitement des données, une formation d'une semaine a été organisée pour deux superviseurs, deux directeurs de bureau, 10 opératrices de saisie et un agent chargé de l'édition secondaire des données. Cette équipe de 15 personnes a effectué l'ensemble du traitement des données. La saisie a commencé le 28 mars et a pris fin le 30 juin 2009. Toutes les 240 grappes ont été finalisées, c'est-à-dire que les données ont été entrées en saisie principale, en double saisie puis corrigées, dites et sauvegardées.

Dès que le traitement des données des interviews a été achevé, et conformément au protocole d'enquête, les supports de collecte ont été détruits le 30 juillet 2009 l'incinérateur du LNSP et les tests de dépistage du VIH ont démarré le même jour. Les résultats de la séroprévalence ont été disponibles le 26 août 2009.
