Sampling

Sampling Procedure

La procédure d'échantillonnage retenue pour l'ENPS est un tirage aléatoire, stratifié deux degrés. Au premier degré de sondage, 150 grappes (62 grappes en milieu urbain et 88 grappes en milieu rural) ont été sélectionnées en procédant à un tirage systématique avec probabilité proportionnelle à la taille; la taille du DR étant le nombre de ménages. Un dénombrement des ménages dans chacune de ces grappes a fourni la liste de ménages à partir de laquelle a été tiré au second degré un échantillon de ménages avec un tirage systématique à probabilité égale. Au second degré de sondage, 22 ménages ont été sélectionnés dans chaque grappe à partir de la liste des ménages dénombrés. Toutes les femmes de 15 à 49 ans, résidentes habituelles ou visiteuses, identifiées dans ces ménages ont été individuellement enquêtées.

Au total, 3 063 ménages et 6 655 femmes âgées de 15-49 ans ont été enquêtés.

Response Rate

98,5% des ménages et 96,4 % des femmes

Questionnaires

Overview

Deux questionnaires ont été développés dans le cadre de l'ENPS : un questionnaire ménage et un questionnaire individuel pour les femmes de 15-49 ans.

Le questionnaire ménage : La page de couverture contient les informations relatives à l'identification du ménage, au résultat de l'interview qui permet de calculer le taux de couverture de l'enquête et aux contrôles de terrain et de bureau. Il a permis de collecter des informations sur les membres habituels du ménage et les visiteurs qui y ont passé la nuit précédant l'interview. Les informations recueillies portent sur le sexe, l'âge, l'état de grossesse pour les femmes de 15-49 ans, l'utilisation de moustiquaires au cours des six derniers mois. Par ailleurs, d'autres informations portant sur les caractéristiques du logement (approvisionnement en eau, type de toilettes, matériau de construction, disponibilité de l'électricité, possession de biens durables, etc.), la possession et l'utilisation et le traitement des moustiquaires. Ces informations sont recueillies afin d'apprécier les conditions environnementales et socio-économiques dans lesquelles vivent les personnes enquêtées. En outre, le questionnaire ménage a permis d'identifier les femmes éligibles pour l'interview individuelle.

Le questionnaire individuel femme : Il constitue l'élément central de l'ENPS, 2006. Il comprend une page de couverture similaire à celle du questionnaire ménage sur laquelle sont enregistrées les informations d'identification du ménage, le résultat de l'interview qui permet de calculer le taux de couverture de l'enquête et les contrôles de terrain et de bureau ainsi que quatre sections qui servent à recueillir des informations sur les thèmes suivants :

- caractéristiques sociodémographiques ;
- historique des naissances des 6 dernières années ;
- grossesse et traitement préventif intermittent ;
- fièvre chez les enfants au cours des deux dernières semaines et traitement.

DATA COLLECTION NOTES

Les questionnaires définitifs ont été traduits dans les quatre principales langues nationales (Wolof, Sérère, Poular et Mandingue). Ces questionnaires traduits ont servi de support pendant la formation théorique et pratique des personnels de terrain.

SUPERVISION

Huit équipes ont été constituées pour le travail de terrain ; chaque équipe était composée de 4 enquêtrices chargées des enquêtes femmes et un chef d'équipe chargé du contrôle de la qualité des données et de la gestion logistique et technique de l'équipe. Le chef d'équipe était responsable des performances de ses équipes ; il gère les ressources de l'équipe et prenait les contacts nécessaires auprès des autorités et des populations. Deux superviseurs ont effectué des visites sur le terrain pour assister les équipes faire face aux problèmes techniques, logistiques et administratives. Ces superviseurs passaient successivement avec chaque équipe le temps nécessaire pour s'assurer que le travail se déroule dans les meilleures conditions.

Data Processing

Data Editing

La saisie et le traitement des données ont été faits en utilisant le logiciel CSPro (Census and Survey Processing System). Six opératrices de saisie ont été sélectionnées pour les travaux de saisie. Elles ont subi une formation de mise niveau de deux jours pour se familiariser avec les questionnaires de l'ENPS. Les travaux de saisie proprement dits ont démarré le 6 décembre 2006 pour finir le 15 janvier 2007.

Deux agents de bureau étaient chargés de la vérification des questionnaires venus du terrain avant de les transmettre à la saisie et de l'édition. Tous les questionnaires ont fait l'objet d'une double saisie pour éliminer du fichier le maximum d'erreurs de saisie. Par ailleurs, un programme de contrôle de qualité permettait de détecter pour chaque quipé et même, dans certains cas, pour chaque enquêtré/enquêtrice, certaines des principales erreurs de collecte. Ces informations étaient immédiatement communiquées aux équipes de terrain lors des missions de supervision, afin d'améliorer la qualité des données.
