Sampling

Sampling Procedure

Indonesia is divided into 33 provinces. Each province is subdivided into districts (regency in areas mostly rural and municipality in urban areas). Districts are subdivided into subdistricts, and each subdistrict is divided into villages. The entire village is classified as urban or rural.

The 2012 IDHS sample was aimed at providing reliable estimates of key characteristics for women age 15-49 and currently-married men age 15-54 in Indonesia as a whole, in urban and rural areas, and in each of the 33 provinces included in the survey. To achieve this objective, a total of 1,840 census blocks (CBs)-874 in urban areas and 966 in rural areas - were selected from the list of CBs in the selected primary sampling units formed during the 2010 population census.

For further details on sample design and implementation, see Appendix B of the final report.

Response Rate

A total of 46,024 households were selected in the sample, of which 44,302 were occupied. Of the households found in the survey, 43,852 were successfully interviewed, yielding a very high response rate (99 percent).

In the interviewed households, 9,442 never-married female and 12,381 never-married male respondents age were identified for an individual interview. Of these, completed interviews were conducted with 8,902 women and 10,980 men, yielding response rates of 94 and 89 percent, respectively. These response rates are higher than those of the 2007 IYARHS, which were 90 and 86 percent, respectively.

Questionnaires

Overview

The 2012 IDHS used four questionnaires: the Household Questionnaire, the Woman's Questionnaire, the Married Man's Questionnaire, and the Never-Married Man's Questionnaire. Because of the change in survey coverage from ever-married women age 15-49 in the 2007 IDHS to all women age 15-49 in the 2012 IDHS, the Woman's Questionnaire had questions added for never-married women age 15-24. These questions had previously been a part of the 2007 Indonesia Young Adult Reproductive Survey Questionnaire. Questions asked of never-married women age 15-24 assessed additional background characteristics; knowledge of the human reproductive system; attitudes toward marriage and having children; the role of family, school, community, and media; use of smoking tobacco, alcohol, and drugs; and dating and sexual activity.

DATA COLLECTION NOTES

Training

A total of 922 persons, 376 men and of 546 women, participated in the main survey training for interviewers. Training took place in 12 days for adolescent's interviewers and in 7 days for never-married men's interviewers, in May 2012 in nine training centers; Batam, Bukittinggi, Banten, Yogyakarta, Denpasar, Banjarmasin, Makassar, Manokwari, and Jayapura. The training included class presentations, mock interviews, and tests. In each training center, the participants were grouped into three different classes, one each for interviewers of women, married men, and never-married men. All of the participants were trained using the Household and Individual questionnaires.

Data Collection

The ARH component of the 2012 IDHS recruited 119 interviewer teams for data collection. Eight interviewers comprised each team: one male supervisor, one female supervisor, a field editor, four female interviewers, and, in addition, one male interviewer/editor for male adolescents, and one male interviewer for currently married men. In Papua and West Papua, each team had five interviewers: one male supervisor (who also served as the interviewer of currently married men and editor of the male adolescent); one female field editor; two female interviewers, and one male interviewer for married men and nevermarried men. Fieldwork took place from May 7 to July 31, 2012.

Data Processing

Data Editing

Data processing activities, which included editing and coding open-ended questions, were carried out by a team of 58 data entry operators, 42 data editors, 14 secondary data editors, and 14 data entry supervisors. Census and Survey Processing System (CSPRO) software was used to process the survey data.

Data Appraisal

Estimates of Sampling Error

Detailed description of estimates of sampling errors are presented in Appendix C of the survey report.
