Overview

ABSTRACT

Between May and August 2017, World Bank in collaboration with South Sudan's National Bureau of Statistics, funded by DfID, conducted the fourth wave of the High Frequency South Sudan Survey to monitor welfare and perceptions of citizens, revisiting urban households visited in Waves 1 and 2. This dataset contains information on security, economic conditions, education, employment, access to services, and perceptions. It also includes comprehensive information on assets and consumption, to allow estimation of poverty based on the Rapid Consumption methodology as detailed in Pape and Mistiaen (2014).

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Household

Coverage

GEOGRAPHIC COVERAGE

Urban areas of seven of South Sudan's ten former states: Western Equatoria, Central Equatoria, Eastern Equatoria, Northern Bahr-El-Ghazl, Western Bahr-El-Ghazal, Warrap and Lakes state.

Sampling

Sampling Procedure

Wave 4 of the High Frequency South Sudan Survey revisited urban households interviewed in Waves 1 and 2. Fifteen urban enumeration areas (EAs) visited in the first two waves were randomly selected from each state, and all of the households interviewed in the selected EAs were to be revisited.

In Waves 1 and 2, the sampling strategy consisted of a stratified clustered design. Within each of the 7 strata (7 states, urban and rural) the primary sampling units are EAs that were drawn randomly proportional to size. Within EAs, a listing was conducted and 12 households were drawn randomly as unit of observation.

Deviations from Sample Design

EAs were replaced if security rendered field work unfeasible. Replacements were approved by the project manager. Households were not replaced and were dropped from the sample after a total of three unsuccessful visits.

Response Rate

N/A

Weighting

The sampling weight is the inverse probability of selection. The selection probability for a household can be decomposed into the selection probability of the EA and the selection probability of the household within the EA. The selection probability of an EA is calculated as the number of households within the EA divided by the number of households within the stratum multiplied by the number of selected EAs in the stratum estimated using the 2008 Census. The selection probability for a household within an EA is constant across households and is calculated as the number of households selected in the EA over the number of listed households in the EA. Sampling weights were then scaled to equal the number of households per strata using the Census 2008 data.

Questionnaires

Overview

The questionnaire comprises the following modules

Module 1: Introduction
Module 2: Administrative Information
Module A: Interview and Household Information
Module B: Household Roster
Module C: Household Characteristics
Module D: Food consumption
Module E: Non-food consumption
Module F: Livestock
Module G: Durable goods
Module H: Wellbeing and Opinions
Module I: Conflict and Displacement
Module J: End of Interview
Module K : Enumerator Feedback

The questionnaire is provided under the Related Materials tab.

Data Collection

Data Collection Dates

Range: 0-1	

Interviewer instructions

Please read this aloud to a knowledgeable adult at the house: "My name is [Say your name], I am working with the High Frequency Survey Team, a research organization that is conducting a study on the ECONOMIC SITUATION of families in South Sudan. Your household has been RANDOMLY SELECTED to take part in this study. Your PARTICIPATION IS COMPLETELY VOLUNTARY. All information you share with me is COMPLETELY CONFIDENTIAL. This means that there will be no way any information or answers you give me can be associated with your name. I also want to make it clear that there are no right or wrong answers. The survey won't provide individual benefits to you, but the information will be used to understand socioeconomic factors that influence poverty and to INFORM DEVELOPMENT POLICIES of local and international organizations to improve the lives of people in South Sudan. To be able to answer these questions accurately, I would like to speak to the head of the household TOGETHER WITH THEIR PARTNER if possible. If they are not available, then I would like to talk to the man or the woman who would know most about what your household usually consumes and purchases. Also, if possible, it would be helpful if another man/woman [someone from the opposite gender] could be present during the interview to make sure the responses represent the whole household." There are NO RISKS to taking part in this study, and your identity will remain ANONYMOUS. You can stop taking part in the survey at any time. Please take as much time as you need to decide if you'd like to participate in this survey. You may ask me any questions about the research project or the survey procedures that you'd like. I will also leave you my phone number in case you have any questions after the interview. I will use this mobile phone, which contains the questionnaire, to write down the answers you give me (show phone to the respondent).

A.4 May I continue the interview? (A_4_maycontinue)

File: hh

Overview

Type: Discrete	Valid cases: 945
