Sampling

Sampling Procedure

Les données de l'ECPSS du Sénégal ont été collectées à partir d'un échantillon de structures de santé. Les structures de santé incluses dans l'échantillon ont été classées en fonction de leur autorité de gestion. Il s'agit des structures publiques, privées, privées sans but lucratif (ONG Entreprises), et privées confessionnelles.

Sur un total de 3 084 structures de santé (dont 86 hôpitaux, 242 centres de santé, 1 250 postes de santé et 1 506 cases de santé), l'échantillon a inclus 50 % des hôpitaux, 50 % des centres de santé, y compris les centres médicaux de garnison (CMG), 20 % des postes de santé, y compris les infirmeries des maisons d'arrêt et de correction (MAC) et des cases de santé liées aux postes choisis.

Cet échantillonnage est similaire à celui de la deuxième année pour les hôpitaux et centres de santé ; par contre, parmi les postes de santé, 30 % ont été visités la deuxième année, le reste étant constitué par de nouveaux postes.

Response Rate

Sur un total de 386 structures sélectionnées pour l'ECPSS 2016, 371 ont été enquêtées avec succès, soit une participation de 96 % et 97 cases de santé sur les 98 liées aux postes de santé sélectionnés, soit un taux de réponse de 99 %.

Les structures enquêtées comprennent 35 hôpitaux, 61 centres de santé, 275 postes de santé et 97 cases de santé rattachées aux postes choisis. Les structures enquêtées appartiennent plus au secteur public (79 %), tandis que le privé ne représente que 21 %.

Questionnaires

Overview

Les outils de collecte utilisés sont basés sur les questionnaires mis au point par le projet The DHS Program et ont été adaptés pour le Sénégal de commun accord avec les services techniques du MSAS avant le démarrage de l'enquête continue en 2012-2013. Pour la quatrième année, des corrections ont été apportées en se basant sur l'expérience des trois premières années mais aussi sur certaines sections en fonction des nouvelles politiques de santé en vigueur dans le pays, comme l'introduction d'un nouveau module sur la santé de la reproduction des adolescents et jeunes (SRAJ). Au cours de l'ECPSS du Sénégal 2016, quatre types d'instruments de collecte des données ont été utilisés.

- **L'inventaire de la structure sanitaire :** L'inventaire de la structure sanitaire est conçu pour obtenir des informations sur la capacité de la structure fournir chacun des services prioritaires. Il rassemble l'information sur la disponibilité d'articles spécifiques (incluant leur localisation et leur état de fonctionnement), les composants des systèmes de soutien (logistique, entretien, gestion) et l'infrastructure de la structure sanitaire, y compris l'environnement de travail où les services sont offerts. Les ressources évaluées sont celles exigées pour fournir le service selon les normes et protocoles internationalement admis. Les services évalués représentent ceux qui sont généralement reconnus comme essentiels pour assurer des services de santé.
- **L'interview des prestataires de santé :** l'interview des prestataires de santé est conçue pour obtenir des informations sur les qualifications individuelles des prestataires, le type de service qu'ils fournissent, le type de formation qu'ils ont reçue.
- **Les listes de contrôle de l'observation :** elles valuent le niveau d'adhésion des prestataires aux standards de qualité des services basés sur les normes et protocoles internationalement et nationalement acceptés. Les composantes de l'observation comprennent le processus utilisé en menant certaines tapes spécifiques telles que les examens physiques et le contenu de l'entretien entre le prestataire et le client (histoire de la maladie, symptômes et conseils). Pour cette quatrième année, les clients des services suivants ont été choisis pour l'observation : consultation prénatale (CPN) et enfants malades.
- **Les interviews de sortie :** les interviews de sortie ont été conçues pour valuer le niveau de compréhension par le client du service offert portant aussi bien sur la consultation, l'examen, que sur les instructions et conseils reçus en rapport avec le traitement ou les mesures préventives. La compréhension des principaux messages par les clients augmente la probabilité de réussite du traitement ou du respect des comportements préventifs, ce qui favorise des résultats optimaux au niveau de leur santé.

Questionnaire spécial pour la case de santé comprenant :

- l'inventaire de la case de santé conçu pour valuer les services spécifiques de la case ;
- la revue des cahiers, registres et documents liés à la PF, la promotion de la croissance, la consultation générale et la maternité ;
- et
- l'interview des prestataires de santé, en utilisant le même questionnaire que pour les autres types de structures.

DATA COLLECTION NOTES

Tous les questionnaires de l'ECPSS ont t pr-tests au cours de la formation initiale en 2012. Pour la quatrieme anne, seule une rvision a t organise du 25 au 31 janvier 2016, pour remettre niveau les agents de terrain, expliquer les nouvelles questions et tester le programme informatique incluant ces nouvelles questions. Tous les neufs enqueteurs faisant partis de l'quipe de terrain ont particip la rvision. Les quipes sont formes d'un chef d'quipe qui collecte aussi les donnees et deux enqueteurs. Chaque quipe est accompagne d'un chauffeur.

La supervision du travail sur le terrain a t coordonne au niveau de l'ANSD et ralise par le mdecin recrut comme coordonnateur technique de l'ECPSS et un ingnieur en informatique avec l'appui du conseiller en EDS continue de l'USAID. Ces trois personnes visitaient les quipes priodiquement et suivaient la qualitt des donnees.
