VERSION DESCRIPTION

- v01: Cleaned, anonymous dataset for Somali regions, South Sudan and Yemen

Overview

ABSTRACT

The Rapid Emergency Response Survey (RERS) 2017 is a pilot project that developed a rapid, low cost methodology using phone interviews to identify critical developmental binding constraints to inform a developmental response to populations in crisis. The RERS was conducted in Nigeria, Somalia, South Sudan and Yemen, where food shortage from a prolonged drought brought large portions of the populations to the brink of famine. These conditions urged a rapid humanitarian short-term response but also requires a developmental intervention to restore assets and create resilience for future shocks. The RERS collects data to inform the developmental response.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

- Households

Scope

NOTES

The scope of the RERS includes:

- Household Information
- Education
- Main Income Source for Household
- Main Employment of Household
- Assets
- Food and Market Access
- Vulnerability Measure: Coping Strategies Index
- Water Access and Quality
- Health

Coverage

GEOGRAPHIC COVERAGE

For the Somali population, pre-war regions declared to be in Emergency or worse are surveyed. This comprises of the regions Bakool, Bay, Bari, Galguduud, Gedo, Hiran, Lower Shabelle, Mudug, Nugaal, Sanaag, Sool, Togdheer and Woqooyi Galbeed.

In South Sudan, former states declared to be in Emergency or worse are surveyed. This comprises of Central Equatoria, Jonglei, Northern Bahr-el-Gazal, Unity, Upper Nile and Western Bahr-el-Gazal.

In Yemen, the survey covers all governorates, stratified into Emergency and non-emergency strata. Governorates classified as 'Emergency' are Abyan, Al Bayda, Hajjah, Lahj, Sa'ada, Sana'a, Shabwah and Taizz. Non-'Emergency' governorates are Aden, Al Dhale'e, Al Hudaydah, Al Mahwit, Amanat Al Asimah, Amran, Dhamar, Hadramaut, Ibb, Marib and Raymah.

UNIVERSE

Households with active phone connections and charged phones in 13 (pre-war) regions classified to be under 'Emergency'.

Sampling

Sampling Procedure

SOMALIA

- Population targeted: Households with active phone connections and charged phones in 13 (pre-war) regions classified to be under 'Emergency' phase as per the IPC.
- Sample structure: 2600 households, stratified by region. A random sample was drawn for each strata based on a sampling frame of phone numbers that responded to a mass text message sent for this purpose.

SOUTH SUDAN

- Population targeted: Households with active phone connections and charged phones in 6 (pre-war) states classified to be under 'Emergency' phase as per the IPC.
- Sample structure: 1200 households, stratified by state. A random sample was drawn for each of the strata using random digit dialing.

YEMEN

- Population targeted: Households with active phone connections and charged phones across all (21) governorates in the country and the capital City, Sana'a.
- Sample structure: 1800 households, stratified by governorate (the capital Sana'a is a separate strata in itself). A random sample -was drawn from each governorate and the capital Sana'a, using random digit dialing.

The sample size of these strata is low and would yield large confidence intervals for the estimates. Thus, for analysis the strata can be grouped into 'analytical strata' as follows:

1. Governorates in emergency or worse as per the IPC.
2. Governorates not in emergency as per IPC.
3. Capital city of Sana'a.

Deviations from Sample Design

In Yemen, three governorates, Al Jawf, Al Maharah and Socotra, could not be reached over the phone, thus they were dropped and the share of planned interviews was evenly spread among other governorates.

Weighting

The sampling weight w is calculated for each strata as follows:

$$w = N/n,$$

where N is the population in the strata, and n is the number of interviews completed in the strata.

Note that the strata are defined slightly differently among the countries, as detailed in Sampling Procedure above. For Yemen, the governorate-level strata are used to calculate the weights.

Questionnaires

Overview

The questionnaire covers modules on income, employment, schooling, market and food access, water and health. Many questions explore changes in these areas over the previous 1 to 12 months, to understand the impacts of the current food security crisis. The questionnaire also includes the Coping Strategies Index (CSI), which measures severity of food insecurity. This index has been used as a measure of household vulnerability, which is correlated against other variables to understand the profiles of households that are most vulnerable.

All questionnaires and modules are provided as Related Materials.
